

## Lesson Module Checklist

- Slides
- WB converted
  
- Flash cards
- Page numbers
- 1st minute quiz
- Web Calendar summary
- Web book pages
- Commands
  
- LabX1 and Project posted
- Timer lock set on turnin directory
  
- Materials uploaded
- Backup slides, CCC info, handouts on flash drive
- Check that backup room headset is charged
- Spare 9v battery for mic

### **Student Learner Outcomes**

1. Navigate and manage the UNIX/Linux file system by viewing, copying, moving, renaming, creating, and removing files and directories.
2. Use the UNIX features of file redirection and pipelines to control the flow of data to and from various commands.
3. With the aid of online manual pages, execute UNIX system commands from either a keyboard or a shell script using correct command syntax.

## Introductions and Credits

Jim Griffin

- Created this Linux course
- Created Opus and the CIS VLab
- Jim's site: <http://cabrillo.edu/~jgriffin/>

Rich Simms

- HP Alumnus
- Started teaching this course in 2008 when Jim went on sabbatical
- Rich's site: <http://simms-teach.com>

And thanks to:

- John Govsky for many teaching best practices: e.g. the First Minute quizzes, the online forum, and the point grading system (<http://teacherjohn.com/>)

## **Student checklist (How to attend from home or in the classroom)**

- 1) Browse to the CIS 90 website Calendar page
  - <http://simms-teach.com>
  - Click CIS 90 link on left panel
  - Click Calendar link near top of content area
  - Locate today's lesson on the Calendar
  
- 2) Download the presentation slides for today's lesson for easier viewing
  
- 3) Click Enter virtual classroom to join CCC Confer session
  
- 4) Connect to Opus using Putty or ssh command

# Student checklist (How to layout your screen when attending class)

CCC Confer

Downloaded PDF of Lesson Slides

The screenshot displays a virtual classroom environment. On the left, a browser window shows the 'Rich's Cabrillo College CIS Classes' website with a calendar for CIS 90 (Spring). The main area is a video conference window titled 'CCC Confer - RICH SIMMS VIRTUAL CLASSROOM'. It features a video feed of Rich Simms, a 'Class Activity - Where are you now?' map, and a chat window. A 'PARTICIPANTS' list shows Rich Simms as the moderator and Benji Simms as the user. A 'CHAT' window shows a conversation about textbooks. On the right, an Adobe Acrobat Pro window displays a PDF of lesson slides titled 'The CIS 90 System Playground'. Below the slides, two terminal windows show login prompts for 'edu's password' and 'Welcome to Opus'.

CIS 90 website  
Calendar page

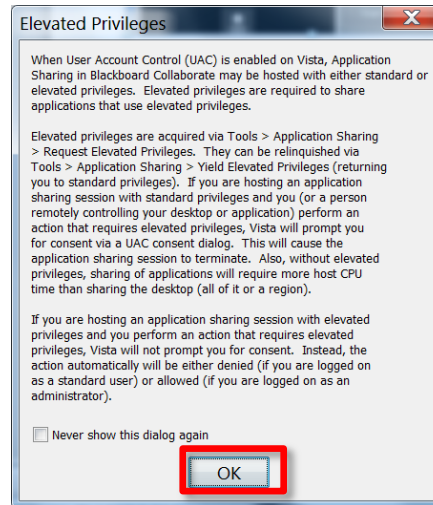

One or more login  
sessions to Opus

# Student checklist (To share your desktop with the class)

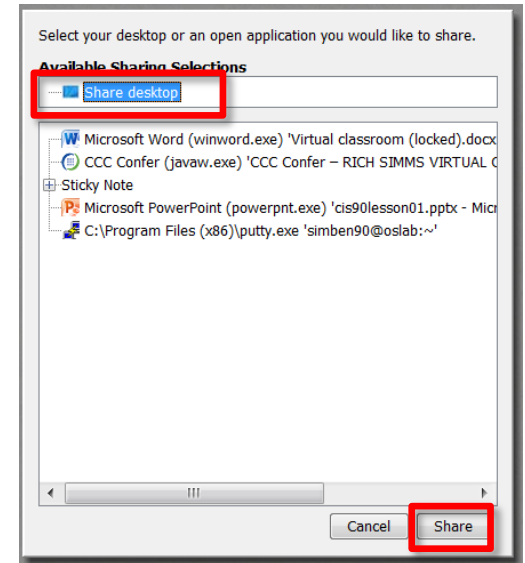

1) Instructor gives you sharing privileges

2) Click overlapping rectangles icon. If white "Start Sharing" text is present then click it as well.

3) Click OK button.

4) Select "Share desktop" and click Share button.

Instructor: **Rich Simms**

Dial-in: **888-886-3951**

Passcode: **136690**

# Rich's CCC Confer checklist - setup

[ ] Preload White Board

[ ] Connect session to Teleconference

*Session now connected to teleconference*

[ ] Is recording on?

*Red dot means recording*

[ ] Use teleconferencing, not mic

*Should be greyed out*

*Should show as this live "off hook" telephone handset icon and the Teleconferencing ... message displayed*

## Rich's CCC Confer checklist - app layout

The screenshot displays a Windows desktop with several applications open:

- CCC Confer**: A window on the left showing a video feed of Rich Simms, participant controls, and chat.
- Chrome**: A browser window displaying a quiz titled "Part 1 - Flashcards questions (1 point each)". Questions include: "[Q1] What command shows the other users logged in to the computer?" and "[Q2] What environment variable is used by the shell to determine which directories to search when locating a command?".
- Putty**: A terminal window showing a login session for user 'simben90' on host 'oslab.cabrillo.edu'. The terminal output includes: "login as: simben90", "simben90@oslab.cabrillo.edu's password:", "Access denied", "simben90@oslab.cabrillo.edu's password:", "Last login: Mon Oct 8 18:58:43 2012 from d.com", and "Welcome to Operating System Serving Cabrillo College".
- vSphere Client**: A window showing the vCenter interface for a virtual machine named "CIS 192".
- foxit for slides**: A window in the background showing a file explorer with folders like 'boot', 'bin', 'etc', and 'sbin', and files like 'mail' and 'ls'.

Red callout boxes with white text label the following elements:

- foxit for slides**: Points to the file explorer window.
- chrome**: Points to the browser window.
- vSphere Client**: Points to the vCenter window.

[ ] layout and share apps

## Rich's CCC Confer checklist - video

[ ] Video (webcam)

[ ] Make Video Follow Moderator Focus

# Rich's CCC Confer checklist - Elmo

Elmo rotated down to view side table

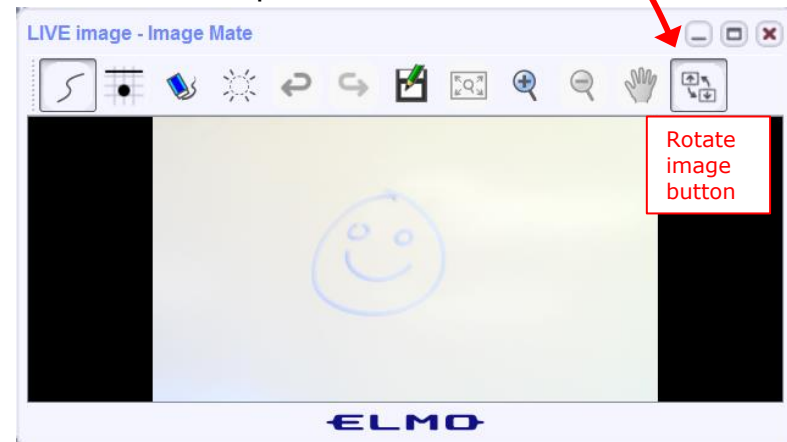

Run and share the Image Mate program just as you would any other app with CCC Confer

The "rotate image" button is necessary if you use both the side table and the white board.

Quite interesting that they consider you to be an "expert" in order to use this button!

Elmo rotated up to view white board

# Rich's CCC Confer checklist - universal fix

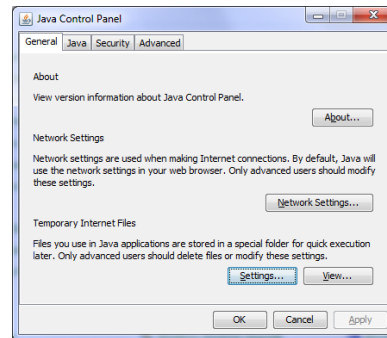

Universal Fix for CCC Confer:

- 1) Shrink (500 MB) and delete Java cache
- 2) Uninstall and reinstall latest Java runtime

Control Panel (small icons)

General Tab > Settings...

500MB cache size

Delete these

Google Java download

## Quiz

Please answer these questions **in the order** shown:

**See electronic white board**

**email answers to: [risimms@cabrillo.edu](mailto:risimms@cabrillo.edu)**

**(answers must be emailed within the first few minutes of class for credit)**

# Shell Scripting and Printing

## Objectives

- Understand how to write a script and how they run.
- Learn how to print and manage print jobs waiting to print.

## Agenda

- Quiz
- Questions
- Breaking things in Lab 10
- Extra Credit Answer
- Lesson 12 review
- Grok that?
- Housekeeping
- Shell scripting
- Final project myscript
- Final project grading rubric
- Final project permissions
- Umask again!
- Final project getting started
- Final project forum tips
- Scripting tips - echo
- Scripting tips - \$(some command)
- Scripting tips - date
- Tips on script names
- Review how scripts are run
- Printer configuration using CUPS
- Printing in Linux
- Managing print jobs
- Wrap up

# Sound Check

*Students that dial-in should mute their line using \*6 to prevent unintended noises distracting the web conference.*

*Instructor can use \*96 to mute all student lines.*

# Questions

# Questions?

Lesson material?

Labs? Tests?

How this course works?

- Graded work in home directories
- Answers in /home/cis90/answers

*Who questions much, shall learn much, and retain much.*

- Francis Bacon

*If you don't ask, you don't get.*

- Mahatma Gandhi

Chinese Proverb

他問一個問題，五分鐘是個傻子，他不問一個問題仍然是一個傻瓜永遠。

*He who asks a question is a fool for five minutes; he who does not ask a question remains a fool forever.*

# Breaking things in Lab 10

## The path (PATH) variable ... a Review

- Lab 10 often results in clobbered paths and students may think all the commands have disappeared!
- The path is a list of directories each containing commands, programs and scripts.
- The path is used by the shell to locate commands to run.
- The PATH variable defines the directories (separated by ":"s) and the search order.
- If your path gets clobbered it is possible to run commands. However to do that you must specify the full absolute pathname. For example you can always run the **ttty** command as follows:

```
/home/cis90/simben $ /usr/bin/tty  
/dev/pts/0
```

## The path (PATH) variable ... a Review

```
/home/cis90/simben $ echo $PATH
```

```
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:
```

```
/usr/sbin:/sbin:/home/cis90/simben/./bin:/home/cis90/simben/bin:.
```

1. What is the fourth directory on this path?
2. Can you name the first command, in alphabetic order, found in this directory?

*Put your answers in the chat window*

## Backup and remove your path

```
/home/cis90/simben $ oldpath=$PATH  
/home/cis90/simben $ unset PATH
```

*Backup your current path*

```
/home/cis90/simben $ tty  
-bash: tty: No such file or directory
```

*The tty command can no longer be run by typing just it's name*

```
/home/cis90/simben $ /usr/bin/tty  
/dev/pts/0
```

*Instead the full absolute pathname must be used*

```
/home/cis90/simben $ PATH=$oldpath  
/home/cis90/simben $ tty  
/dev/pts/0
```

*Restore your path to what it was*

## Class Activity

Backup and remove your path variable:

```
/home/cis90/simben $ oldpath=$PATH
```

```
/home/cis90/simben $ unset PATH
```

```
/home/cis90/simben $ echo $PATH
```

```
/home/cis90/simben $ tty
```

```
/home/cis90/simben $ /usr/bin/tty
```

*Don't restore your path yet. We will build it up one directory at a time*

## Making a path

```
/home/cis90/simben $ ls letter
```

```
-bash: ls: No such file or directory
```

```
/home/cis90/simben $ /bin/ls letter
```

```
letter
```

```
/home/cis90/simben $
```

*A temporary workaround  
is to specify the full path  
to the command*

## Making a path

*Some commands still work without a path ... why?*

```
/home/cis90/simben $ echo "I want my path back"  
I want my path back
```

```
/home/cis90/simben $ type echo  
echo is a shell builtin
```

```
/home/cis90/simben $ type type  
type is a shell builtin
```

## Making a path

### Fixing the path, one directory at a time ...

```
/home/cis90/simben $ ls letter
-bash: ls: No such file or directory
```

/home/cis90/simben \$ **PATH=/bin** *The **ls** command is in /bin so lets put that on the path*

/home/cis90/simben \$ **ls letter**  
letter

```
/home/cis90/simben $ stat letter
-bash: stat: command not found
```

/home/cis90/simben \$ **PATH=\$PATH:/usr/bin**

/home/cis90/simben \$ **stat letter**

*The **stat** command is in /usr/bin so lets append that directory too*

```
File: `letter'
Size: 1059          Blocks: 16          IO Block: 4096
regular file
Device: fd00h/64768d    Inode: 102594      Links: 1
Access: (0644/-rw-r--r--)  Uid: ( 1000/simben90)  Gid: (
90/  cis90)
Access: 2012-04-30 15:43:28.000000000 -0700
Modify: 2012-03-20 10:31:30.000000000 -0700
Change: 2012-04-30 07:34:30.000000000 -0700
```

## Making a path

```
/home/cis90/simben $ allscripts
-bash: allscripts: command not found
```

The **allscripts** shell script is in `/home/cis90/bin` so let's add that directory to the path as well

```
/home/cis90/simben $ PATH=$PATH:/home/cis90/bin
/home/cis90/simben $ allscripts
```

```
*****
*                               *

99) Exit

Enter Your Choice:
```

## Making a path

```
/home/cis90/simben $ datecal  
bash: datecal: command not found
```

The **datecal** shell script is in your own bin directory so lets add that to the path as well

```
/home/cis90/simben $ PATH=$PATH:/home/cis90/simben/bin  
/home/cis90/simben $ datecal
```

```
Tue May 8 14:30:59 PDT 2012
```

April 2012							May 2012							June 2012						
Su	Mo	Tu	We	Th	Fr	Sa	Su	Mo	Tu	We	Th	Fr	Sa	Su	Mo	Tu	We	Th	Fr	Sa
1	2	3	4	5	6	7			1	2	3	4	5						1	2
8	9	10	11	12	13	14	6	7	8	9	10	11	12	3	4	5	6	7	8	9
15	16	17	18	19	20	21	13	14	15	16	17	18	19	10	11	12	13	14	15	16
22	23	24	25	26	27	28	20	21	22	23	24	25	26	17	18	19	20	21	22	23
29	30						27	28	29	30	31			24	25	26	27	28	29	30

```
/home/cis90/simben $
```

## Making a path

```
/home/cis90/simben $ dogbone
```

```
-bash: dogbone: command not found
```

```
/home/cis90/simben $ ./dogbone
```

```
What is your name? Benji
```

```
What is your favorite bone? Chicken
```

```
Hi Benji, your favorite bone is Chicken
```

*A temporary workaround is to put a ./ in front of the command*

*How can I run a script in the current directory without having to put a ./ in front of it?*

## Making a path

*Easy ... add the "." directory to the path*

```
/home/cis90/simben $ dogbone
```

```
-bash: dogbone: command not found
```

```
/home/cis90/simben $ PATH=$PATH:.
```

```
/home/cis90/simben $ dogbone
```

```
What is your name? Benji
```

```
What is your favorite bone? Chicken
```

```
Hi Benji, your favorite bone is Chicken
```

## Making a path

### *Rebuilding the path by appending directories one at a time*

```
/home/cis90/simben $ unset PATH
/home/cis90/simben $ echo $PATH
```

```
/home/cis90/simben $ PATH=/bin
/home/cis90/simben $ echo $PATH
/bin
```

*Start with /bin which has all the essential UNIX/Linux commands*

```
/home/cis90/simben $ PATH=$PATH:/usr/bin
/home/cis90/simben $ echo $PATH
/bin:/usr/bin
```

*Append /usr/bin which has hundreds of additional UNIX/Linux commands*

```
/home/cis90/simben $ PATH=$PATH:/home/cis90/bin
/home/cis90/simben $ echo $PATH
/bin:/usr/bin:/home/cis90/bin
```

*Append the CIS 90 class bin directory*

```
/home/cis90/simben $ PATH=$PATH:/home/cis90/simben/bin
/home/cis90/simben $ echo $PATH
/bin:/usr/bin:/home/cis90/bin:/home/cis90/simben/bin
```

*Append your own student bin directory*

```
/home/cis90/simben $ PATH=$PATH:.
/home/cis90/simben $ echo $PATH
/bin:/usr/bin:/home/cis90/bin:/home/cis90/simben/bin:.
```

*Append the current directory*

└──────────┘
└──────────┘
└──┘  
*CIS 90 class bin directory*
*Student bin directory*
*Current directory*

## .bash\_profile

### *Making the path permanent using .bash\_profile*

```

/home/cis90/simben $ cat .bash_profile
# .bash_profile

# Get the aliases and functions
if [ -f ~/.bashrc ]; then
    . ~/.bashrc
fi

# User specific environment and startup programs

PATH=$PATH:/home/cis90/bin:$HOME/bin:.
BASH_ENV=$HOME/.bashrc
USERNAME=""
PS1='$PWD $ '
export USERNAME BASH_ENV PATH
umask 002
set -o ignoreeof
stty susp
eval `tset -s -m vt100:vt100 -m :\?${TERM:-ansi} -r -Q `

/home/cis90/simben $

```

*This customizes the normal path by appending the class bin directory, the student's bin directory and the "current" directory*

# Extra Credit Special Answer

## Extra Credit Special (from Lesson 12)

1) *Why did the prompt change?*

```
/home/cis90/simben $ bash  
[simben@opus ~]$ exit  
exit  
/home/cis90/simben $
```

2) *What command could be issued prior to the bash command above that would prevent the prompt from changing?*

For 2 points extra credit, email [risimms@cabrillo.edu](mailto:risimms@cabrillo.edu) answers to **both** questions before the Lesson 13 class starts

# Lesson 12

# Review

## The rules of the road for variables

**Process Rule #1:** When a shell forks a child, only copies of exported variables are made available to the child.

**Process Rule #2:** A child can modify the variables it receives but those modifications will not change the parent's variables.

▪ and **SOURCE**

`▪ <script-name>`  
`source <script-name>` } *equivalent*

Sometimes it is desirable to run a shell script that will initialize or change shell variables in the parent environment.

To do this, the shell (bash) provides a `▪` (dot) or **source** command, which instructs the shell to execute the shell script itself, without spawning a child process to run the script, and then continue on where it left off.

In the generic example above, the commands in the file `<script-name>` are run by the parent process, and therefore, any changes made to the environment will last for the duration of the login session.

# exec command

**exec** *<command>*

If a UNIX command is run using the **exec** *<command>*, the bash code in the process is overlaid by the *<command>* code, when finished the process will terminate.

For example:

**exec clear**

This will have the effect of clearing the screen and logging off the computer

# grok that?

## The flowers script /home/cis90/bin/flowers

```
#!/bin/bash
#
# Useful alias:
#   alias go='echo roses are \"$roses\" and violets are \"$violets\"'
#
echo
echo "==> Entering child process <=="
ps -f
echo "==> showing variables in child <=="
echo "  " roses are '$roses'
echo "  " violets are '$violets'
echo "==> setting variables in child <=="
roses=black
violets=orange
echo "  " roses are '$roses'
echo "  " violets are '$violets'
echo "==> Leaving child process <=="
echo
```

*Show the parent, child and the ps processes*

*Show the values of the roses and violets variables*

*Set the values of the roses and violets variables to new values*

# The flowers script

/home/cis90/bin/flowers

Use the **flowers** script to test your understanding of how variables are handled with child processes

## The flowers script /home/cis90/bin/flowers

```
/home/cis90/simben $ flowers
```

```
==> Entering child process <==
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
simben90	17518	17512	0	08:32	pts/0	00:00:00	-bash
simben90	17568	17518	0	08:33	pts/0	00:00:00	/bin/bash /home/cis90/bin/flowers
simben90	17575	17568	8	08:33	pts/0	00:00:00	ps -f

```
==> showing variables in child <==
```

```
roses are ""
```

```
violets are ""
```

```
==> setting variables in child <==
```

```
roses are "black"
```

```
violets are "orange"
```

```
==> Leaving child process <==
```

```
/home/cis90/simben $
```

```
#!/bin/bash
#
# Useful alias:
# alias go='echo roses are \"$roses\" and violets are \"$violets\"'
#
echo
echo "==> Entering child process <=="
ps -f
echo "==> showing variables in child <=="
echo "  roses are '$roses'"
echo "  violets are '$violets'"
echo "==> setting variables in child <=="
roses=black
violets=orange
echo "  roses are '$roses'"
echo "  violets are '$violets'"
echo "==> Leaving child process <=="
echo
```

## Create an alias to show variable values

*Note, the double quotes are escaped. We don't want bash to treat them as special metacharacters. We just want the double quotes preserved so they can be seen in the output of the echo command.*

```
/home/cis90/simben $ alias go='echo roses are \"$roses\" and violets are \"$violets\"'
```

```
/home/cis90/simben $ alias go  
alias go='echo roses are \"$roses\" and violets are \"$violets\"'
```

```
/home/cis90/simben $ go  
roses are "" and violets are ""
```

*Since there are no shell variables named roses or violets the echo command prints nothing for them.*

## Use the alias to show the values of the two variables

```
/home/cis90/simben $ go  
roses are "" and violets are ""
```

```
/home/cis90/simben $ roses=red  
/home/cis90/simben $ go  
roses are "red" and violets are ""
```

*Now the roses variable  
has been created and  
initialized*

```
/home/cis90/simben $ violets=blue  
/home/cis90/simben $ go  
roses are "red" and violets are "blue"
```

*Now the violets variable  
has been created and  
initialized*

## Use the alias to show the values of the two variables

```
/home/cis90/simben $ unset roses  
/home/cis90/simben $ go  
roses are "" and violets are "blue"
```

*Now the roses  
variable no longer  
exists*

```
/home/cis90/simben $ unset violets  
/home/cis90/simben $ go  
roses are "" and violets are ""
```

*Now the violets  
variable no longer  
exists*

## Activity

```
/home/cis90/simben $ roses=red; violets=blue  
/home/cis90/simben $ go  
roses are "red" and violets are "blue"  
/home/cis90/simben $ env | grep roses  
/home/cis90/simben $ env | grep violets  
/home/cis90/simben $ flowers
```

**Will the flowers script see the values of the roses and violets variables?**

*Write your answer in the chat window*

## ***NO**, the roses and violets variables were not exported*

```
/home/cis90/simben $ flowers
```

```
==> Entering child process <==
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
simben90	25106	25059	0	17:16	pts/8	00:00:00	-bash
simben90	27052	25106	0	17:19	pts/8	00:00:00	/bin/bash /home/cis90/bin/flowers
simben90	27059	27052	0	17:19	pts/8	00:00:00	ps -f

```
==> showing variables in child <==
```

```
roses are ""  
violets are ""
```

*The child cannot view the values of the parent's non-exported variables (Rule #1)*

```
==> setting variables in child <==
```

```
roses are "black"  
violets are "orange"
```

```
==> Leaving child process <==
```

```
/home/cis90/simben $
```

## Activity

```
/home/cis90/simben $ roses=red; violets=blue
/home/cis90/simben $ export roses
/home/cis90/simben $ env | grep roses
roses=red
/home/cis90/simben $ env | grep violets
/home/cis90/simben $ go
roses are "red" and violets are "blue"
/home/cis90/simben $ flowers
```

**Will the flowers script see the value of the roses variable or the violets variable?**

*Write your answer in the chat window*

## *Yes, the flowers script can see the roses variable now which was exported*

```
/home/cis90/simben $ flowers
```

```
==> Entering child process <==
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
simben90	25106	25059	0	17:16	pts/8	00:00:00	-bash
simben90	32147	25106	0	17:27	pts/8	00:00:00	/bin/bash /home/cis90/bin/flowers
simben90	32154	32147	0	17:27	pts/8	00:00:00	ps -f

```
==> showing variables in child <==
```

```
roses are "red"
```

```
violets are ""
```

*The child now sees the value of roses but not violets (Rule #1)*

```
==> setting variables in child <==
```

```
roses are "black"
```

```
violets are "orange"
```

```
==> Leaving child process <==
```

```
/home/cis90/simben $
```

## Activity

```
/home/cis90/simben $ roses=red; violets=blue
/home/cis90/simben $ export roses violets
/home/cis90/simben $ env | grep roses
roses=red
/home/cis90/simben $ env | grep violets
violets=blue
/home/cis90/simben $ go
roses are "red" and violets are "blue"
/home/cis90/simben $ flowers
```

**Will the flowers script change the values of the roses and violets variables?**

*Write your answer in the chat window*

## **No, the flowers script which runs as a child process cannot change the parent's variables**

```
/home/cis90/simben $ flowers
```

```
==> Entering child process <==
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
simben90	28732	28724	0	17:51	pts/0	00:00:00	-bash
simben90	29383	28732	0	18:11	pts/0	00:00:00	/bin/bash /home/cis90/bin/flowers
simben90	29390	29383	0	18:11	pts/0	00:00:00	ps -f

```
==> showing variables in child <==
```

```
roses are "red"
```

```
violets are "blue"
```

```
==> setting variables in child <==
```

```
roses are "black"
```

```
violets are "orange"
```

*The child can only change copies of the parents variables*

```
==> Leaving child process <==
```

```
/home/cis90/simben $ go
```

```
roses are "red" and violets are "blue"
```

```
/home/cis90/simben $
```

*The child cannot change the parent's variables (Rule #2)*

## Activity

```
/home/cis90/simben $ roses=red; violets=blue
/home/cis90/simben $ export roses violets
/home/cis90/simben $ env | grep roses
roses=red
/home/cis90/simben $ env | grep violets
violets=blue
/home/cis90/simben $ go
roses are "red" and violets are "blue"
/home/cis90/simben $ . flowers
```

**Will the flowers script change the values of the roses and violets variables?**

*Write your answer in the chat window*

***Yes, if sourced, flowers will not run as a child process and can change the parent's variables***

```
/home/cis90/simben $ . flowers
```

```
==> Entering child process <==
```

UID	PID	PPID	C	STIME	TTY	TIME	CMD
simben90	28732	28724	0	17:51	pts/0	00:00:00	-bash
simben90	29480	28732	0	18:15	pts/0	00:00:00	ps -f

```
==> showing variables in child <==
```

```
roses are "red"
```

```
violets are "blue"
```

```
==> setting variables in child <==
```

```
roses are "black"
```

```
violets are "orange"
```

```
==> Leaving child process <==
```

```
/home/cis90/simben $ go
```

```
roses are "black" and violets are "orange"
```

```
/home/cis90/simben $
```

```

/home/cis90/rodduk $ cat .bash_profile
# .bash_profile

# Get the aliases and functions
if [ -f ~/.bashrc ]; then
    . ~/.bashrc
fi

# User specific environment and startup programs

PATH=$PATH:$HOME/../../bin:$HOME/bin:..
BASH_ENV=$HOME/.bashrc
USERNAME=""
PS1='$PWD $ '
export USERNAME BASH_ENV PATH
umask 002
set -o ignoreeof
stty susp
eval `tset -s -m vt100:vt100 -m`

/home/cis90/rodduk $
    
```

*And now you know why the bash login scripts are sourced rather than run as child processes.*

*Note: the . (dot) and **source** commands are equivalent*

```

/home/cis90/rodduk $ cat .bashrc
# .bashrc

# User specific aliases and functions

# Source global definitions
if [ -f /etc/bashrc ]; then
    . /etc/bashrc
fi
alias print="echo -e"
    
```

## Activity

```
/home/cis90/simben $ roses=red; violets=blue
/home/cis90/simben $ export roses violets
/home/cis90/simben $ env | grep roses
roses=red
/home/cis90/simben $ env | grep violets
violets=blue
/home/cis90/simben $ go
roses are "red" and violets are "blue"
/home/cis90/simben $ exec flowers
```

**What will happen if flowers is exec'ed?**

*Write your answer in the chat window*

The flowers script runs to completion and  
your session ends

# Housekeeping

## Previous material and assignment

1. Lab 10 due by 11:59PM tonight
2. Use the **check10** script to check your work
3. After you submit your lab10 file you may comment out your riddle command in `.bash_profile`
4. The Extra Credit Labs X1 and X2 (30 points each) are available.
5. The Final Project is available and due in **two weeks**.

## Fall 2015 Linux Classes and Prerequisites

### CIS 90 Introduction to UNIX/Linux

Provides a technical overview of the UNIX/Linux operating system, including hands-on experience with commands, files, and tools.

Transfer Credit: CSU.

Section	Days	Times	Units	Instructor	Room
89005 &	W Arr.	01:00PM-04:05PM Arr.	3.00	R.Simms R.Simms	OL OL

Section 89005 is an ONLINE course. Meets weekly throughout the semester online during the scheduled times by remote technology with an additional 50 min online lab per week. For details, see instructor's web page at [go.cabrillo.edu/online](http://go.cabrillo.edu/online).

89006 &	W Arr.	01:00PM-04:05PM Arr.	3.00	R.Simms R.Simms	828 OL
------------	-----------	-------------------------	------	--------------------	-----------

Section 89006 is a Hybrid ONLINE course. Meets weekly throughout the semester at the scheduled times with an additional 50 min online lab per week. For details, see instructor's web page at [go.cabrillo.edu/online](http://go.cabrillo.edu/online).

### CIS 191AB UNIX/Linux Installation, Configuration and Administration

Introduces skills required to administer UNIX/Linux systems. Prerequisite: CIS 90 or equivalent skills.

Section	Days	Times	Units	Instructor	Room
88994	Arr.	Arr.	4.00	M.Matera	OL

Section 88994 is an ONLINE course. For details, see instructor's web page at [go.cabrillo.edu/online](http://go.cabrillo.edu/online).

88995 &	TH Arr.	01:00PM-05:05PM Arr.	4.00	M.Matera M.Matera	828 OL
------------	------------	-------------------------	------	----------------------	-----------

Section 88995 is a Hybrid ONLINE course. Meets weekly throughout the semester at the scheduled times with an additional 50 min online lab per week. For details, see instructor's web page at [go.cabrillo.edu/online](http://go.cabrillo.edu/online).

### CIS 81 Networking Fundamentals and Theory (Cisco CCNA 1)

Presents networking protocols, standards, concepts, and terminology including Ethernet, ARP, ICMP, IP addressing, subnetting, switches, hubs, routers, TCP, UDP, OSI Model and other standards and protocols. Hybrid Requisite: Completion of or concurrent enrollment in CIS 72. Recommended Preparation: Eligibility for MATH 154.

Transfer Credit: CSU.

Section	Days	Times	Units	Instructor	Room
89002 &	M Arr.	09:30AM-01:35PM Arr.	4.00	R.Graziani R.Graziani	828 OL

Section 89002 is a Hybrid ONLINE course. Meets weekly throughout the semester at the scheduled times with an additional 50 min online lab per week. Students will be required to show that they meet the course prerequisites. For details, see instructor's web page at [go.cabrillo.edu/online](http://go.cabrillo.edu/online).

*CIS 81 is a prerequisite to CIS 192 Linux Network Administration offered next spring*

## Final Exam

Test #3 (final exam) is **MONDAY** May 18 7-9:50AM

<b>Monday</b>	5/18	<b>Test #3 (the final exam)</b>		<u>5 posts</u> <u>Lab X1</u> <u>Lab X2</u>
		<b>Time</b> <ul style="list-style-type: none"> <li>7:00AM - 9:50AM in Room 828</li> </ul> <b>Materials</b> <ul style="list-style-type: none"> <li>Test (<u>blackboard</u>)</li> </ul> <b>CCC Confer</b> <ul style="list-style-type: none"> <li><u>Enter virtual classroom</u></li> <li><u>Class archives</u></li> </ul>		

*Extra credit  
labs and  
final posts  
due by  
11:59PM*

- All students will take the test at the same time. The test must be completed by 9:50AM.
- Working and long distance students can take the test online via CCC Confer and BlackBoard.
- Working students will need to plan ahead to take time off from work for the test.

## Monitoring your grades

### Points that could have been earned:

9 quizzes:	27 points
9 labs:	270 points
2 tests:	60 points
3 forum quarters:	60 points
<b>Total:</b>	<b>417 points</b>

### The CIS 90 website

*Send me your survey to get your LOR code name.*

<http://simms-teach.com/cis90grades.php>

### Or on Opus

**checkgrades codename**  
(where codename is your LOR codename)

*The checkgrades script was written by Jessie a past CIS 90 Alumnus*

Percentage	Total Points	Letter Grade	Pass/No Pass
90% or higher	504 or higher	A	Pass
80% to 89.9%	448 to 503	B	Pass
70% to 79.9%	392 to 447	C	Pass
60% to 69.9%	336 to 391	D	No pass
0% to 59.9%	0 to 335	F	No pass

*At the end of the term I'll add up all your points and assign you a grade using this table*

### New Class Server Commands

Post Reply Search this topic... 1 post • Page 1 of 1

**New Class Server Commands**  
by Samuel Tindell • Mon Apr 27, 2015 1:52 am

Hi all,  
My name is Sam.

You can do cool stuff on the class server Opus with the following commands:

- \$ grades <lotr name>
- \$ forums
- \$ schedule
- \$ tips

Hopefully you find them helpful.  
I wrote these last semester when I was a CIS90 student  
Now they are updated, just for you!

**grades** : see your current grade in the class, your score on various assignments, how many points you need for an A, B, C, etc. and show you the remaining points in the semester

**forums** : browse the CIS phpbbs forums from the command line

**schedule** : view the remaining dates/assignments in the semester

**tips** : view some random linux/bash tips at any time

These were written with Python. They are scripts, made up of multiple files, that scrape Rich's website and display information for you on the command line.

You can view the files by browsing to the following Opus directory:  
/home/cis90/cis/check-grades

I am a huge python noob.  
So if you'd like to clean up the code, mess around with it, or contribute your own changes, copy it out of check-grades on Opus or git clone it and go to town:  
<https://github.com/sjtindell/check-grades>

If you'd like to contribute to the forums module only, I keep that here:  
<https://github.com/sjtindell/phpbb-browser>

If you'd like to learn about Git, SQLite, Python, HTTP Network Programming, or any other topics handled here, this is a great simple place to start! Just ask me. [sjtindell@gmail.com](mailto:sjtindell@gmail.com)

Post Reply 1 post • Page 1 of 1

Sams' commands are available again:

**grades <LOR code name>**  
**forums**  
**schedule**  
**tips**

## Want some help working the labs?

*If you would like some additional come over to the CIS Lab. There are student lab assistants and instructors there to help you.*

*Nick, Sean, and Geoff are CIS 90 Alumni.*

*Tess and Mike F. are in our class!*

*Michael M. is the other Linux instructor.*

*I'm in there Wednesdays 3:00-5:30pm.*

## Introduction

Post Reply Search this topic... 2 posts • Page 1 of 1

**Introduction** by **Geoffrey Montague** » Fri Mar 20, 2015 12:01 pm

Hello CIS 90!

I just wanted to introduce myself to those I haven't yet met in the class. I'm a student assistant that works in the STEM Center (Room 830). I'm there Mondays and Wednesdays from 3:30 to 8:30, and Fridays 11:30 to 3. Feel free to stop by anytime with CIS 90 questions or just to say hello. There are also other awesome student assistants and instructors that are there to help you. Here is the schedule for those who work in the CIS Department at the STEM Center: <http://webhawks.org/~cislab/>. Additionally if you would like to schedule a workshop with me you can send me an email (gmontague0205 (AT) gmail.com), and I will try to respond back within 24 hours.

Cheers!

-Geoff

# More CIS 90 Tutoring Available

The screenshot shows a forum post on the phpBB website. The header includes the phpBB logo and the forum title 'Cabrillo College: Computer and Information Systems'. The post is titled 'Tutoring Available' and was posted by Takashi Tamasu on Wednesday, March 11, 2015, at 9:45 am. The post content reads: 'Hi all, I am the Alpha Gamma Sigma tutoring coordinator and there are free tutoring available for your class. As a campus community service, AGS students tutor other Cabrillo Students FREE of charge. In exchange for their time and energy, tutors receive service points towards their AGS membership requirement and awards. There are paper forms next to the AGS inbox or you can do it online via <http://goo.gl/forms/sHHfZkSc8f>'. The user profile for Takashi Tamasu is shown on the right, indicating 105 posts and a join date of Wednesday, January 29, 2014, at 2:46 pm. The forum navigation bar shows the current path: Board index > Cabrillo College Spring 2015 Courses > CIS 90 - Spring 2015.

# Scripting

# Shell Scripts

- In its simplest form a shell script can just be a list of commands in a file
- Execute "x" permissions must be enabled on the script file.
- The script must either be on your path or you must use an absolute pathname to run it.

## Shell Script Examples

```
/home/cis90/milhom/bin $ vim toddler
```

```
milhom90@oslab:~/bin
#!/bin/bash
# This is a simple script for CIS 90
echo Hello $LOGNAME
date
tty
hostname
exit
~
~
~
~
~
~
-- INSERT --
```

use **Esc** :wq to save file and quit vi

```
/home/cis90/milhom/bin $ chmod 750 toddler
```

```
/home/cis90/milhom/bin $ toddler
```

```
Hello milhom90
```

```
Mon Nov 25 17:57:15 PST 2013
```

```
/dev/pts/9
```

```
oslab.cishawks.net
```

# Shell Script Examples

```
/home/cis90/milhom/bin $ vim dogbone
```

```
milhom90@oslab:~/bin
#!/bin/bash
# Simple interactive script
echo -n "What is your name? "
read NAME
echo -n "What is your favorite bone? "
read BONE
echo "Hi $NAME, your favorite bone is $BONE"
exit 0

~
~
~
~
:wq
```

*This is now an interactive script*

use  **:wq** to save file and quit vi

```
/home/cis90/milhom/bin $ vim dogbone
```

```
/home/cis90/milhom/bin $ chmod 750 dogbone
```

```
/home/cis90/milhom/bin $ dogbone
```

```
What is your name? Homer
```

```
What is your favorite bone? Turkey
```

```
Hi Homer, your favorite bone is Turkey
```

# Final Project myscript

```

milhom90@oslab:~/bin
#!/bin/bash
#
# menu: A simple menu template
#
while true
do
    clear
    echo -n "
        CIS 90 Final Project
    1) Task 1
    2) Task 2
    3) Task 3
    4) Task 4
    5) Task 5
    6) Exit

    Enter Your Choice: "
    read RESPONSE
    case $RESPONSE in
        1)    # Commands for Task 1
            ;;
        2)    # Commands for Task 2
            ;;
        3)    # Commands for Task 3
            ;;
        4)    # Commands for Task 4
            ;;
        5)    # Commands for Task 5
            ;;
        6)    exit 0
            ;;
        *)    echo "Please enter a number between 1 and 6"
            ;;
    esac
    echo -n "Hit the Enter key to return to menu "
    read dummy
done
~

```

*You will modify and extend this script for your final project*

# Final Project

*If you did not do this last week, please do so now*

## Getting Started

- 1) On Opus, cd to your home directory and enter:  
**cp ../depot/myscript bin/**
- 2) Give your script execute permissions with:  
**chmod +x bin/myscript**
- 3) Run the script:  
**myscript**

# Final Project

```
simben90@oslab:~

Enter Your Choice: █
```

*Before leaving class today you  
want to make sure can run  
your **myscript** from **allscripts***

# Final Project Grading Rubric

Grading rubric (60 points maximum)

Possible Points	Requirements
30	Implementing all five tasks (6 points each): <ul style="list-style-type: none"> <li>• Requirements for each task:               <ul style="list-style-type: none"> <li>- Minimum of 10 "original" script command lines</li> <li>- Has comments to explain what it does</li> <li>- Has user interaction</li> </ul> </li> </ul>
25	You don't have to do all of these but do at least five: <ul style="list-style-type: none"> <li>• Redirecting stdin (5 points)</li> <li>• Redirecting stdout (5 points)</li> <li>• Redirecting stderr (5 points)</li> <li>• Use of permissions (5 points)</li> <li>• Use of filename expansion characters (5 points)</li> <li>• Use of absolute path (5 points)</li> <li>• Use of relative path (5 points)</li> <li>• Use of a PID (5 points)</li> <li>• Use of inodes (5 points)</li> <li>• Use of links (5 points)</li> <li>• Use of a GID or group (5 points)</li> <li>• Use of a UID or user (5 points)</li> <li>• Use of a signal (5 points)</li> <li>• Use of piping (5 points)</li> <li>• Use of an environment variable (5 points)</li> <li>• Use of /bin/mail (5 points)</li> <li>• Use of a conditional (5 points)</li> </ul> The maximum for this section are 25 points.
5	Present your script in front of the class
<b>Points lost</b>	
-15	Fails to run from <b>allscripts</b>
-15	Other students in the class are unable to read and execute your script.
-15	Error messages are displayed when running one or more tasks
-up to 90	No credit for any task which contains unoriginal script code that: <ul style="list-style-type: none"> <li>• Doesn't give full credit to the original author</li> <li>• Doesn't indicate where the code was obtained from</li> <li>• Doesn't include licensing terms</li> <li>• Violates copyright or licensing terms</li> </ul>
<b>Extra credit</b>	
30	Up to three additional tasks (10 points each)

[rsimms@oslab ~]$

```

*Which myscript files cannot be run by classmates?*

## Class Activity

Note: One of the requirements for the final project is setting permissions on your script so that all cis90 members can read and run it.

To meet this requirement use:

```
cd  
chmod 750 bin bin/myscript  
ls -ld bin bin/myscript
```

umask  
again!

# Permissions

Why can other classmates write to my scripts?

## *Before Lab 10*

```
/home/cis90/simben/bin $ umask
0002
/home/cis90/simben $ rm newscript; touch newscript
/home/cis90/simben $ ls -l newscript
-rw-rw-r-- 1 simben cis90 0 Nov 23 16:17 newscript
/home/cis90/simben $ chmod +x newscript
/home/cis90/simben $ ls -l newscript
-rwxrwxr-x 1 simben cis90 0 Nov 23 16:17 newscript
```

## *After Lab 10*

```
/home/cis90/simben $ umask
0006
/home/cis90/simben $ rm newscript; touch newscript
/home/cis90/simben $ ls -l newscript
-rw-rw---- 1 simben cis90 0 May 12 08:44 newscript
/home/cis90/simben $ chmod +x newscript
/home/cis90/simben $ ls -l newscript
-rwxrwx--x 1 simben cis90 0 May 12 08:44 newscript
```

*Because your umask setting allows group members to have write permission on any new files you create!*

# Permissions

```
[rodduk90@opus bin]$ cat /home/cis90/rodduk/.bash_profile
```

```
# .bash_profile
```

```
# Get the aliases and functions
```

```
if [ -f ~/.bashrc ]; then
```

```
    . ~/.bashrc
```

```
fi
```

```
# User specific environment and startup programs
```

```
PATH=$PATH:$HOME/../../bin:$HOME/bin:..
```

```
BASH_ENV=$HOME/.bashrc
```

```
USERNAME=""
```

```
PS1='$PWD $ '
```

```
export USERNAME BASH_ENV PATH
```

```
umask 002
```

```
set -o ignoreeof
```

```
stty susp
```

```
eval `tset -s -m vt100:vt100 -m :\?${TERM:-ansi} -r -Q `
```

*Note your umask is defined in .bash\_profile which runs every time you login. In lab 10 you change this setting to 006.*

## Class Activity

- Change your umask to 026
- Can group or other users modify future new files now?
- Try it, **touch** a new file and check the permissions with **ls -l**
- How would you make this a permanent umask setting?

# Final Project Getting Started

# What takes longer?

**Writing the script?**

**Or deciding what to script?**

One way to get started ... select a random command to build a script around

### Commands

|        |         |        |       |
|--------|---------|--------|-------|
| .      | echo    | lpstat | sort  |
| at     | env     | ls     | spell |
| banner | exit    | mail   | su    |
| bash   | export  | man    | tail  |
| bc     | file    | me     | tee   |
| cal    | find    |        | touch |
| cancel | finger  | more   | type  |
| cat    | grep    | mv     | umask |
| cd     | head    | passwd | uname |
| chgrp  | history |        | unset |
| chmod  | id      |        | vi    |
| chown  | jobs    | rm     | wc    |
| clear  | kill    | rmdir  | who   |
| cp     | ln      | st     | write |
| date   | lp/lpr  | sleep  | xxd   |

*For this example we will pick the grep command*

# Research your command by reading the man page and googling examples

The image shows two overlapping windows. The background window is a terminal window titled 'rsimms@opus:~/cis90/project' displaying the man page for 'grep'. The foreground window is a web browser showing search results for 'linux grep command examples'.

**Terminal Window (man grep):**

```

GREP (1)
NAME
    grep, egrep, fgrep - print lines matching a pattern

SYNOPSIS
    grep [options] PATTERN [FILE...]
    grep [options] [-e PATTERN | -f FILE] [FILE...]

DESCRIPTION
    Grep searches the named input FILES (or standard input, if no files are
    named, or the file name - is given) for lines containing the pattern
    given PATTERN. By default, grep prints the matching lines.

    In addition, two variant programs egrep and fgrep are provided. Egrep
    is the same as grep -E. Fgrep is the same as grep -F.

OPTIONS
    -A NUM, --after-context=NUM
        Print NUM lines of trailing context after matching lines. This
        option is only valid when -n, -o, or -x is also specified. If
        line containing -- between contiguous groups of options.

    -a, --text
        Process a binary file as if it were text; this option is only
        valid when used with -a. --binary-files=text option.

    -B NUM, --before-context=NUM
        Print NUM lines of leading context before matching lines. This
        option is only valid when -n, -o, or -x is also specified. If
        line containing -- between contiguous groups of options.
    
```

**Web Browser Window (Google Search Results):**

A NUM, --after-context=NUM Print NUM lines of trailing context after matching ...

*Review the various options and arguments for the command*

Next, decide what you want to do with the command you selected. For this example we will:

1. Start a new task in **myscript**
2. Customize the menu for the new task
3. Start with a simple **grep** command
4. Add some simple interaction
5. Add successive grep commands that experiment with different options
6. Iterate till happy with it.

## Start hacking the menu!

*Customize the menu options for Task 1*

*After*

```
rodduk90@oslab:~/bin
#!/bin/bash
#
# menu: A simple menu template
#
while true
do
    clear
    echo -n "

← → C www.catb.org/jargon/html/H/hacker.html

**hacker:** n.

[originally, someone who makes furniture with an axe]

1. A person who enjoys exploring the details of programmable systems and how to stretch their capabilities, as opposed to most users, who prefer to learn only the minimum necessary. RFC1392, the *Internet Users' Glossary*, usefully amplifies this as: A person who delights in having an intimate understanding of the internal workings of a system, computers and computer networks in particular.
2. One who programs enthusiastically (even obsessively) or who enjoys programming rather than just theorizing about programming.
3. A person capable of appreciating [hack value](#).
4. A person who is good at programming quickly.
5. An expert at a particular program, or one who frequently does work using it or on it; as in 'a Unix hacker'. (Definitions 1 through 5 are correlated, and people who fit them congregate.)
6. An expert or enthusiast of any kind. One might be an astronomy hacker, for example.
7. One who enjoys the intellectual challenge of creatively overcoming or circumventing limitations.
8. [deprecated] A malicious meddler who tries to discover sensitive information by poking around. Hence password hacker, network hacker. The correct term for this sense is [cracker](#).

The term 'hacker' also tends to connote membership in the global community defined by the net (see [the network](#). For discussion of some of the basics of this culture, see the [How To Become A Hacker](#) FAQ. It also implies that the person described is seen to subscribe to some version of the hacker ethic (see [hacker ethic](#)).

It is better to be described as a hacker by others than to describe oneself that way. Hackers consider themselves something of an elite (a meritocracy based on ability), though one to which new members are gladly welcome. There is thus a certain ego satisfaction to be had in identifying yourself as a hacker (but if you claim to be one and are not, you'll quickly be labeled [bogus](#)). See also [geek](#), [wannabee](#).

This term seems to have been first adopted as a badge in the 1960s by the hacker culture surrounding TMRC and the MIT AI Lab. We have a report that it was used in a sense close to this entry's by teenage radio hams and electronics tinkerers in the mid-1950s.

*Hacking (building, exploring) is not cracking (malicious)*

reft,
/home/cis90/rodduk/poems/Shakespeare/sonnet7:Yet mortal looks adore his beauty s
till,
/home/cis90/rodduk/poems/Shakespeare/sonnet9:But beauty's waste hath in the worl
d an end,
/home/cis90/rodduk/poems/Yeats/old:And loved your beauty with love false or true
,
Hit the Enter key to return to menu
    
```

Fix worked! 😄

Fix task in 1<sup>st</sup> window by using an absolute pathname then save with **<esc>:w**

Re-run **myscript** in the 2<sup>nd</sup> second window and test your change. To do this quickly hit **Ctrl-C** then **<up arrow>** key.

```

/home/cis90/rodduk/poems/Shakespeare/sonnet5:Beauty's effect with beauty were bereft,
/home/cis90/rodduk/poems/Shakespeare/sonnet7:Yet mortal looks adore his beauty still,
/home/cis90/rodduk/poems/Shakespeare/sonnet9:But beauty's waste hath in the world an end,
/home/cis90/rodduk/poems/Yeats/old:And loved your beauty with love false or true,
/home/cis90/rodduk $

## How many points so far?

*Let's score our mini-script so far*

```
1) # Commands for Task 1
echo "Are you ready to search for beauty in the poems?"
read dummy
grep -h beauty /home/cis90/rodduk/poems/*/*
echo "Ready to count them?"
read dummy
grep -h beauty /home/cis90/rodduk/po
;;
```

Implementing all five tasks (6 points each):

- Requirements for each task:
- NO** -Minimum of 10 "original" script command lines
- NO** -Has one or more non-generic comments to explain what it is doing
- ✓ -Has user interaction

You don't have to do all of these but do at least five:

- Redirecting stdin (5 points)
- Redirecting stdout (5 points)
- Redirecting stderr (5 points)
- Use of permissions (5 points)
- ✓ • Use of filename expansion characters (5 points)
- ✓ • Use of absolute path (5 points)
- Use of relative path (5 points)
- Use of a PID (5 points)
- Use of inodes (5 points)
- Use of links (5 points)
- Use of scheduling (5 points)
- Use of a GID or group (5 points)
- Use of a UID or user (5 points)
- Use of a /dev/tty device (5 points)
- Use of a signal (5 points)
- ✓ • Use of piping (5 points)
- Use of an environment variable (5 points)
- Use of /bin/mail (5 points)
- Use of a conditional (5 points)

The maximum for this section is 25 points.

# Make another enhancement

Enhance script to let user specify search string and use color

```

1) # Commands for Task 1
echo "Are you ready to search for beauty in the poems?"
read dummy
grep -h beauty /home/cis90/rodduk/poems/*/*
echo "Ready to count them?"

2) read dummy
3) grep -h beauty /home/cis90/rodduk/poems/*/* | wc -l
4) echo "Enter a new string to search for"
5) read string
6) echo searching for '$string'
grep -h --color $string /home/cis90/rodduk/poems/*/*

;;

```

```

read dummy
grep -h beauty /home/cis90/rodduk/poems/*/*
echo "Ready to count them?"
read dummy
grep -h beauty /home/cis90/rodduk/poems/*/* | wc -l
echo "Enter a new string to search for"
read string
echo searching for '$string'
grep -h --color $string /home/cis90/rodduk/poems/*/*
;;

```

```

rodduk90@oslab:~/bin
5) Task 5
6) Exit

Enter Your Choice: 1
Are you ready to search for beauty in the poems?

That thereby beauty's rose might never die,
That beauty still may live in thine or thee.
Herein lives wisdom, beauty, and increase;
If I could write the beauty of your eyes,
And dig deep trenches in thy beauty's field,
Then being ask'd, where all thy beauty lies,
How much more praise deserv'd thy beauty's use,
Proving his beauty by succession thine.
Upon thyself thy beauty's legacy?
Thy unus'd beauty must be tomb'd with thee,
Beauty's effect with beauty were bereft,
Yet mortal looks adore his beauty still,
But beauty's waste hath in the world an end,
And loved your beauty with love false
Ready to count them?

14
Enter a new string to search for
sweet
searching for "sweet"
Thyself thy foe, to thy sweet self too cruel.
To show me worthy of thy sweet respect:
To thy sweet will making addition thus.
Thou of thyself thy sweet self dost deceive,
Leese but their show, their substance still lives sweet.
Hit the Enter key to return to menu

```

And it works!

## Check the score again

### Let's re-score modified script

```
1) # Commands for Task 1
echo "Are you ready to search for beauty in the poems?"
read dummy
grep -h beauty /home/cis90/rodduk/poems/*/*
echo "Ready to count them?"
read dummy
grep -h beauty /home/cis90/rodduk/poems/*/*
echo "Enter a new string to search for"
read string
echo searching for "'$string'"
grep -h --color $string /home/cis90/rodduk/poems/*/*
;;
```

#### Implementing all five tasks (6 points each):

- Requirements for each task:
  - ✓ -Minimum of 10 "original" script command lines
  - NO -Has one or more non-generic comments to explain what it is doing
  - ✓ -Has user interaction

#### You don't have to do all of these but do at least five:

- Redirecting stdin (5 points)
- Redirecting stdout (5 points)
- Redirecting stderr (5 points)
- Use of permissions (5 points)
- ✓ • Use of filename expansion characters (5 points)
- ✓ • Use of absolute path (5 points)
- Use of relative path (5 points)
- Use of a PID (5 points)
- Use of inodes (5 points)
- Use of links (5 points)
- Use of scheduling (5 points)
- Use of a GID or group (5 points)
- Use of a UID or user (5 points)
- Use of a /dev/tty device (5 points)
- Use of a signal (5 points)
- ✓ • Use of piping (5 points)
- Use of an environment variable (5 points)
- Use of /bin/mail (5 points)
- Use of a conditional (5 points)

The maximum for this section is 25 points.

## Bing - one task done that meets minimum requirements!

*Add some comments to help others understand what you are doing*

```
1) # Task 1 - grep command explored

# Simple grep for "beauty"
echo "Are you ready to search for beauty in the poems?"
read dummy
grep -h beauty /home/cis90/rodduk/poem

# Same as before but counts matches to
echo "Ready to count them?"
read dummy
grep -h beauty /home/cis90/rodduk/poem

# Prompt user to supply search string
echo "Enter a new string to search for"
read string
echo searching for "'$string'"
grep -h $string /home/cis90/rodduk/poem
;;
```

Implementing all five tasks (6 points each):

- Requirements for each task:
  - ✓ -Minimum of 10 "original" script command lines
  - ✓ -Has one or more non-generic comments to explain what it is doing
  - ✓ -Has user interaction

You don't have to do all of these but do at least five:

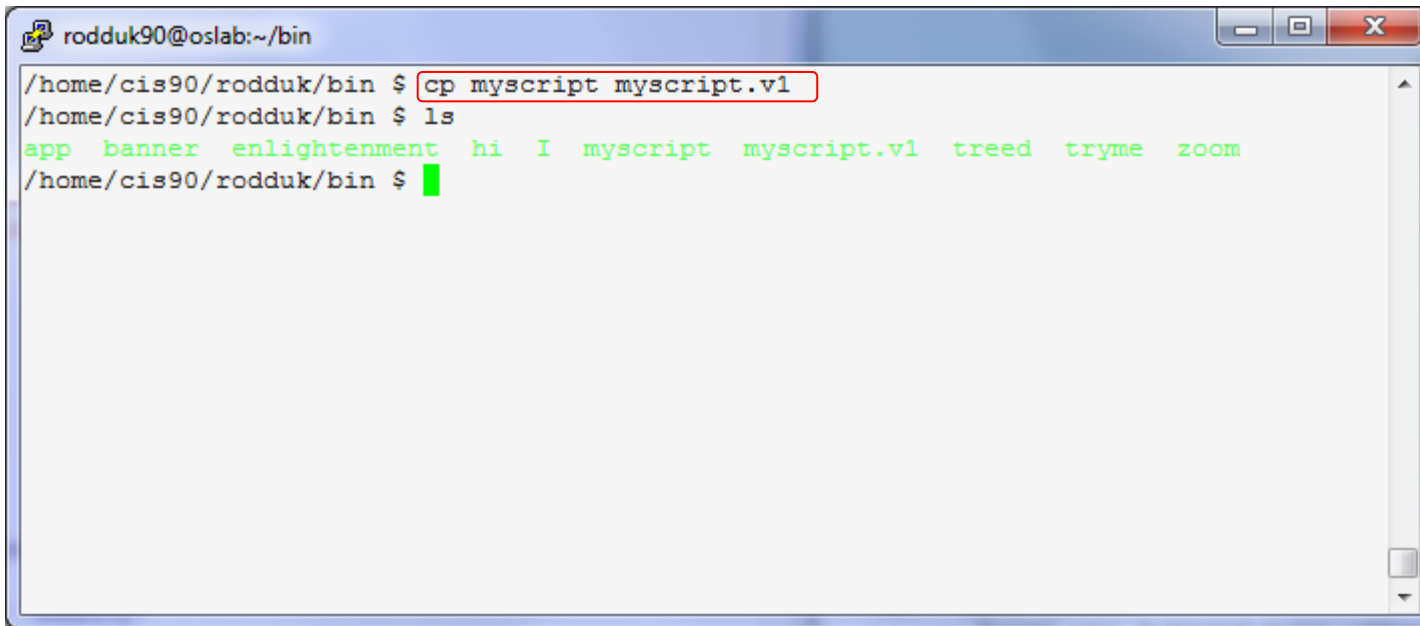

- Redirecting stdin (5 points)
- Redirecting stdout (5 points)
- Redirecting stderr (5 points)
- Use of permissions (5 points)
- ✓ Use of filename expansion characters (5 points)
- ✓ Use of absolute path (5 points)
- Use of relative path (5 points)
- Use of a PID (5 points)
- Use of inodes (5 points)
- Use of links (5 points)
- Use of scheduling (5 points)
- Use of a GID or group (5 points)
- Use of a UID or user (5 points)
- Use of a /dev/tty device (5 points)
- Use of a signal (5 points)
- ✓ Use of piping (5 points)
- Use of an environment variable (5 points)
- Use of /bin/mail (5 points)
- Use of a conditional (5 points)

The maximum for this section is 25 points.

*And has fulfilled three of the five requirements for the overall project!*

## Backup your work!

`cp myscript myscript.v1` *after first day of work*

```

rodduk90@oslab:~/bin
/home/cis90/rodduk/bin $ cp myscript myscript.v1
/home/cis90/rodduk/bin $ ls
app banner enlightenment hi I myscript myscript.v1 treed tryme zoom
/home/cis90/rodduk/bin $
  
```

`cp myscript myscript.v2` *after second day of work*

`cp myscript myscript.v3` *and so on ...*

`cp myscript myscript.v4`

*Always be able to revert back to an earlier version in case you clobber the current one!*

# Testing your script

*The ask others on the forum to check your script and give you feedback*

## Plan extra time for:

- Figuring out how to do what you really want to do!
- Removing syntax errors
- Removing logic errors
- Posting script code on the forum and asking others to view it and suggest how to fix it
- Sleeping on it

*Don't wait till the last minute  
to start your project!*

# Final Project forum tips

## Use the forum effectively to get scripting help

*Not so good ...*

**Preview:**

Help!

My script is getting weird error

- Homer

*Not enough information has been provided  
on this post for others to help*

## Use the forum effectively to get scripting help

*Better ... but requires viewer to log into Opus and you may have modified the script since posting*

### Preview:

Help!

My script is getting weird error

My script is here:

/home/cis90/milhom/bin/myscript

And this is the error:

CODE: SELECT ALL

```
/home/cis90/simben/bin $ ./script99
simben90
-rwxr-x--- 1 simben90 cis90 10489 Apr 30 07:33 /home/cis90/simben/bin/myscript
./script99: line 8: unexpected EOF while looking for matching `"'
./script99: line 16: syntax error: unexpected end of file
/home/cis90/simben/bin $
```

- Homer

*This post provides the location of the script and the error message which enables others to help you find and fix the problem*

## Use the forum effectively to get scripting help

### Preview:

Help!

My script is getting weird error

This is the script:

CODE: SELECT ALL

```
#!/bin/bash
# Test script
#
echo $LOGNAME
dir=/home/cis90/simben
ls -l $dir/bin/myscript
if [ -f "$dir/bin/myscript" ]; then
    echo you have a myscript file in the bin directory
else
    echo there is no myscript file in your bin directory!
fi
exit
```

And this is the error:

CODE: SELECT ALL

```
/home/cis90/simben/bin $ ./script99
simben90
-rwxr-x--- 1 simben90 cis90 10489 Apr 30 07:33 /home/cis90/simben/bin/myscript
./script99: line 8: unexpected EOF while looking for matching `"'
./script99: line 16: syntax error: unexpected end of file
/home/cis90/simben/bin $
```

- Homer

*Best ...*

*This post shows both the script and the error using code tags which enables others to help you find and fix the problem.*

# Scripting Tips

## echo

# Silence is golden

*Many UNIX commands that run successfully produce no output*

```
[simben90@opus bin]$ alias details=file  
[simben90@opus bin]$ cp quiet quiet.bak  
[simben90@opus bin]$ value=002  
[simben90@opus bin]$ umask $value  
[simben90@opus bin]$ cat quiet > /dev/null  
[simben90@opus bin]$ > important_file
```

# Silence is golden

*Running or sourcing a script full of UNIX commands that produce no output .... still produces no output!*

```
[simben90@opus bin]$ cat quiet
alias details=file
cp quiet quiet.bak
value=002
umask $value
cat quiet > /dev/null
> important_file
```

```
[simben90@opus bin]$ quiet
[simben90@opus bin]$
```

```
[simben90@opus bin]$ source quiet
[simben90@opus bin]$
```

# Silence is golden

*You can use the echo command in your scripts to provide:*

- *interaction*
- *feedback*
- *tracing (for debugging)*

```
[simben90@opus bin]$ cat quiet
alias details=file
cp quiet quiet.bak
value=002
umask $value
cat quiet > /dev/null
> important_file
```

```
[simben90@opus bin]$ quiet
[simben90@opus bin]$
```

```
[simben90@opus bin]$ cat not-so-quiet
alias details=file
cp quiet quiet.bak
value=002
umask $value
echo TRACE: value=$value
cat quiet > /dev/null
echo "Quiet script successfully completed"
```

```
[simben90@opus bin]$ not-so-quiet
TRACE: value=002
Quiet script successfully completed
```

# Scripting Tips

`$(some-command)`

## Utilizing `$(some-command)`

The **\$** metacharacter provides the "value" of both variables, e.g. `$PS1` or commands, e.g. `$(some-command)`:

```
/home/cis90/simben $ echo $PS1  
$PWD $
```

```
/home/cis90/simben $ echo $(grep love poems/Shakespeare/* | wc -l)  
11
```

```
/home/cis90/simben $ myname=$(grep $LOGNAME /etc/passwd | cut -f5 -d":")  
/home/cis90/simben $ echo My name is $myname  
My name is Benji Simms
```

*This is useful when you want to insert the output of a command into a sentence being echoed*

# Scripting Tips

date

# Utilizing the date command

```
/home/cis90/simben $ date  
Wed Nov 26 15:35:53 PST 2008
```

```
/home/cis90/simben $ date +%r  
04:14:26 PM  
/home/cis90/simben $ time=$(date +%r)  
/home/cis90/simben $ echo "At the tone the time will be $time"  
At the tone the time will be 04:15:02 PM
```

```
/home/cis90/simben $ date +%A  
Tuesday  
/home/cis90/simben $ day=$(date +%A)  
/home/cis90/simben $ echo "Today is $day"  
Today is Tuesday
```

*See the man page on date for lots of other % codes*

## Class Activity

Your turn, make a script by adding the following two lines to a file named *mydate* using the vi editor:

```
echo "Hola $LOGNAME"  
echo Today is $(date +%m/%d/%Y')
```

Give the script execute permissions and run it:

```
/home/cis90/simben $ chmod +x mydate  
/home/cis90/simben $ mydate
```

*Copy and paste the output of your script into the chat window*

# tips on script names

# Don't name your scripts "script"

```
[simben90@opus bin]$ ls -l script  
-rwxr-x--- 1 simben90 cis90 47 Nov 23 16:44 script
```

```
[simben90@opus bin]$ cat script  
echo "Hello from the script file named script"
```

*What would happen if you ran the script above?*

# Don't name your scripts "script"

```
[simben90@opus bin]$ cat script  
echo "Hello from the script file named script"
```

```
[simben90@opus bin]$ script  
Script started, file is typescript
```

*Why the heck doesn't  
my script do what it's  
supposed to do?*

# Don't name your scripts "script"

```
[simben90@opus bin]$ cat script
echo "Hello from the script file named script"
```

```
[simben90@opus bin]$ script
Script started, file is typescript
```

*Why the heck doesn't my script do what it's supposed to do?*

```
[simben90@opus bin]$ Where is my script?
bash: Where: command not found
```

```
[simben90@opus bin]$ exit
Script done, file is typescript
```

```
[simben90@opus bin]$ cat typescript
Script started on Wed 13 May 2009 08:00:02 AM PDT
```

```
[simben90@opus bin]$ Where is my script?
bash: Where: command not found
```

```
[simben90@opus bin]$ exit
```

```
Script done on Wed 13 May 2009 08:00:47 AM PDT
```

```
[simben90@opus bin]$
```

# Don't name your scripts "script"

*Why doesn't script do what it is supposed to do? ... because script is the name of an existing UNIX command!*

```
[simben90@opus bin]$ man script
[simben90@opus bin]$
```

The screenshot shows a terminal window titled "roddyduk@opus:~/bin" displaying the manual page for the "script" command. The window title bar includes standard Linux window controls (minimize, maximize, close) and the window name. The terminal content is as follows:

```
SCRIPT (1) BSD General Commands Manual SCRIPT (1)
NAME
    script - make typescript of terminal session
SYNOPSIS
    script [-a] [-c COMMAND] [-f] [-q] [-t] [file]
DESCRIPTION
    Script makes a typescript of everything printed on your terminal. It is
    useful for students who need a hardcopy record of an interactive session
    as proof of an assignment, as the typescript file can be printed out
    later with lpr(1).

    If the argument file is given, script saves all dialogue in file. If no
    file name is given, the typescript is saved in the file typescript.

Options:
    -a      Append the output to file or typescript, retaining the prior con-
           tents.
    -c COMMAND
           Run the COMMAND rather than an interactive shell. This makes it
           easy for a script to capture the output of a program that behaves
           differently when its stdout is not a tty.
```

# Don't name your scripts "script"

*There are (at least) two files named script on Opus*

```
[simben90@opus bin]$ type script
script is hashed (/usr/bin/script)
[simben90@opus bin]$ file /usr/bin/script
/usr/bin/script: ELF 32-bit LSB executable, Intel 80386, version 1
(SYSV), for GNU/Linux 2.6.9, dynamically linked (uses shared libs),
for GNU/Linux 2.6.9, stripped
```

```
[simben90@opus bin]$ type /home/cis90/simben/bin/script
/home/cis90/simben/bin/script is /home/cis90/simben/bin/script
[simben90@opus bin]$ file /home/cis90/simben/bin/script
/home/cis90/simben/bin/script: ASCII text
[simben90@opus bin]$
```

**Question:** *Why did bash run the script in /usr/bin instead of the script in /home/cis90/simben/bin?*

# Don't name your scripts "script"

**Question:** Why did bash run the script in `/usr/bin` instead of the script in `/home/cis90/simben/bin`?

The Linux **script** command is in this directory

```
[simben90@opus bin]$ echo $PATH  
/usr/kerberos/bin:/usr/local/bin:/bin:/usr/bin:/home/cis90/bin:  
/home/cis90/simben/bin:.
```

Our script, named **script**, is in this directory

**Answer:** bash searches the path in the order the directories are listed. It finds the script command in `/usr/bin` first.

# Don't name your scripts "script"

*To override the PATH you can always specify an absolute pathname to the file you want to run:*

```
[simben90@opus bin]$ /home/cis90/simben/bin/script  
Hello from the script file named script
```

```
[simben90@opus bin]$ ./script  
Hello from the script file named script
```

*Note the shell treats the . above as "here" which in this case is /home/cis90/simben/bin*

## Try the script command

- Use the **script** command to start recording
- Type various commands of your choice
- Type **exit** or hit **Ctrl-D** to end recording
- Use **cat typescript** to see what you recorded

*This would be a good way to record a session such as working one of the lab assignments for future reference.*

# Review

```
function runningScript ()  
{
```

# The rules of the road for variables

- Rule 1: A child process can only see variables the parent has exported.
- Rule 2: A child process cannot change the parent's variables.

## Running a Script

```
/home/cis90/simben $ cat mydate  
#!/bin/bash  
echo "Hola $LOGNAME"  
date +%m/%d/%Y  
echo $myvar1 $myvar2 $myvar3
```

*Add this line to  
the last script we  
made*

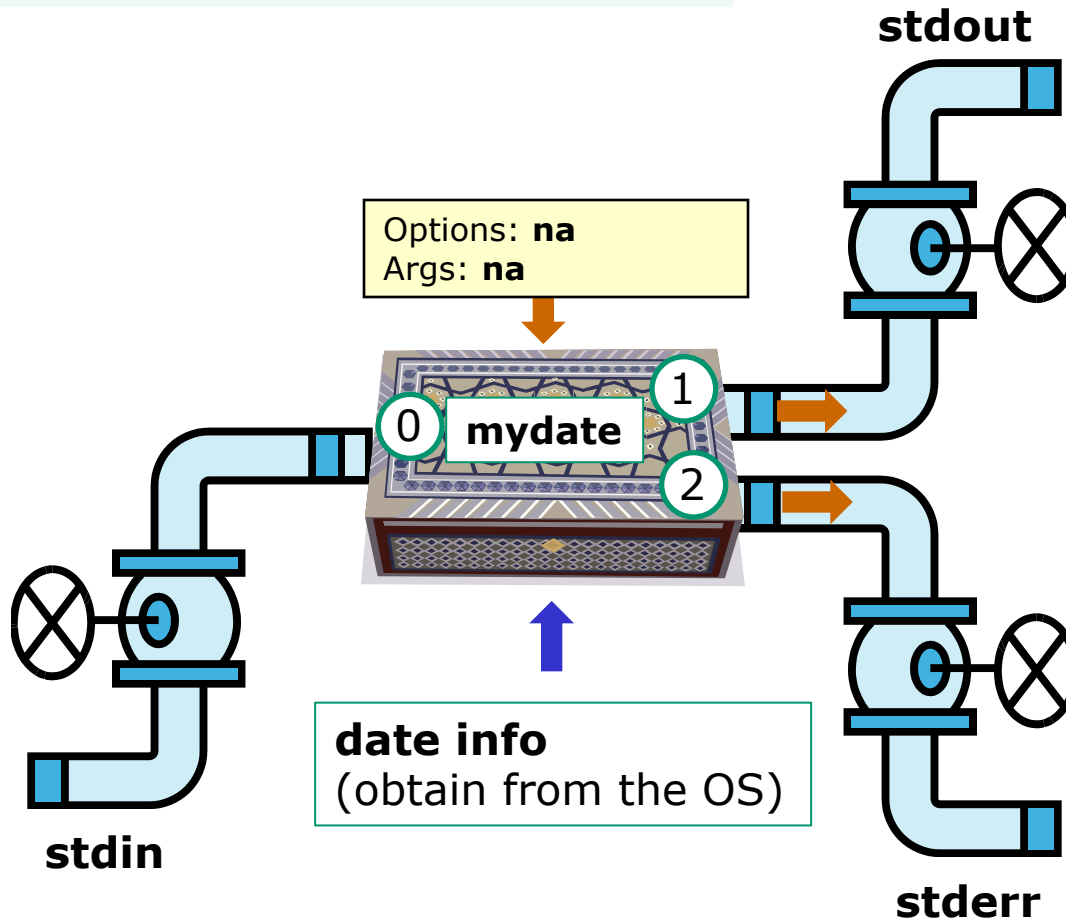

*Don't initialize  
them yet*

```
/home/cis90/simben $ mydate  
Hola simben90  
05/16/2013  
  
/home/cis90/simben $
```

*Because the variables  
don't exist yet the last  
echo statement prints a  
blank line*

# Running a Script

```
$ mydate
```

```
Hola simben90  
05/09/2013
```

*In this example, output from **myscript** goes to **stdout**.*

***stdout** has not been redirected so it goes to the default terminal device (your screen).*

# Running a Script

```
$ mydate
```

```
Hola simben90  
05/16/2012
```

*A sneak peek into memory to see what our process looks like!*

# Running a Script

Whenever you run any command, program, or script it runs as a **child process**

## Running a Script

```
/home/cis90/simben $ cat mydate  
#!/bin/bash  
echo "Hola $LOGNAME"  
date +%m/%d/%Y'  
echo $myvar1 $myvar2 $myvar3
```

*In the parent process, initialize the three variables*

```
/home/cis90/simben $ myvar1=Tic; myvar2=Tac; myvar3=Toe  
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3  
Tic Tac Toe
```

*What happens if we run **mydate** now?*

## Running a Script

```
/home/cis90/simben $ cat mydate
#!/bin/bash
echo "Hola $LOGNAME"
date +%m/%d/%Y'
echo $myvar1 $myvar2 $myvar3
```

```
/home/cis90/simben $ myvar1=Tic; myvar2=Tac; myvar3=Toe
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3
Tic Tac Toe
```

```
/home/cis90/simben $ mydate
Hola simben90
05/09/2012
```

*Running **mydate**  
(as a child process)*

```
/home/cis90/simben $
```

***Why no Tic Tac Toe output?***

## Running a Script

```
/home/cis90/simben $ export myvar1  
/home/cis90/simben $ mydate  
Hola simben90  
05/09/2012  
Tic
```

*Rule 1: A child process can only see variables the parent has exported*

```
/home/cis90/simben $ export myvar2  
/home/cis90/simben $ mydate  
Hola simben90  
05/09/2012  
Tic Tac
```

```
/home/cis90/simben $ export myvar3  
/home/cis90/simben $ mydate  
Hola simben90  
05/09/2012  
Tic Tac Toe
```

## Running a Script

```
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3  
Tic Tac Toe
```

```
/home/cis90/simben $ cat mydate
```

```
#!/bin/bash
```

```
echo "Hola $LOGNAME"
```

```
date +%m/%d/%Y'
```

```
echo $myvar1 $myvar2 $myvar3
```

```
myvar1=red myvar2=white myvar3=blue
```

```
echo $myvar1 $myvar2 $myvar3
```

*Add these  
new lines*

```
/home/cis90/simben $ mydate
```

```
Hola simben90
```

```
05/09/2012
```

```
Tic Tac Toe
```

```
red white blue
```

*Rule 2: A child process  
cannot change the  
parent's variables.*

```
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3
```

```
Tic Tac Toe
```

## Running a Script

*Unless we want them to*

```
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3  
Tic Tac Toe
```

```
/home/cis90/simben $ source mydate  
Hola simben90  
05/09/2012  
Tic Tac Toe  
red white blue
```

*Sourcing a script causes the instructions to be run in the parent process. A child process is not created*

```
/home/cis90/simben $ echo $myvar1 $myvar2 $myvar3  
red white blue
```

```
}  
while no-comprende  
do  
    runningScript  
done
```

# Printers

Sneak Peak for CIS 90 Students

Two predominate types of printers

- Thermal inkjet technology
- Laser, drum, toner technology

So many ways to hook them up ...

Now:

- Network
- USB
- Wireless (Bluetooth, IR)

Back then:

- Serial cable
- Parallel printer cable

# CUPS

# CUPS

This example will show how to add an HP PhotoSmart Premium C309n-s printer located on a different subnet than the Linux server.

Banana Pi running Raspbian  
GNU/Linux 7 (bp01)  
IP: 192.168.88.148

HP PhotoSmart Premium C309n-s (inky)  
IP: 192.168.1.100

*Run iceweasel (firefox) from the command line*

**iceweasel localhost:631 &**

- Iceweasel in Debian is a rebranded version of Firefox. This was necessary to avoid the conflict of the Mozilla proprietary trademark with the GNU GPL (General Public License).
- Localhost is the name for the local IP address of the server since in this case you are "browsing to yourself".
- 631 is the port CUPS listens to.
- & is used to run the Iceweasel browser in the background so we can continue to enter more commands in the terminal session if desired.

# CUPS

root's X desktop (bp01:1) - TightVNC Viewer

Or run iceweasel (firefox) from the menu from the start menu and browse to:

The screenshot shows a web browser window titled "Home - CUPS 1.5.3 - Iceweasel" with the address bar set to "localhost:631". The page content includes a navigation menu with "Home", "Administration", "Classes", "Online Help", "Jobs", and "Printers". The main heading is "CUPS 1.5.3" with a subtext: "CUPS is the standards-based, open source printing system developed by Apple Inc. for Mac OS® X and other UNIX®-like operating systems." To the right is the "UNIX PRINTING SYSTEM" logo. Below are three columns of links: "CUPS for Users" (Overview of CUPS, Command-Line Printing and Options, What's New in CUPS 1.5, User Forum), "CUPS for Administrators" (Adding Printers and Classes, Managing Operation Policies, Printer Accounting Basics, Server Security, Using Kerberos Authentication, Using Network Printers, cupsd.conf Reference, Find Printer Drivers), and "CUPS for Developers" (Introduction to CUPS Programming, CUPS API, Filter and Backend Programming, HTTP and IPP APIs, PPD API, Raster API, PPD Compiler Driver Information File Reference, Developer Forum). The browser's taskbar at the bottom shows the time as 18:01.

# Printing in Linux

# Printing Commands

## The ATT System V way

- lp (to print)
- lpstat (queue management)
- cancel (to remove jobs)

## The BSD (Berkeley Software Distribution) way

- lpr (to print)
- lpq (queue management)
- lprm (to remove jobs)

*BSD is a branch of UNIX that was developed at the University of California, Berkeley*

## And now CUPS ...

- Provides both System V and Berkeley based command-line interfaces
- Supports new Internet Printing Protocol
- Works with Samba

# CUPS

## lpstat command

Syntax: **lpstat** [*options*]

```
rsimms@hugo:~$ lpstat -p  
printer HP_LaserJet_1320_series is idle.  enabled since Tue 08 May  
2012 08:46:45 PM PDT
```

*The -p option will show the  
available printers*

```
rsimms@hugo:~$ lpstat -p -d  
printer HP_LaserJet_1320_series is idle.  enabled since Tue 08 May  
2012 08:46:45 PM PDT  
system default destination: HP_LaserJet_1320_series
```

*The -d option will identify  
the default printer*

# CUPS

## lpstat command

*On Opus*

What printers are available on Opus?

Which is the default printer?

*Write your answers in the chat window*

# CUPS

## lp and lpr commands

*Use **lp** (or **lpr**) to print files*

```
/home/cis90/simben $ lp lab10  
request id is hplaser-5 (1 file(s))
```

```
/home/cis90/simben $ lp -d hplaser lab10  
request id is hplaser-6 (1 file(s))
```

*With **lp**, use the **-d** option to manually select the printer*

```
/home/cis90/simben $ lpr lab10
```

```
/home/cis90/simben $ lpr -P hplaser lab10
```

*With **lpr**, use the **-P** option to manually select a printer*

# CUPS

## lp and lpr commands

```
/home/cis90/simben $ echo "Print Me Quietly" | lpr -P hplaser  
/home/cis90/simben $
```

*Note that both lp and lpr will read from stdin.*

*This allows output from another command to be piped in*

# CUPS

## Practice Printing

*On Opus, print your lab10 and letter files*

```
lp lab10  
lpstat
```

```
lpr letter  
lpstat
```

```
echo "Print Me Quietly" | lpr -P hplaser  
lpstat
```

# Managing Print Jobs

# CUPS

## Showing jobs waiting to print

```
[root@benji ~]# lpq
hp7550 is not ready
Rank      Owner    Job      File(s)
Total Size
1st       root     22       myfile
1024 bytes
2nd       root     23       myfile
1024 bytes
3rd       root     24       myfile
1024 bytes
4th       root     25       myfile
1024 bytes
```

*Use **lpq** or **lpstat** with no options to show spooled print jobs*

```
[root@benji ~]# lpstat
hp7550-22                root                1024    Sat
15 Nov 2008 12:20:23 PM PST
hp7550-23                root                1024    Sat
15 Nov 2008 12:20:28 PM PST
hp7550-24                root                1024    Sat
15 Nov 2008 12:20:31 PM PST
hp7550-25                root                1024    Sat
15 Nov 2008 12:20:34 PM PST
```

# CUPS

## Removing/canceling pending print jobs

```
[root@benji ~]# lpq
hp7550 is not ready
Rank   Owner   Job    File(s)
Total Size
1st    root    22     myfile
1024 bytes
2nd    root    23     myfile
1024 bytes
3rd    root    24     myfile
1024 bytes
4th    root    25     myfile
1024 bytes
```

```
[root@benji ~]# cancel 22
[root@benji ~]# cancel 23
[root@benji ~]# lprm 24
[root@benji ~]# lprm 25
```

*Use **cancel** or **lprm**  
to remove print jobs*

```
[root@benji ~]# lpq
hp7550 is not ready
no entries
```

```
[root@benji ~]# lpstat
[root@benji ~]#
```

# CUPS

## Practice Printing

### *On Opus*

```
lpq  
lpstat
```

```
cancel <print job number>  
lpq
```

```
lprm <print job number>  
lpq
```

# Wrap up

Commands:

|              |                       |
|--------------|-----------------------|
| lp, lpr      | - Linux print command |
| cancel, lprm | - cancel print job    |
| lpq, lpstat  | - Show print queue    |

Web:

|                                                         |                                     |
|---------------------------------------------------------|-------------------------------------|
| <a href="http://hostname:631">http://hostname:631</a>   | - CUPS web based management utility |
| <a href="http://hostname:9100">http://hostname:9100</a> | - HP JetDirect printer              |

## Next Class

Assignment: Check Calendar Page on web site to see what is due next week.

*No Quiz  
No Lab due*

**Work on final project - due in two weeks!**

Optional extra credit labs

## Project Workshop

- See if you can get one “starter” task scripted and working before leaving class today.
- Grade your starter script using the Final Project rubric

Implementing all five tasks (6 points each):

- Requirements for each task:
  - Minimum of 10 “original” script command lines
  - Has one or more non-generic comments to explain what it is doing
  - Has user interaction

You don't have to do all of these but do at least five:

- Redirecting stdin (5 points)
- Redirecting stdout (5 points)
- Redirecting stderr (5 points)
- Use of permissions (5 points)
- Use of filename expansion characters (5 points)
- Use of absolute path (5 points)
- Use of relative path (5 points)
- Use of a PID (5 points)
- Use of inodes (5 points)
- Use of links (5 points)
- Use of scheduling (5 points)
- Use of a GID or group (5 points)
- Use of a UID or user (5 points)
- Use of a /dev/tty device (5 points)
- Use of a signal (5 points)
- Use of piping (5 points)
- Use of an environment variable (5 points)
- Use of /bin/mail (5 points)
- Use of a conditional (5 points)

The maximum for this section is 25 points.
