Quiz

Please close your books, notes, lesson materials, forum and answer these questions <u>in the order</u> shown:

- What is the numeric permission equivalent of rwxr-xr--?
- 2. With a umask of **002** what permissions would a newly created file have?
- 3. Does: **chmod o+w filename** give write permission to the owner or to other users?

email answers to: risimms@cabrillo.edu

(If you are in the classroom you can write your answers on a scrap piece of paper and hand it in)

- [] Has the phone bridge been added?
- [] Is recording on?
- [] Does the phone bridge have the mike?
- [] Share slides, putty (rsimms, simmsben, roddyduk), and
 - Chrome
- [] Disable spelling on PowerPoint

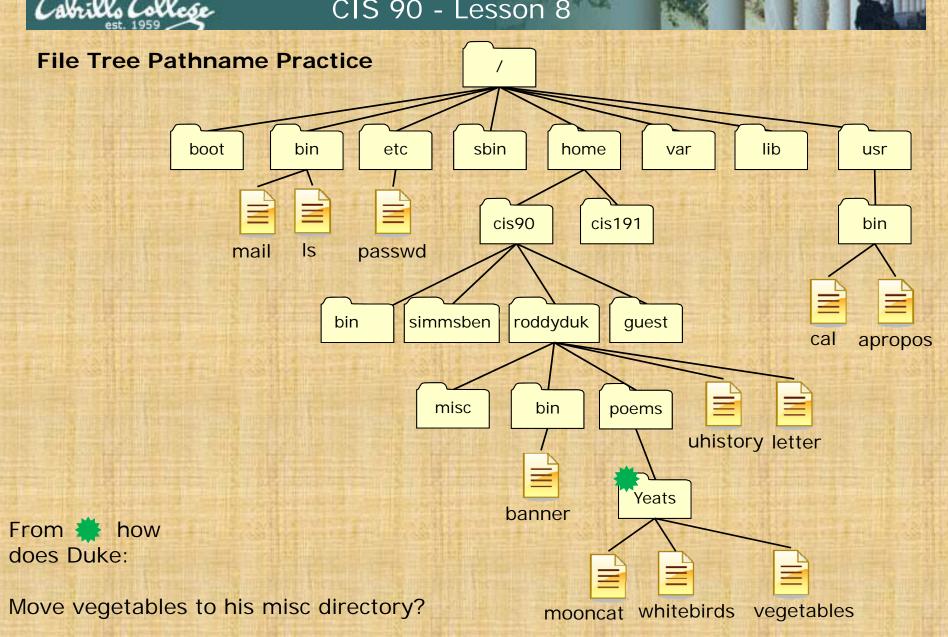

Input/Output Processing

Objectives	Agenda
 Identify the three open files an executing program is given when started. Be able to redirect input from files and output to files Define the terms pipe, filter, and tee Use pipes and tees to combine multiple commands Know how to use the following useful UNIX commands: o find o grep o wc o sort o spell 	 Quiz Questions from last week Review File descriptors Pipelines New commands Tasks using pipelines

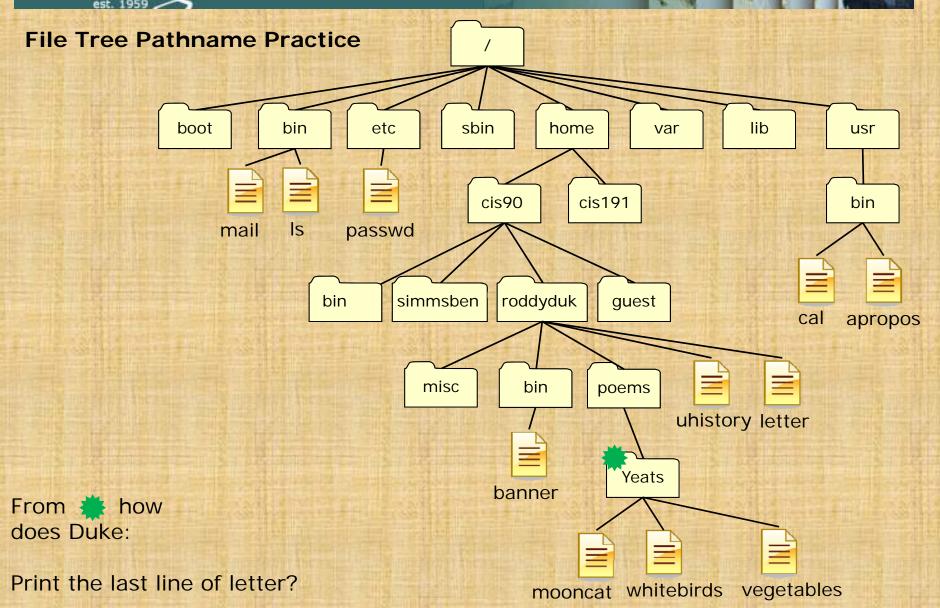

Warmup

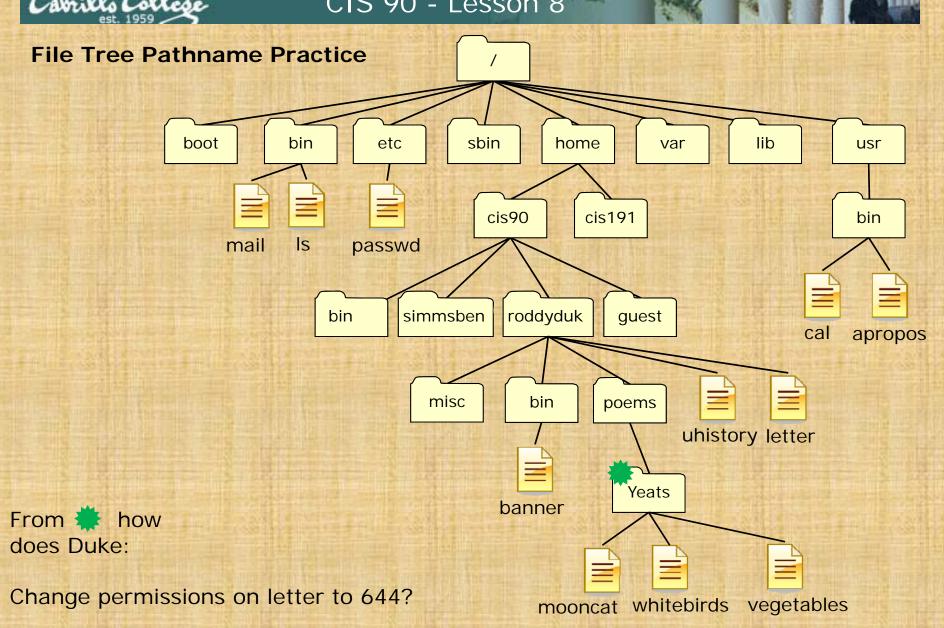

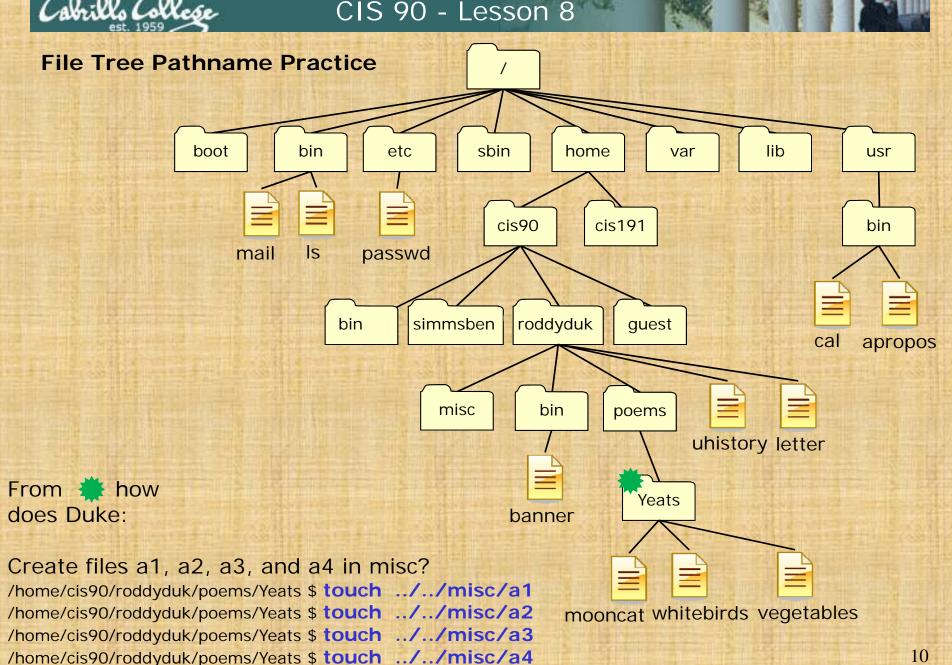

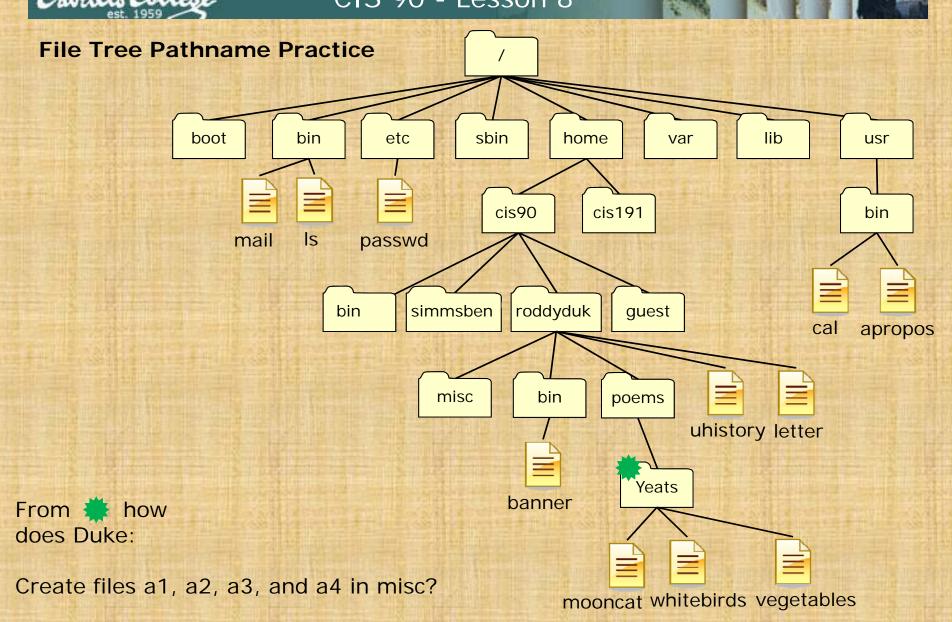

Housekeeping

Previous material and assignment

- 1. Questions?

- 3. Five posts due today
- 4. Excel and grades page
- 5. Review calendar up to next test

Groups and new files

```
/home/cis90/roddyduk $ touch mydogs
/home/cis90/roddyduk $ ls -1 mydogs
-rw-rw-r-- 1 roddyduk cis90 0 Oct 19 13:16 mydogs

When a new file is created:
• the permissions are based on the umask value
```

• the owner is set to the user creating the file -

• the group is set to the user's primary group

Use either id or groups command to determine what groups a user belongs to

```
[rsimms@opus lab06]$ id roddyduk
uid=1201(roddyduk) gid=90(cis90) groups=90(cis90),100(users)
context=user_u:system_r:unconfined_t
[rsimms@opus lab06]$
```

[roddyduk@opus ~]\$ groups roddyduk
roddyduk : cis90 users

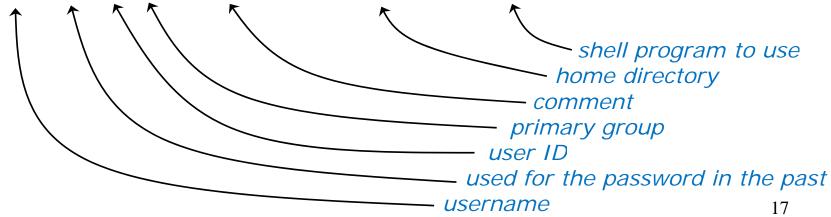

Primary group is cis90. secondary group is users

The user's primary group is stored in /etc/passwd (the 4th field)

Excerpt from /etc/passwd

```
simmsben:x:1200:90:Benji Simms:/home/cis90/simmsben:/bin/bash
roddyduk:x:1201:90:Duke Roddy:/home/cis90/roddyduk:/bin/bash
clastmax:x:1009:191:Max Clastor:/home/cis191/clastmax:/bin/bash
derriale:x:1202:90:Alex Derrick:/home/cis90/derriale:/bin/bash
garciton:x:1203:90:Tony Garcia:/home/cis90/garciton:/bin/bash
garibjam:x:1204:90:James Garibay:/home/cis90/garibjam:/bin/bash
rochajua:x:1205:90:Juan Rocha:/home/cis90/rochajua:/bin/bash
delfimik:x:1206:90:Mike Delfin:/home/cis90/delfimik:/bin/bash
dingechr:x:1207:90:Christine Dinges:/home/cis90/dingechr:/bin/bash
blacksea:x:1208:90:Sean Black:/home/cis90/blacksea:/bin/bash
antiden:x:1209:90:Dennis Anti:/home/cis90/antiden:/bin/bash
```

Secondary groups are recorded in /etc/group

Excerpts from /etc/group

users:x:100:guest,guest90,jimg,abbenste,arltjef,bolasale,bowerjak,dycktim,farreeli,ga virxim,gilart,gonzaian,goodmthe,hammoste,kotilnat,lenzpat,maganfra,mattimar,mccarmic, mchalgeo,mezalui,ortegcar,rochaleo,spadymat,starkmic,vasqucar,vistigab,wallgle,watsoh ar,quintjos,swansgre,archiand,moonecar,orourpat,pantogab,velasoli,simmsben,roddyduk,c lastmax,derriale,garciton,garibjam,rochajua,delfimik,dingechr,blacksea,antiden,pirkll au,birmijam,messison,zilissau,plastadr,brownliz,husemat,botoschr,perezrud,palmilar,sa linjac,hamiljas,pennitan,valadand,woodjan,henrydal,galbrnat,dakkaabd,cardefra,daviesa r,hrdinste,redmanic,enriqste,dawadast,menafer,orozcmig,srecklau,mottste,fouric,wattsl uk,dahlicas,velasliv,pitzemik,komicser,parrijen,beltredt,hernaaar,brownbri,castrsal,martiant,joossam,ojedavic,millehom,alvesdes,bejarjoh,bergejoh,breitrob,clarkgal,desotm at,gardnnic,huangyan,leetheri,lewisgre,studetes,lighttho,lindadav,madrista,normasea,poncimar,rochever,schreche,schwajoe,tatlojas,velasjos,lukewat,mikedel,seanbla,veracroc,simmsmar

```

staff:x:503:jimg,rsimms,gerlinde
cis90:x:90:jimg,guest,rsimms
cis130:x:130:jimg,rsimms
```

Every user is a member of a **primary group** (shown in /etc/passwd) and multiple **secondary groups** (shown in /etc/group)

```
/home/cis90/roddyduk $ groups roddyduk
roddyduk : cis90 users

[roddyduk@opus ~]$ id
uid=1201(roddyduk) gid=90(cis90) groups=90(cis90),100(users)
context=user_u:system_r:unconfined_t

/home/cis90/roddyduk $ touch mydogs
/home/cis90/roddyduk $ ls -1 mydogs
-rw-rw-r-- 1 roddyduk cis90 0 Oct 19 13:16 mydogs

Note, new files are created using the primary group
```

Permissions Review

Permissions - Review

read write execute

read W X
read write execute

read W X
read write execute

user

group

others

```
[rsimms@opus cis90]$ ls -l examples/
total 40
```

```
-rw-r--r-- 1 rsimms users 237 Oct 20 07:15 ant drwxr-xr-x 2 rsimms users 4096 Oct 20 07:16 birds drwxr-xr-x 2 rsimms users 4096 Oct 20 07:34 dogs -rw-r--r-- 1 rsimms users 779 Oct 20 07:15 nursery -rw-r--r-- 1 rsimms users 151 Oct 20 07:16 twister
```

You should now be able to interpret the permissions, user and groups you see on long listings

Permissions - Review

Task: Modify the permissions of the terminal device you are logged in on so the guest90 account has write permission.

Hint: What command shows you the terminal device you are using? Hint: How do you do a long listing of all terminal devices?

In another Putty session, login as guest90 and write a message to your first session using this command:

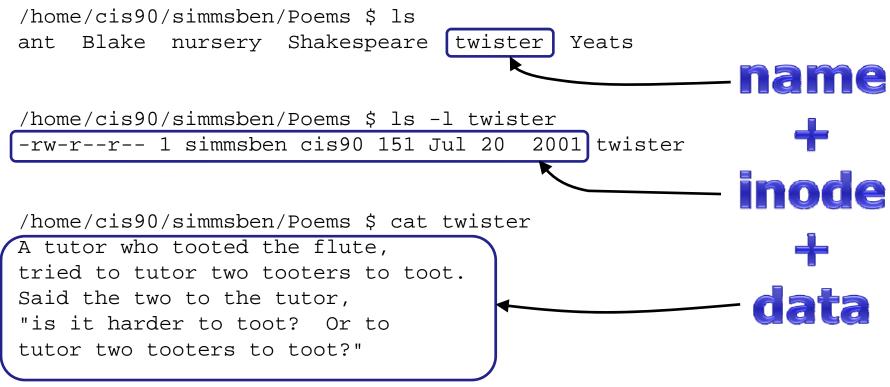

banner I did it! > /dev/pts/xx
(where xx is your terminal device)

Directory permissions

UNIX Files The three elements of a file

Permissions, owner and group are kept in the inode of a file

bigfile 102574 bin 102575 letter 102609 •-

Hello Mother! Hello Father!

Here I am at Camp Granada. Things are very entertaining,

and they say we'll have some fun when it stops raining.

All the counselors hate the waiters, and the lake has alligators. You remember Leonard Skinner? He got ptomaine poisoning last night after dinner.

Now I don't want this to scare you, but my bunk mate has

malaria. You remember Jeffrey Hardy? Their about to organize a searching party.

Take me home, oh Mother, Father, take me home! I hate Granada.

Don't leave me out in the forest where I might get eaten

by a bear! Take me home, I promise that I won't make noise.

or mess the house with other boys, oh please don't make me

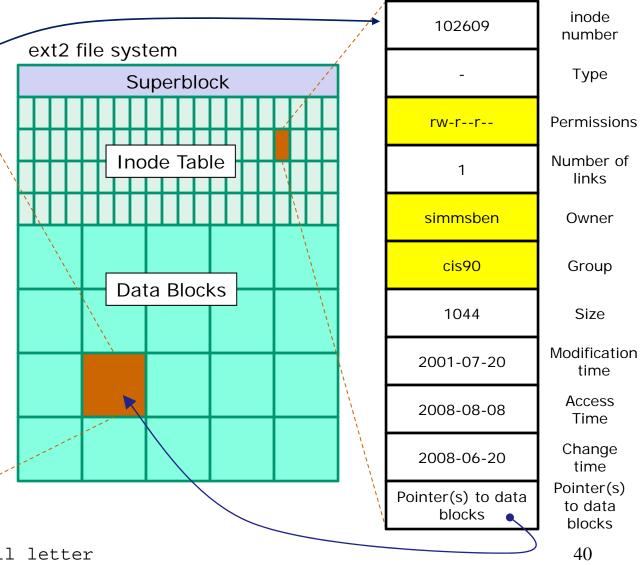

stay -- I've been here one whole day.

Dearest Father, darling Mother, how's my precious little brother? I will come home if you miss me. I will even let Aunt Bertha hug and kiss me!

Wait a minute! It's stopped hailing! Guys are swimming!

Guys are sailing! Playing baseball, gee that's better! Mother, Father, kindly disregard this letter.

Alan Sherman

Use the -R option to recursively show contents of all subdirectories

Directory permissions READ

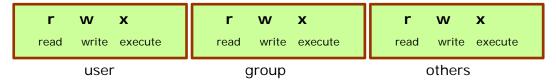

Permission	File	Directory
Read (4)	cat, more, file, head, tail, cp	Is
Write (2)	vi, saving mail	cp (into), mv, rm, In
Execute (1)	\$ command	cd, Is -I, find

Use the **Is** command to read the contents of a directory. Note, having read permission is required!

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

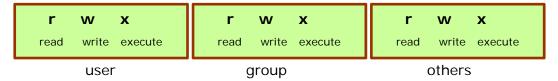

examples

If read permission is removed from the directory ...

Can we still list the directory contents?

Directory Read Permission

Remove read permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-r examples /home/cis90/roddyduk \$ ls -ld examples d-wxrwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples 2525532 birds 2525533 dogs

examples

Can we still list the directory contents?

/home/cis90/roddyduk \$ Is -I examples/
ls: examples/: Permission denied
/home/cis90/roddyduk \$

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

examples

If read permission is removed from the directory ...

Can we still cd into the directory?

Directory Read Permission

Remove read permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-r examples /home/cis90/roddyduk \$ Is -Id examples d-wxrwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples 2525532 birds 2525533 dogs

examples

Can we still **cd** into the directory?

/home/cis90/roddyduk \$ cd examples/
/home/cis90/roddyduk/examples \$ Is
ls: .: Permission denied
/home/cis90/roddyduk/examples \$ Is birds
abby nibbie

Yes, but ...

- we still can't list the contents,
- yet we can still access anything in the directory!

It's like walking into a pitch black room. You can't see anything, but if you know where things are you can still use them.

Directory permissions WRITE

Directory Write Permission

inodeNum1 fileName1 inodeNum2 fileName2

rwx

rwx

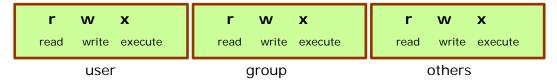

Permission	File	Directory
Read (4)	cat, more, file, head, tail, cp	ls
Write (2)	vi, saving mail	cp, mv, rm, ln
Execute (1)	\$ command	cd, ls -I, find

Removing directory w permission

- can't cp files to it,
- can't remove files,
- can't move files out,
- can't add links

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

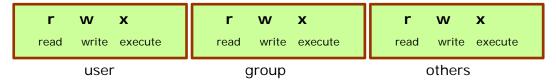

examples

If write permission is removed from the directory ...

Can we remove files from the directory?

Remove write permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-w examples
/home/cis90/roddyduk \$ ls -ld examples
dr-xrwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/

2525532 birds 2525533 dogs

examples

Can we remove files form the directory?

/home/cis90/roddyduk/examples \$ rmdir dogs rmdir: dogs: Permission denied

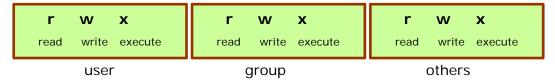

Yet we can cd into and list directory contents

/home/cis90/roddyduk \$ cd examples/
/home/cis90/roddyduk/examples \$ is
birds dogs

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

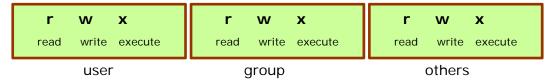

examples

If write permission is removed from the directory ...

Can we create new files or copy/move files into the directory?

Directory Read Permission

Remove write permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-w examples
/home/cis90/roddyduk \$ ls -ld examples
dr_xrwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/

2525532 birds 2525533 dogs

examples

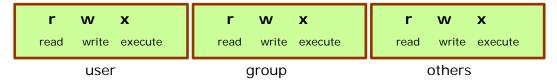

Can we create new files or copy/move files into the directory?

```
/home/cis90/roddyduk $ cp letter examples/
cp: cannot create regular file `examples/letter': Permission denied
/home/cis90/roddyduk $ mv letter examples/
mv: cannot move `letter' to `examples/letter': Permission denied
/home/cis90/roddyduk $ touch examples/newfile
touch: cannot touch `examples/newfile': Permission denied
/home/cis90/roddyduk $
```

To change the contents of a directory (either add or remove files) requires write permission

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

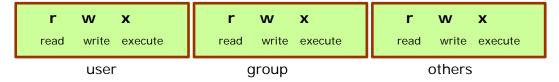

examples

If write permission is removed from the directory ...

Can we move files out of the directory?

Directory Read Permission

Remove write permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-w examples /home/cis90/roddyduk \$ ls -ld examples dr-xrwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/ 2525532 birds 2525533 dogs

examples

Can we move files out of the directory?

/home/cis90/roddyduk \$ mv examples/birds.
mv: cannot move `examples/birds' to `./birds': Permission denied

Directory permissions EXECUTE

Directory Execute Permission

inodeNum1 fileName1 inodeNum2 fileName2

rwx

rwx

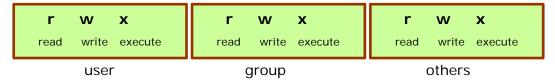

Permission	File	Directory
Read (4)	cat, more, file, head, tail, cp	ls
Write (2)	vi, saving mail	cp, mv, rm, In
Execute (1)	\$ command	cd, ls -l, find

Removing directory x permission

- cannot retrieve inode information (Is –I) (which means no file data either)
- cannot cd into directory

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

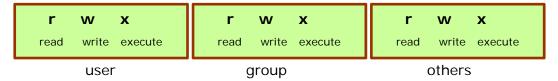

examples

If execute permission is removed from the directory ...

Can we change into (cd) the directory?

Directory Read Permission

Remove execute permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-x examples /home/cis90/roddyduk \$ ls -ld examples drw-rwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/ 2525532 birds 2525533 dogs

examples

Can we change into (cd) the directory?

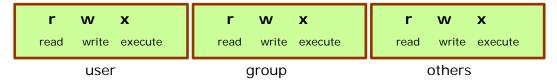

/home/cis90/roddyduk \$ cd examples/
-bash: cd: examples/: Permission denied
/home/cis90/roddyduk \$

Execute permission is required to change into a directory or to get inode based information for any of the files in the directory. Note, without inode information you can't get to a file's data.

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

2525532 birds 2525533 dogs

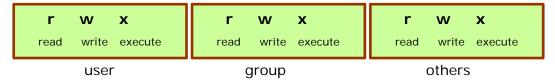

examples

If execute permission is removed from the directory ...

Can we list directory contents?

Directory Read Permission

Remove execute permission and confirm it's gone

/home/cis90/roddyduk \$ chmod u-x examples /home/cis90/roddyduk \$ ls -ld examples drw-rwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/ 2525532 birds 2525533 dogs

examples

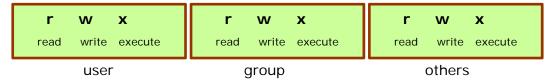

Can list directory contents?

/home/cis90/roddyduk \$ is examples/birds dogs

Start with normal directory permissions:

/home/cis90/roddyduk \$ Is -Id examples/
drwxrwxr-x 5 roddyduk cis90 4096 Oct 19 13:49 examples/
/home/cis90/roddyduk \$ Is -i examples/
2525532 birds 2525533 dogs

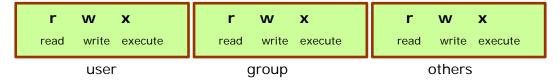

2525532 birds 2525533 dogs

examples

If execute permission is removed from the directory ...

Can we do a long listing of the directory?

Remove execute permission and confirm it's gone

```
/home/cis90/roddyduk $ chmod u-x examples
/home/cis90/roddyduk $ ls -ld examples
drw-rwxr-x 4 roddyduk cis90 4096 Oct 19 13:59 examples/
```

2525532 birds 2525533 dogs

examples

Can we do a long listing (show inode information) of the directory?

Incomplete! Only file names. No information kept in the file's inode is shown!

We can read the filenames, but without execute permission we can't retrieve information from the inode

permissions fun

Go slowly and follow all directions

- Find the buried treasure in your Hidden folder.
- Beware! once you find it, make sure you set permissions to protect your treasure from everyone!

File Descriptors

Input and Output

File Descriptors

Every process is given three open files upon its execution. These open files are inherited from the shell

stdin

Standard Input (0) defaults to the user's terminal keyboard

stdout

Standard Output (1)

defaults to the user's terminal screen

stderr

Standard Error (2)

defaults to the user's terminal screen

File Descriptors

Example program: sort command

```
/home/cis90/roddyduk $ cat names
duke
benji
homer
lucy
scout
chip
/home/cis90/roddyduk $ sort names
benji
chip
duke
                            The sort command will sort
homer
                            the lines in a file and send
lucy
                            the sorted lines to stdout
scout
                            (defaults to the terminal)
```

File Descriptors

Example program: sort command

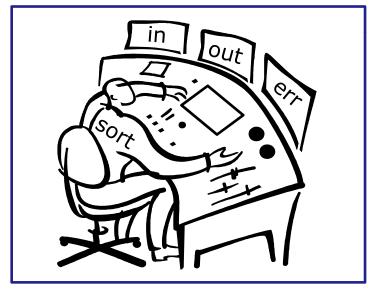

If a file name is not specified as an argument on the command line, then the **sort** command will start reading from **stdin** (defaults to the keyboard) until it gets an EOF (End of File).

After getting the EOF, the lines are sorted and sent to **stdout** (defaults to the terminal)

Lets visualize the sort program being loaded into memory and running as a process by the kernel

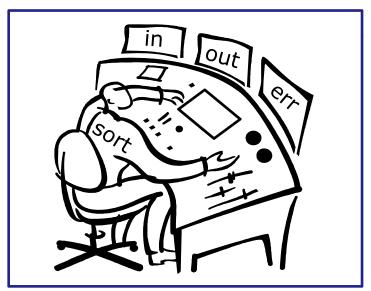

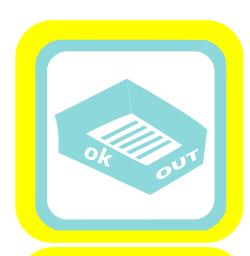

A day in the life of a process

There is one in tray and two out trays

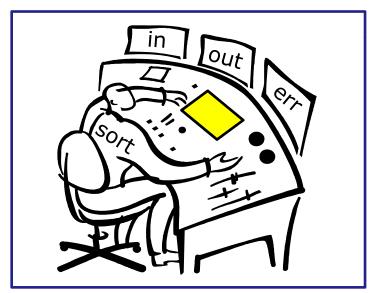

A day in the life of a process

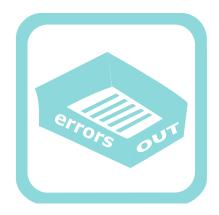

There is also a place where the process can check to see if there were any options or arguments specified on the command line

A day in the life of a process

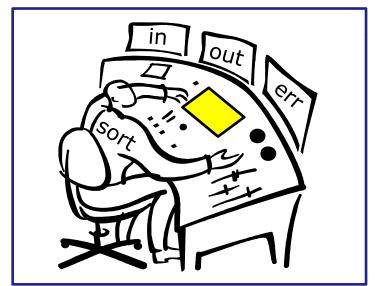

sort process example no args

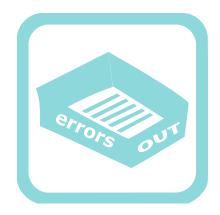

/home/cis90/roddyduk \$ sort

The sort process begins by checking to see if there are any options or arguments collected (and expanded) by the shell. In this case there are no options and no arguments.

You check your little instruction window and see no options or arguments to handle. Given that you reach into your in tray to grab the first line to sort.

/home/cis90/roddyduk \$ sort kayla sky bella benji penji bella sky tayla charlie

Note: You work so hard and fast. Every time your reach into the in tray there is another line for you. They just magically keep appearing from somewhere into your in tray. You have no idea where they are coming from.

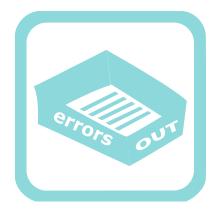

/home/cis90/roddyduk \$ sort kayla sky bella benji **EOF** charlie ctrl

Then suddenly, when you reach into the in tray and instead of another line you find an EOF. You know (your internal DNA code) that this EOF means there are no more lines coming. You must sort what you have collected so far and place them, in order, into your out tray.

bella

benji

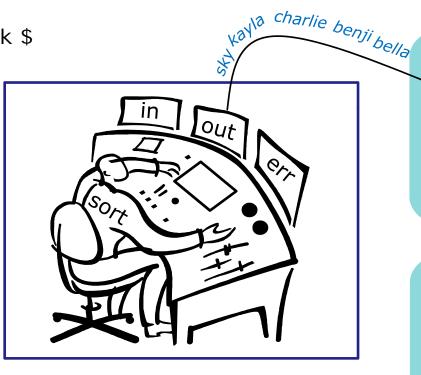

charlie

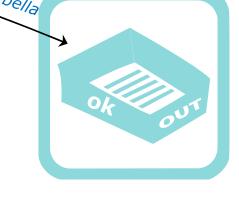

kayla

sky

/home/cis90/roddyduk \$

As fast as you can, you sort them, and place then in order in your out tray. They keep getting removed magically from the out tray. You have no idea where they go.

sort process example bad arg

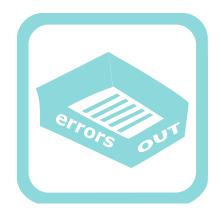

/home/cis90/roddyduk \$ sort bogus

The sort process begins by checking to see if there are any options or arguments collected (and expanded) by the shell. In this case there is one argument: bogus

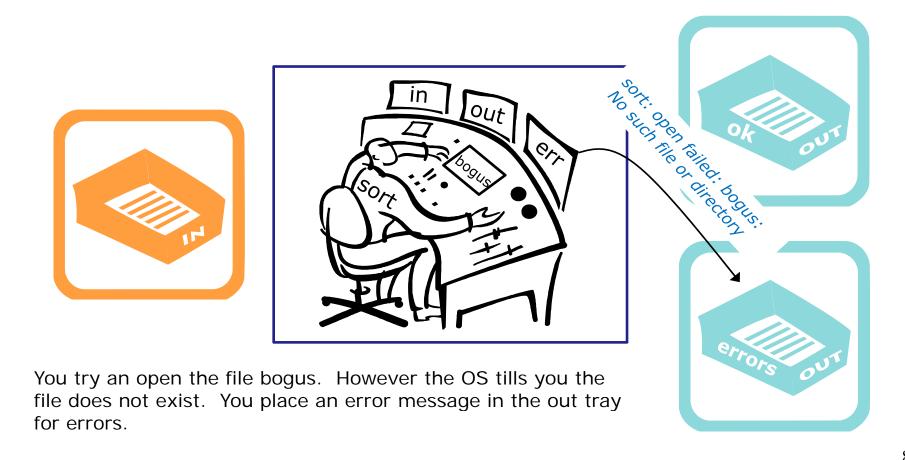

You check your little instruction window and see an argument (bogus). You know (your internal DNA) tells you this must be a file name containing lines to sort

/home/cis90/roddyduk \$ sort bogus

sort: open failed: bogus: No such file or directory

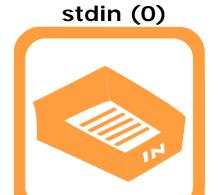

bringing it home

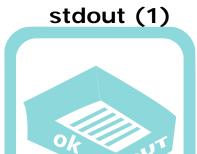

Ok, lets make the visualization a little more realistic

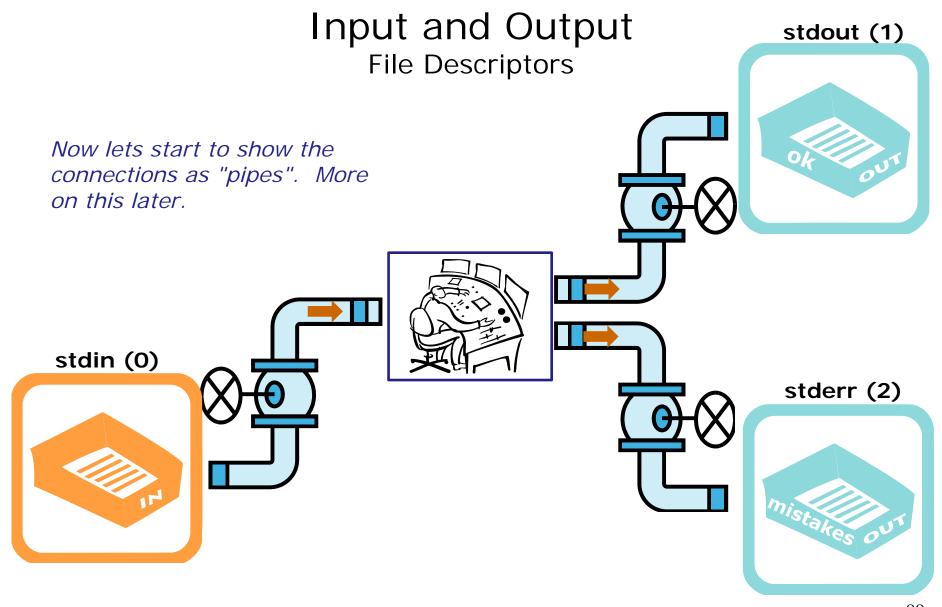

The actual in and out trays have names as well as numbers ... stdin (0) stdout (1) and stderr (2).

File Descriptors

Lets replace the little worker with a box where we can load **programs** into to run as a **process**

normal output is written to stdout

errors are

written to

stderr

stdout

input (if necessary) is read from stdin

89

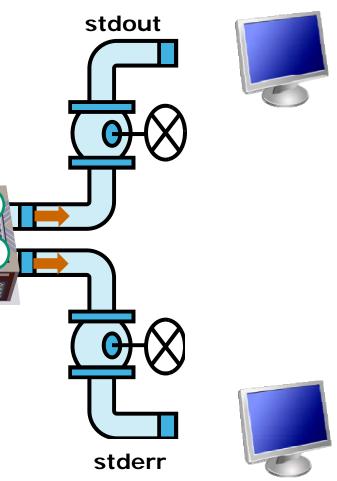

Input and Output File Descriptors

Finally, lets show the default devices the pipes are attached to.

Stdin

Standard Input (0) defaults to the user's keyboard

Standard Output (1) defaults to the user's terminal

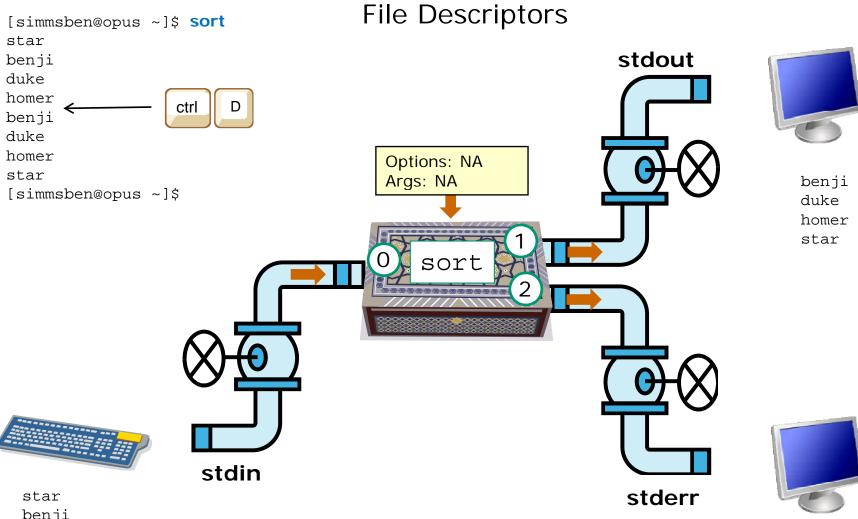

Standard Error (2) 90 defaults to the user's terminal

Input and Output File Descriptors

benji duke homer

Note, the sort program in this example gets its input from the keyboard via **stdin**

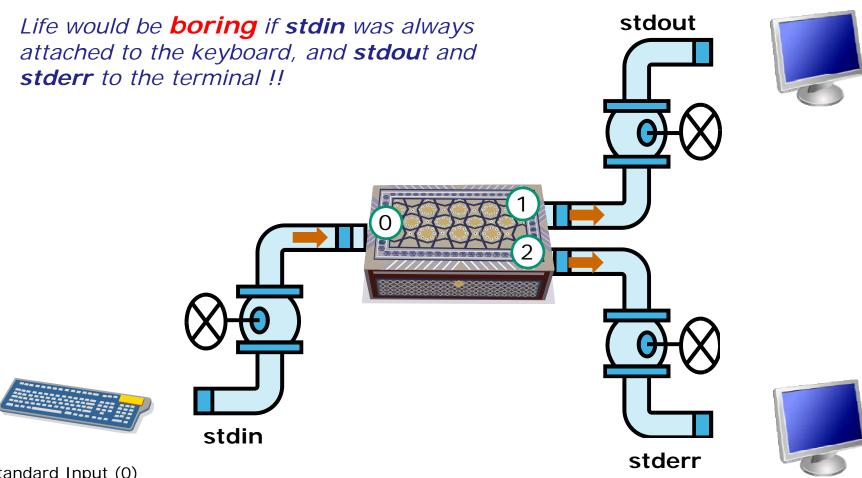

File Redirection

Standard Output (1)

defaults to the user's terminal

Standard Input (0) defaults to the user's keyboard

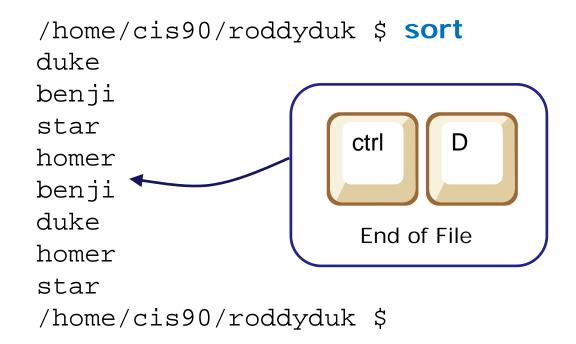

Standard Error (2)

defaults to the user's terminal

File Redirection

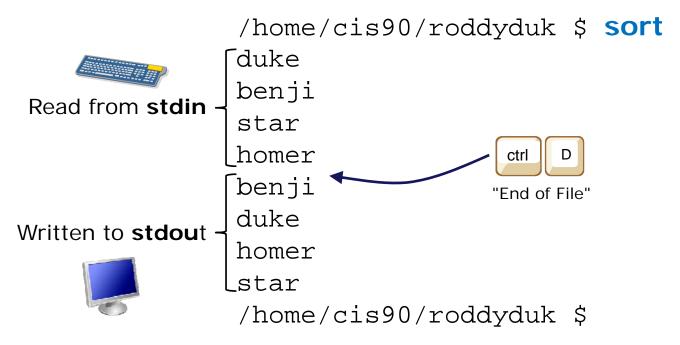

Let's look at the sort example again

Lines are read from stdin (attached to keyboard), sorted, then written to stdout (attached to terminal)

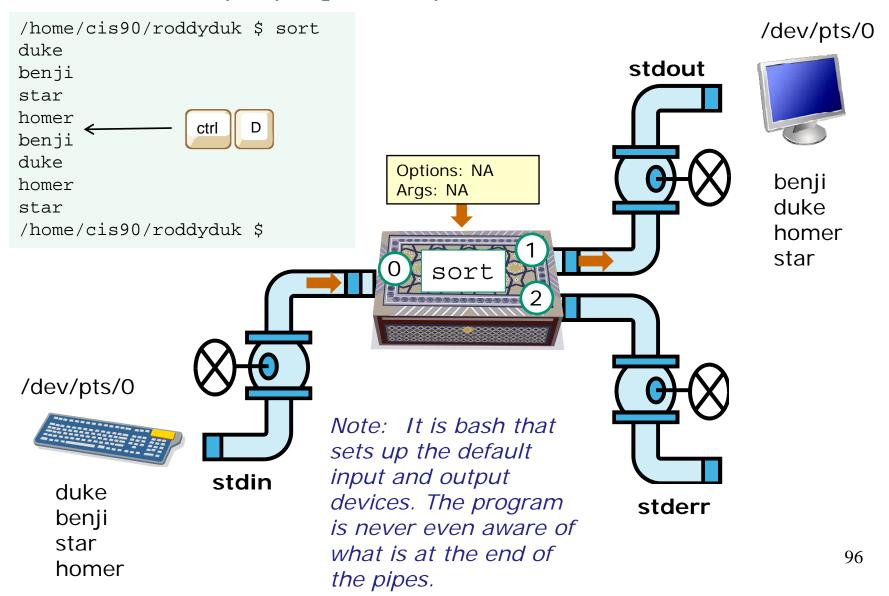

Input and Output File Redirection

The sort program is loaded. **bash** assigns **stdin** to the keyboard and **stdout** to the terminal.

Example program to process: sort command

But what if we could tell bash to change the devices at the end of the pipes? We can ...

Input and Output File Redirection

The input and output of a program can be **redirected** from and to other files:

0< filename

Input will now come from filename rather than the keyboard.

1> filename

Output will now go to filename instead of the terminal.

2> filename

Error messages will now go to filename instead of the terminal.

>> filename

Output will now be appended to filename.

The redirection is specified on the command line using the syntax specified below ...

Input and Output File Redirection

The input and output of a program can be **redirected** from and to other files:

p< filename</pre>

Input will now come from filename rather than the keyboard.

filename

Output will now go to filename instead of the terminal.

2> filename

Error messages will now go to filename instead of the terminal.

>> filename

Output will now be appended to filename.

The 0 in 0< is not necessary, just use < to redirect stdin

The 1 in 1> is not necessary, just use > to redirect stdout

The 2 in 2> is necessary, always use 2> to redirect stderr

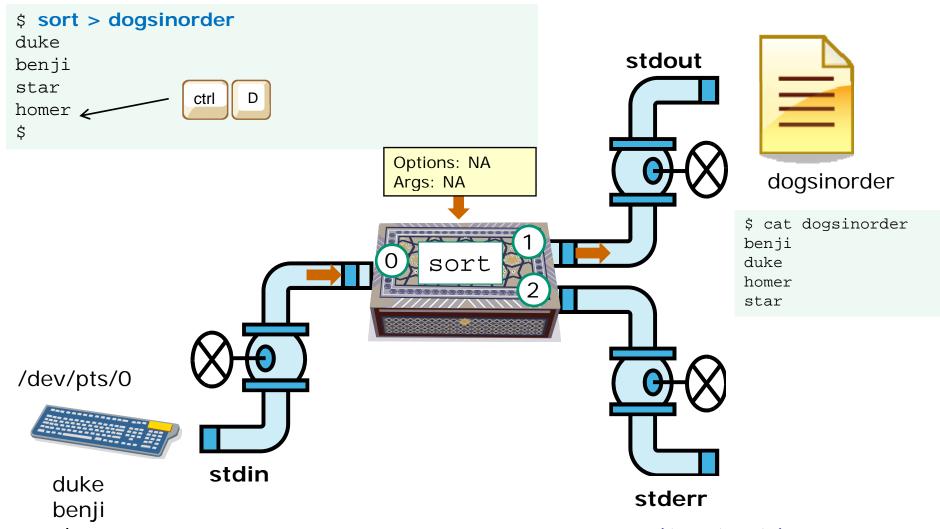

Lets try redirecting stdout ...

File Redirection

Normal output (stdout) is redirected to the file dogsinorder [simmsben@opus ~]\$ sort > dogsinorder If the file doginorder does duke not exist, it is benji created. If it star does exist it is ctrl homer _ emptied! [simmsben@opus ~]\$ cat dogsinorder benji duke homer star [simmsben@opus ~]\$

Example program to process: sort command

star homer

Note: sort doesn't know about the keyboard (/dev/pts/0) or dogsinorder file. It just reads from **stdin** and writes to **stdout**.

File Redirection

Create a file named names and fill it with your favorite dog names to use in the next example

```
/home/cis90/roddyduk $ echo duke > names
/home/cis90/roddyduk $ echo benji >> names
/home/cis90/roddyduk $ echo star >> names
/home/cis90/roddyduk $ echo homer >> names
```

/home/cis90/roddyduk \$ cat names duke

benji

star

homer

Note, the use of >> to append the output of the echo command to the end of the names file

Let's try redirecting stdin and stdout ...

File Redirection

[roddyduk@opus ~]\$ cat names
duke
benji input is redirected
star from the file names
homer
[roddyduk@opus ~]\$ sort < names > dogsinorder
> dogsinorder

[roddyduk@opus ~]\$ cat dogsinorder

benji

duke

homer

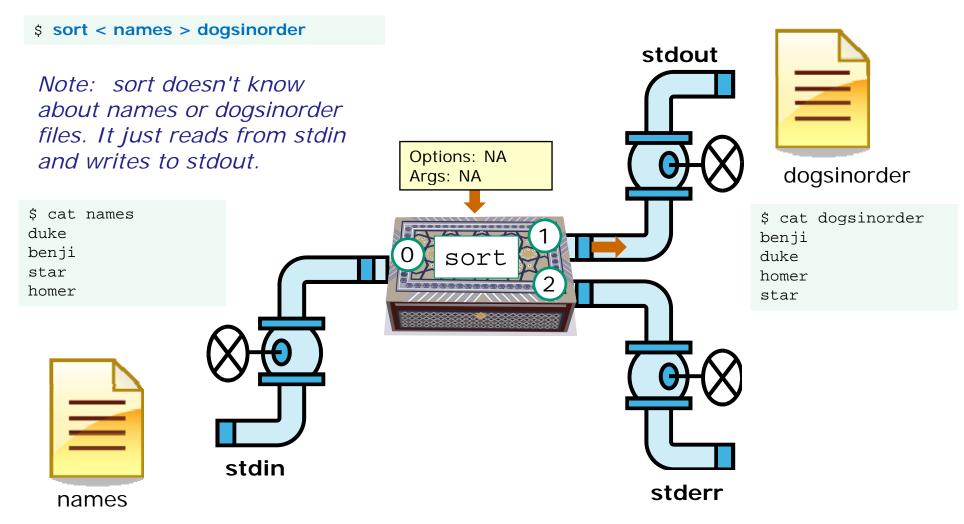

star

[roddyduk@opus ~]\$

Note: The bash shell handles the command line parsing and redirection. The sort command has no idea what stdin or stdout are even connected to.

Example program to process: sort command

In this example, sort is getting it's input from stdin, which has been connected to the names file

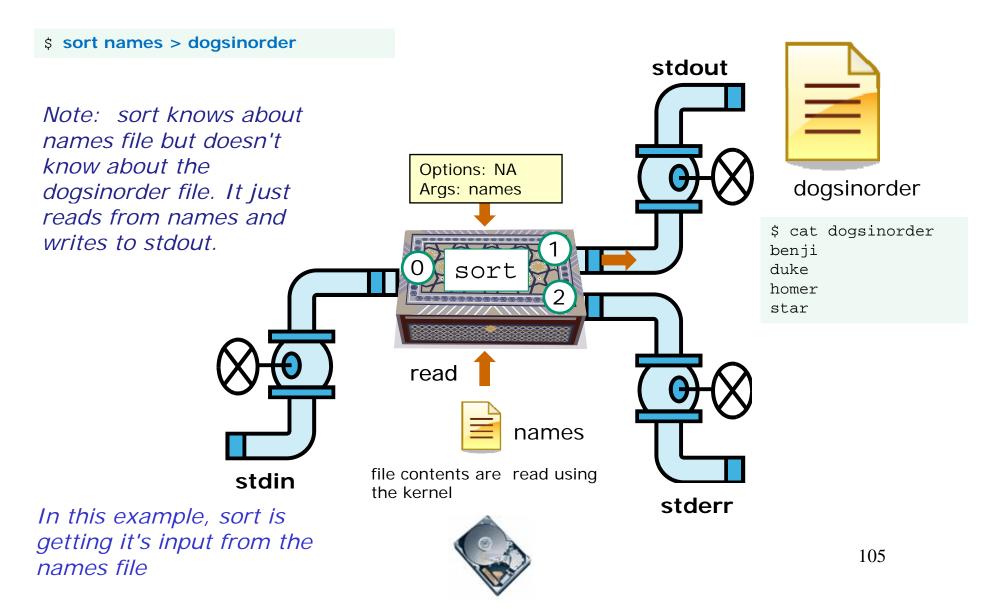

File Redirection

Now let's try something different. The difference on the command line is very subtle. The names file is now an **argument** passed to sort from the command line. Output is redirected to the file dogsinorder. The sort program writes to **stdout** and has no idea **stdout** is really connected to the file dogsinorder. It is the shell that opens the file dogsinorder.

The sort program is fully aware of the names file. It is the sort program's responsibility to directly open this file and read it. This is done by the sort code making requests to the kernel to read data from the file on the hard drive.

Example program to process: sort command

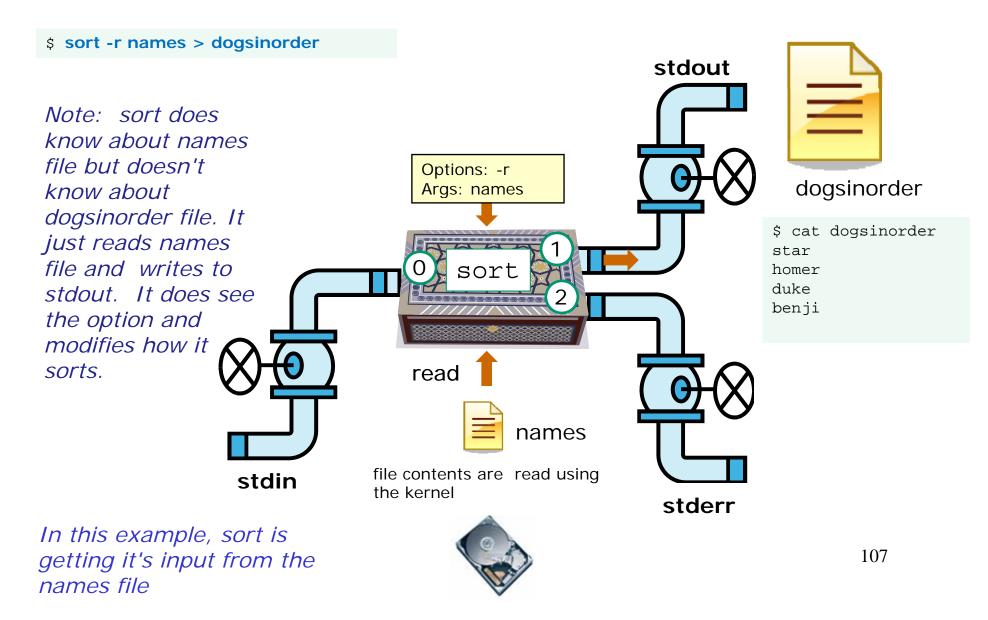

File Redirection

OK, another little twist, lets pass in an option as well this time

Example program to process: sort command

File Redirection

/dev/pts/0

```
[roddyduk@opus ~]$ cat names
duke
benji
star
homer
[roddyduk@opus ~]$
[roddyduk@opus ~]$ tty
/dev/pts/0
[roddyduk@opus ~]$ sort names > /dev/pts/1
[roddyduk@opus ~]$
```

Note, everything in UNIX is a file so we can even redirect to another terminal

/dev/pts/1

```
[roddyduk@opus ~]$ tty
/dev/pts/1
[roddyduk@opus ~]$ benji
duke
homer
star
```

File Redirection

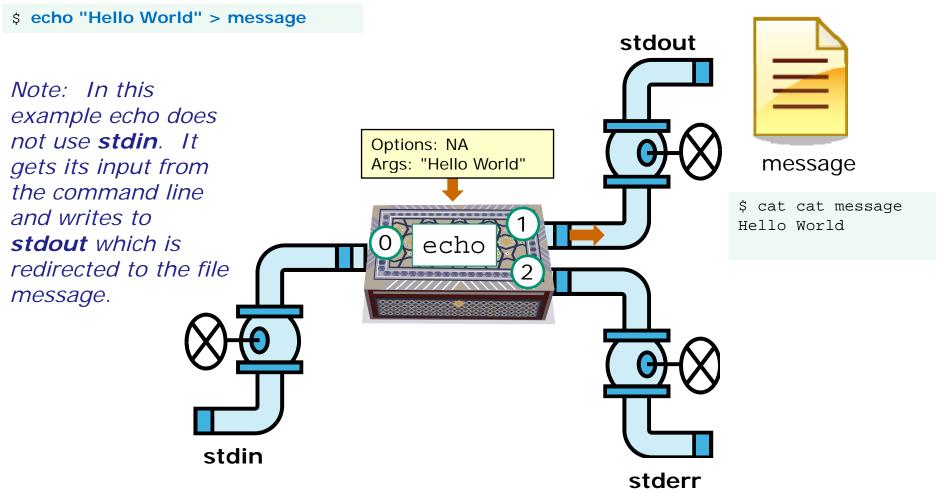

Another example ...

```
[roddyduk@opus ~]$ echo "Hello World" > message
[roddyduk@opus ~]$ cat message
                                                              >> appends
Hello World
[roddyduk@opus ~]$ echo "Hello Universe" >> message <
                                                              to the end of
[roddyduk@opus ~]$ cat message
                                                              the file
Hello World
Hello Universe
[roddyduk@opus ~]$ echo "Oops" > message
[roddyduk@opus ~]$ cat message
                                                    > overwrites
0ops
                                                    anything already
[roddyduk@opus ~]$ > message ←
                                                    in the file!
[roddyduk@opus ~]$ cat message
[roddyduk@opus ~]$
```

CIS 90 - Lesson 8

Example program to process: echo command

In this example, echo is getting it's input from the command line

File Redirection

Another example ...

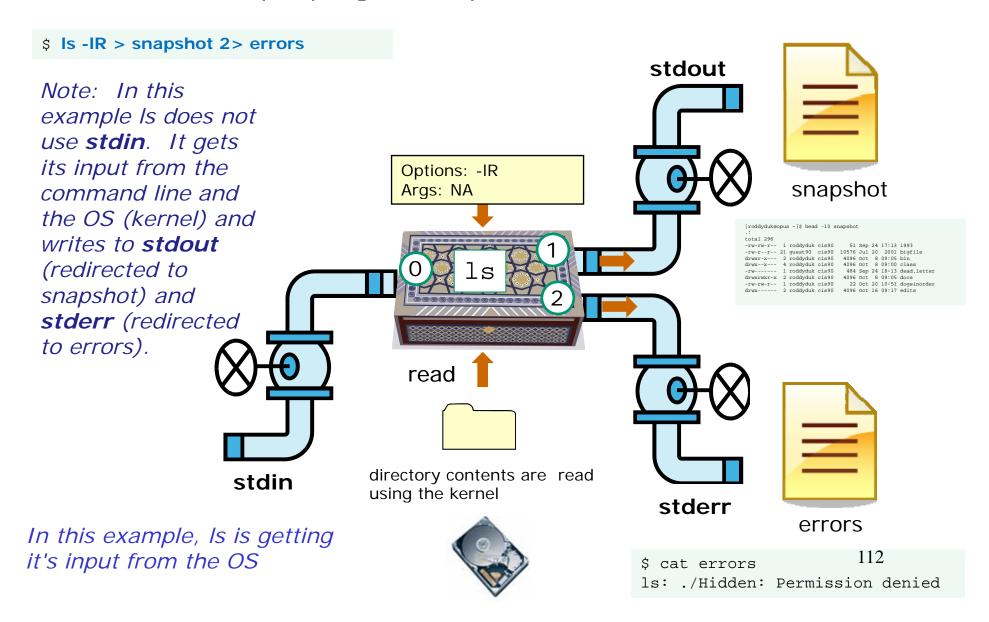

```
[roddyduk@opus ~]$ Is -IR > snapshot

Much better!

All error messages are redirected to the bit bucket

bit bucket

Pipelines

Pipelines

Commands may be chained together in such a way that the **stdout** of one command is "piped" into the **stdin** of a second process.

Filters

A program that both reads from **stdin** and writes to **stdout**.

Tees

A filter program that reads **stdin** and writes it to **stdout** and the file specified as the argument.

For example, the following command sends a sorted list of the current users logged on to the system to the screen, and saves an unsorted list to the file users.

who | tee users | sort

Important! Redirection sends output to another file. Pipes send output to another process.

Input and Output Pipelines

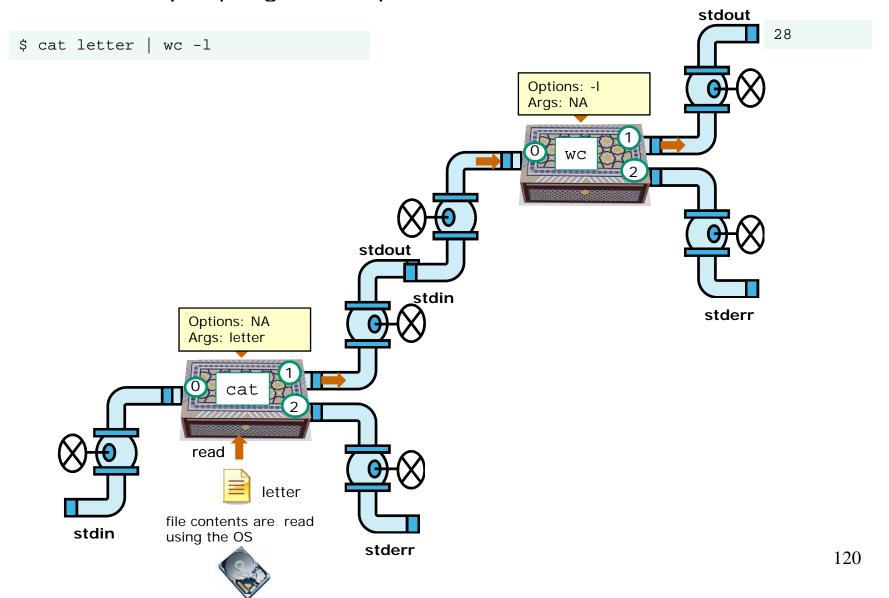

Let's count the lines in letter

```
[roddyduk@opus ~]$ cat letter | wc -l
28
[roddyduk@opus ~]$
```

CIS 90 - Lesson 8

Example program to process: cat and wc commands

Pipelines

Task: I would like to save a sorted list of users and a count of how many users are logged on

```

find command issued in the poems directory

note: reduced font size so it will fit on this slide

[roddyduk@opus poems]\$

How many files (approximately) are on Opus?

Find files whose names start with sonnet in current home directory

```
[roddyduk@opus ~]$ find -name "sonnet*"
find: ./Hidden: Permission denied
./poems/Shakespeare/sonnet1
./poems/Shakespeare/sonnet2
./poems/Shakespeare/sonnet3
./poems/Shakespeare/sonnet4
./poems/Shakespeare/sonnet5
./poems/Shakespeare/sonnet7
./poems/Shakespeare/sonnet9
./poems/Shakespeare/sonnet10
./poems/Shakespeare/sonnet15
./poems/Shakespeare/sonnet17
./poems/Shakespeare/sonnet26
./poems/Shakespeare/sonnet35
./poems/Shakespeare/sonnet11
./poems/Shakespeare/sonnet6
[roddyduk@opus ~]$
```

Find sonnet6 files starting in parent directory (/home/cis90)

[roddyduk@opus ~]\$ find .. -name "sonnet6" 2> /dev/null

- ../guest/Poems/Shakespeare/sonnet6
- ../roddyduk/poems/Shakespeare/sonnet6
- ../stanlcha/poems/Shakespeare/sonnet6
- ../seatocol/poems/Shakespeare/sonnet6
- ../wrigholi/poems/Shakespeare/sonnet6
- ../dymesdia/poems/Shakespeare/sonnet6
- ../lyonsrob/poems/Shakespeare/sonnet6
- ../ybarrser/poems/Shakespeare/sonnet6
- ../ybarrser/poems/Sonnets/sonnet6
- ../valdemar/poems/Shakespeare/sonnet6
- ../elliokat/poems/Shakespeare/sonnet6
- ../jessuwes/poems/Shakespeare/sonnet6
- ../luisjus/poems/Shakespeare/sonnet6
- ../meyerjas/poems/Shakespeare/sonnet6
- ../bergelyl/sonnet6
- ../bergelyl/poems/Shakespeare/sonnet6
- ../gardnnic/poems/Shakespeare/sonnet6
- ../mohanchi/poems/Shakespeare/sonnet6
- ../whitfbob/poems/Shakespeare/sonnet6
- ../crivejoh/poems/Shakespeare/sonnet6

[roddyduk@opus ~]\$

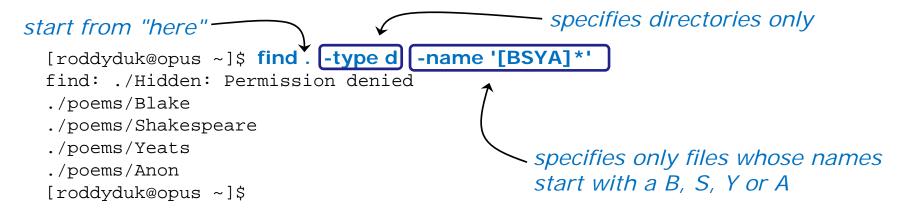

Find all directories here in my home directory and down

```
[roddyduk@opus ~]$ find . -type d
./.mozilla
./.mozilla/extensions
./.mozilla/plugins
./bin
./Hidden
find: ./Hidden: Permission denied
./poems
./poems/Blake
./poems/Shakespeare
./poems/Yeats
./poems/Anon
./olddir
./newdir
./edits
./docs
./etc
./class
./class/labs
./class/exams
./misc
[roddyduk@opus ~]$
```

Find all directories, starting here in my home directory, that start with a capital B, S, Y or A.

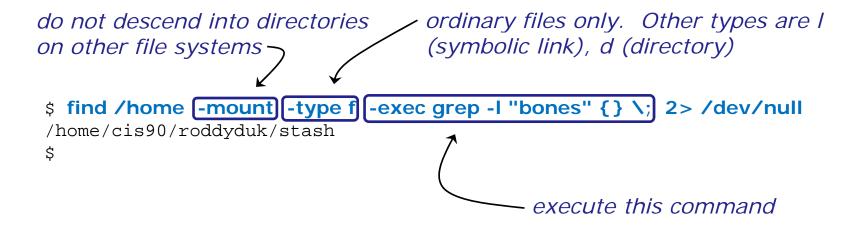

Find all files starting here in my home directory that contain town

```
[roddyduk@opus ~]$ find . -name '*town*'
find: ./Hidden: Permission denied
   ./edits/small_town
   ./edits/better_town
[roddyduk@opus ~]$
```

Find all ordinary files, starting in the /home directory, containing the word bones.

grep command

Find the word love in Shakespeare's sonnets

```
[roddyduk@opus poems]$ grep love Shakespeare/son*
Shakespeare/sonnet10:For shame deny that thou bear'st love to any,
Shakespeare/sonnet10: Shall hate be fairer lodg'd then gentle love?
Shakespeare/sonnet10: Make thee another self for love of me,
Shakespeare/sonnet15: And all in war with Time for love of you,
Shakespeare/sonnet26:Lord of my love, to whom in vassalage
Shakespeare/sonnet26: Then may I dare to boast how I do love thee,
Shakespeare/sonnet3:Of his self-love, to stop posterity?
Shakespeare/sonnet3:Calls back the lovely April of her prime,
Shakespeare/sonnet4:Unthrifty loveliness, why dost thou spend
Shakespeare/sonnet5:The lovely gaze where every eye doth dwell
Shakespeare/sonnet9: No love toward others in that bosom sits
[roddyduk@opus poems]$
```

Looking for love in all the wrong places?

find lines with love and hate

[roddyduk@opus poems]\$ grep love Shakespeare/son* | grep hate
Shakespeare/sonnet10:Shall hate be fairer lodg'd then gentle love?
[roddyduk@opus poems]\$

grep command

Find simmsben in /etc/passwd

```
[roddyduk@opus poems]$ grep simmsben /etc/passwd
simmsben:x:1160:103:Benji Simms:/home/cis90/simmsben:/bin/bash
```

Now show what line it is on

```
[roddyduk@opus poems]$ grep -n simmsben /etc/passwd
53:simmsben:x:1160:103:Benji Simms:/home/cis90/simmsben:/bin/bash
```

Background

Apache is the worlds most popular web server and it's installed on Opus. Try it, you can browse to opus.cabrillo.edu.

Every Apache configuration file must specify the location (an absolute pathname) of the documents to publish on the world wide web. This is done with the **DocumentRoot** directive. This directive is found in every Apache configuration file.

All configuration files are kept in /etc.

Tasks

- Can you use **grep** to find the Apache configuration file?

 Hint: use the -R option to recursively search all sub-directories
- What are the names of the files in Apache's document root directory on Opus?

Hint: Us the Is command on the document root directory

spell command

Run a spell check on the magna_cart file

```
/home/cis90/roddyduk $ cd docs
/home/cis90/roddyduk/docs $ Is
magna_carta MarkTwain policy
/home/cis90/roddyduk/docs $ spell magna_carta
Anjou
Arundel
Aymeric
Bergh
Daubeny
                       The spell command will
de
                      show any words not found
honour
kingdon
                      in the dictionary.
Pandulf
Poitou
Poppeley
seneschal
subdeacon
Warin
```

Count the number of misspelled words

```
/home/cis90/roddyduk/docs $ spell magna_carta | wc -l
```

Pipeline Tasks

Class Exercise

Pipeline Tasks

Background

The **last** command searches through /var/log/wtmp and prints out a list of users logged in since that file was created.

Task

Can you see the last times you were logged in on a Wednesday and then count them?

```
last | grep $LOGNAME
last | grep $LOGNAME | grep "Wed"
last | grep $LOGNAME | grep "Wed" | wc -l
```

Background

The cut command can cut a field out of a line of text where each field is deliminated by some character.

The /etc/passwd file uses the ":" as the delimiter between fields. The 5th field is a comment field for the user account.

Task

What does this command print?

cat /etc/passwd | grep \$LOGNAME | cut -f 5 -d ":"

Wrap up

CIS 90 - Lesson 8

New commands:

find find files or content grep look for text strings

sort perform sorts spell checking

tee save output to a file

wc count lines or words in a file

Next Class

Assignment: Check Calendar Page on web site to see what is due next week.

Quiz questions for next class:

- How do you redirect error messages to the bit bucket?
- What command could you use to get an approximate count of all the files on Opus and ignore the permission errors?
- For **sort dognames** > **dogsinorder** where does the sort process obtain the actual names of the dogs to sort?
 - a) stdin
 - b) the command line
 - c) directly from the file dognames

Backup

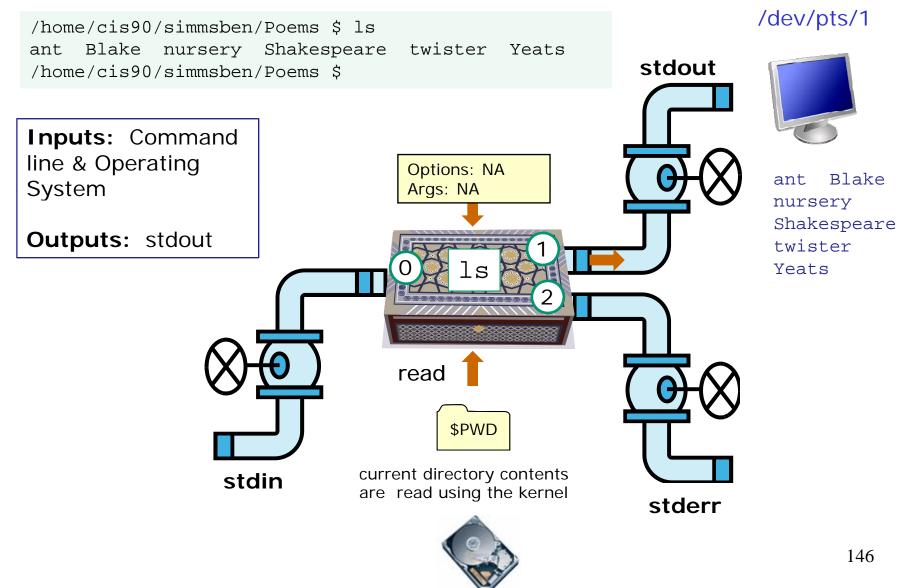

/dev/pts/1

Example program to process: bc command

/home/cis90/simmsben \$ bc bc 1.06 stdout Copyright 1991-1994, 1997, 1998, 2000 Free Software bc 1.06 Foundation, Inc. ```

Directory Write Permission

[simmsben@opus dogs]\$ ln duke.bak /tmp/mydog

[simmsben@opus dogs]\$ ln Homer herdog

All is **not well** without write permission ... why? Because filenames are stored in a directory. cp, mv, rm and In commands need to change filenames, therefore they need write access to the directory

• cannot cp files into it, can't remove files, can't move files out, can't add links

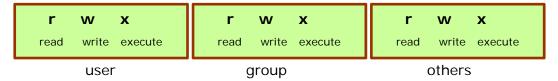

ln: creating hard link `herdog' to `Homer': Permission denied 🔀

ln: creating hard link `/tmp/mydog' to `duke.bak': Invalid cross-device link 🚫

• but you can cp files out

Directory Execute Permission

Benji removes x permission on his dogs directory

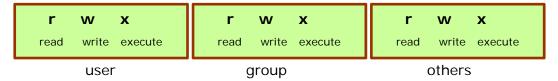

```
[simmsben@opus ~]$ chmod g-x examples/dogs/
[simmsben@opus ~]$ ls -ld examples/
