

Rich's lesson module checklist

Last Modified 9/10/2016

- Slides and lab posted
- WB converted from PowerPoint
- Print out agenda slide and annotate page numbers

- Flash cards
- Properties
- Page numbers
- 1st minute quiz
- Web Calendar summary
- Web book pages
- Commands

- Lab 2 tested (check Q11 kernel release number and finger user account)
- Opus – set submit deadline
 - at 12:00 am lateday
 - chmod 700 /home/cis90/bin/submit
 - chmod 700 /home/turnin/cis90
 - at 9:00 am lateday
 - chmod 750 /home/cis90/bin/submit
 - chmod 755 /home/turnin/cis90

- Bring Add Codes
- Bring printed roster

- Backup slides, whiteboard slides, handouts on flash drive
- 9V backup battery for microphone
- Key card for door

Student Learner Outcomes

1. Navigate and manage the UNIX/Linux file system by viewing, copying, moving, renaming, creating, and removing files and directories.
2. Use the UNIX features of file redirection and pipelines to control the flow of data to and from various commands.
3. With the aid of online manual pages, execute UNIX system commands from either a keyboard or a shell script using correct command syntax.

Introductions and Credits

Jim Griffin

- Created this Linux course
- Created Opus and the CIS VLab
- Jim's site: <http://cabrillo.edu/~jgriffin/>

Rich Simms

- HP Alumnus
- Started teaching this course in 2008 when Jim went on sabbatical
- Rich's site: <http://simms-teach.com>

And thanks to:

- John Govsky for many teaching best practices: e.g. the First Minute quizzes, the online forum, and the point grading system (<http://teacherjohn.com/>)

Student checklist for attending class

The screenshot shows a web browser window with the address bar containing `simms-teach.com/cis90calendar.php`. The page title is "Rich's Cabrillo College CIS Classes CIS 90 Calendar". On the left sidebar, there is a "CIS 90" link. The main content area shows a "CIS 90 (Fall 2014) Calendar" with tabs for "Course Dates", "Lectures", and "Calendar". The "Calendar" tab is selected, showing a table with columns for "Lesson", "Date", and "Topics". The first lesson is "User and File Concepts" with a "Presentation slides (download)" link. Below the table, there are sections for "Materials", "Supplemental", "Assignment", "Lab Exercise", and "Quiz 1". An "Enter virtual classroom" link is also visible at the bottom of the page.

1. Browse to:
<http://simms-teach.com>
2. Click the **CIS 90** link.
3. Click the **Calendar** link.
4. Locate today's lesson.
5. Find the **Presentation slides** for the lesson and **download** for easier viewing.
6. Click the **Enter virtual classroom** link to join CCC Confer.
7. Log into Opus with Putty or ssh command.

Note: Blackboard Collaborate Launcher only needs to be installed once. It has already been downloaded and installed on the classroom PC's.

Student checklist for suggested screen layout

Google

CCC Confer

Downloaded PDF of Lesson Slides

CIS 90 website Calendar page

One or more login sessions to Opus

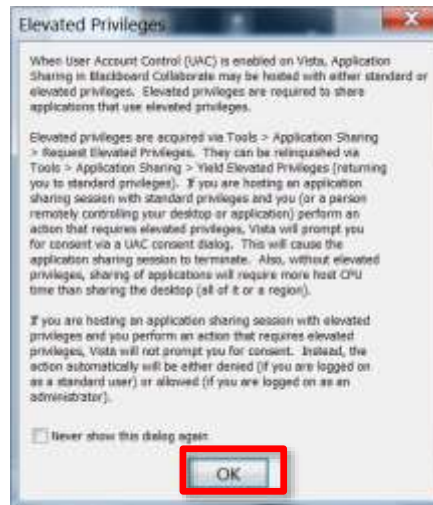

Student checklist for sharing desktop with classmates

1) Instructor gives you sharing privileges

2) Click overlapping rectangles icon. If white "Start Sharing" text is present then click it as well.

3) Click OK button.

4) Select "Share desktop" and click Share button.

Rich's CCC Confer checklist - setup

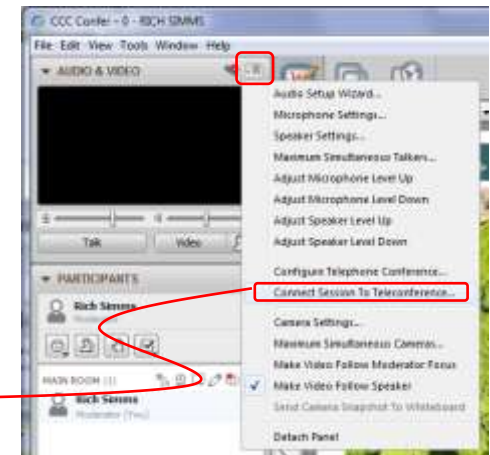

[] Preload White Board

[] Connect session to Teleconference

Session now connected to teleconference

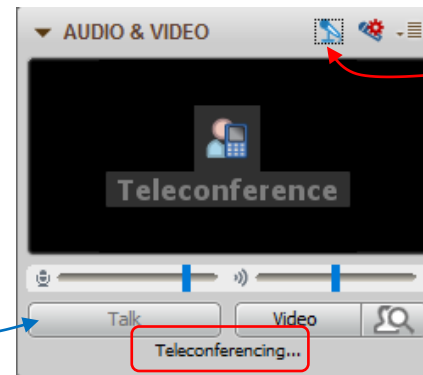

[] Is recording on?

Red dot means recording

[] Use teleconferencing, not mic

Should be grayed out

Should change from phone handset icon to little Microphone icon and the Teleconferencing ... message displayed

Rich's CCC Confer checklist - screen layout

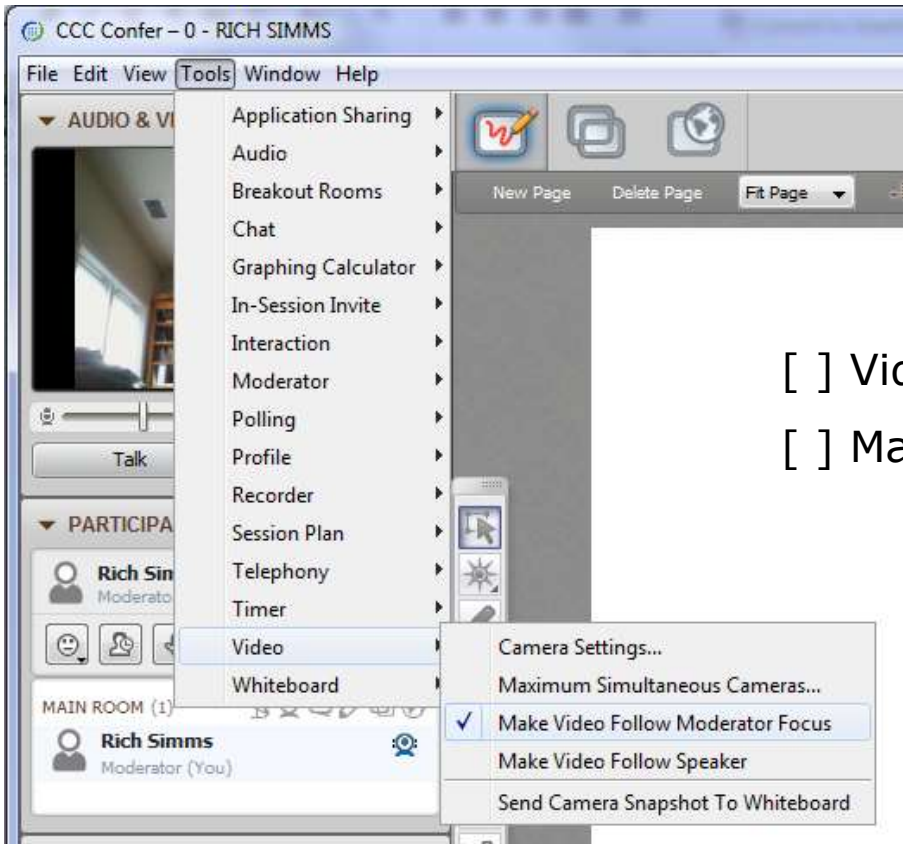

[] layout and share apps

Rich's CCC Confer checklist - webcam setup

[] Video (webcam)

[] Make Video Follow Moderator Focus

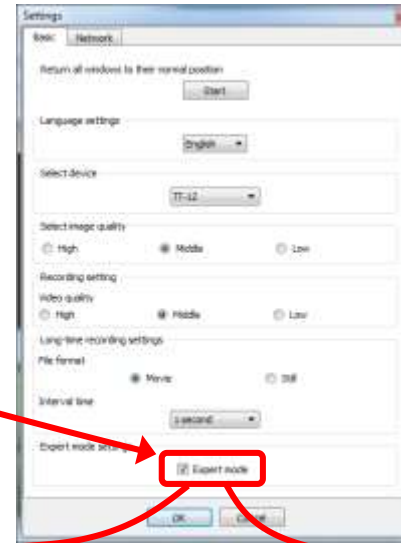

Rich's CCC Confer checklist - Elmo

Elmo rotated down to view side table

Run and share the Image Mate program just as you would any other app with CCC Confer

The "rotate image" button is necessary if you use both the side table and the white board.

Quite interesting that they consider you to be an "expert" in order to use this button!

Elmo rotated up to view white board

Rich's CCC Confer checklist - universal fixes

Universal Fix for CCC Confer:

- 1) Shrink (500 MB) and delete Java cache
- 2) Uninstall and reinstall latest Java runtime
- 3) <http://www.cccconfer.org/support/technicalSupport.aspx>

Control Panel (small icons)

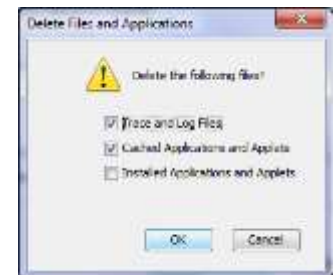

General Tab > Settings...

500MB cache size

Delete these

Google Java download

Start

Sound Check

*Students that dial-in should mute their line using *6 to prevent unintended noises distracting the web conference.*

*Instructor can use *96 to mute all student lines.*

Instructor: **Rich Simms**

Dial-in: **888-886-3951**

Passcode: **136690**

First Minute Quiz

Please answer these questions **in the order** shown:

Use CCC Confer White Board

email answers to: risimms@cabrillo.edu

(answers must be emailed within the first few minutes of class for credit)

Commands

Objectives

- Understand where account information is kept.
- Understand why strong passwords are important.
- Learn where commands are located.
- Understand how the shell works to run commands.
- Discover where to find documentation.

Agenda

- Quiz
- Questions
- Using VLab
- Virtual terminals
- Logging in
- Passwords
- Housekeeping
- Lesson 2 commands
- The path
- Location of common commands
- Programs
- Inputs to commands
- Command syntax
- Parsing
- Variables
- The shell (six steps)
- Metacharacters
- Shortcuts
- Life without a path
- Docs
- Wrap up

Class Activity

```
( 'v' )  
//--\\  
( \_ = \_ / )  
  ~ ~   ~ ~
```

```
Welcome to Opus  
Serving Cabrillo College
```

If you haven't already,
log into Opus

Questions

Questions

How this course works?

Past lesson material?

Previous labs?

Chinese
Proverb

他問一個問題，五分鐘是個傻子，他不問一個問題仍然是一個傻瓜永遠。

He who asks a question is a fool for five minutes; he who does not ask a question remains a fool forever.

Extra Credit

<http://simms-teach.com/cis90grades.php>

For some flexibility, personal preferences or family emergencies there is an additional 90 points available of **extra credit** activities.

On the forum

Be sure to monitor the forum as I may post extra credit opportunities without any other notice!

On Lab 1 submittal

```

simben@simben:~$
-----
Lab 1 Scavenger Hunt
Update the table below with your collected items the
-----
SYSTEM      ITEM      COLLECTED
defiant     star      <no entry>
lexington   instrument <no entry>
enterprise  movie     <no entry>
intrepid    fruit     <no entry>
freedom     book      <no entry>
excalibur   dog       Redbone Coonhound

BONUS QUESTION ANSWERS
Q1)
Q2)
Q3)

SELECTION MENU
1) Set star
2) Set instrument
3) Set movie
4) Set fruit
5) Set book
6) Set dog
7) Answer bonus questions
8) Submit your work for grading and quit
9) Quit without submitting

Enter selection (1-9):

```

In lesson slides

<http://simms-teach.com/cis90extracredit.php>

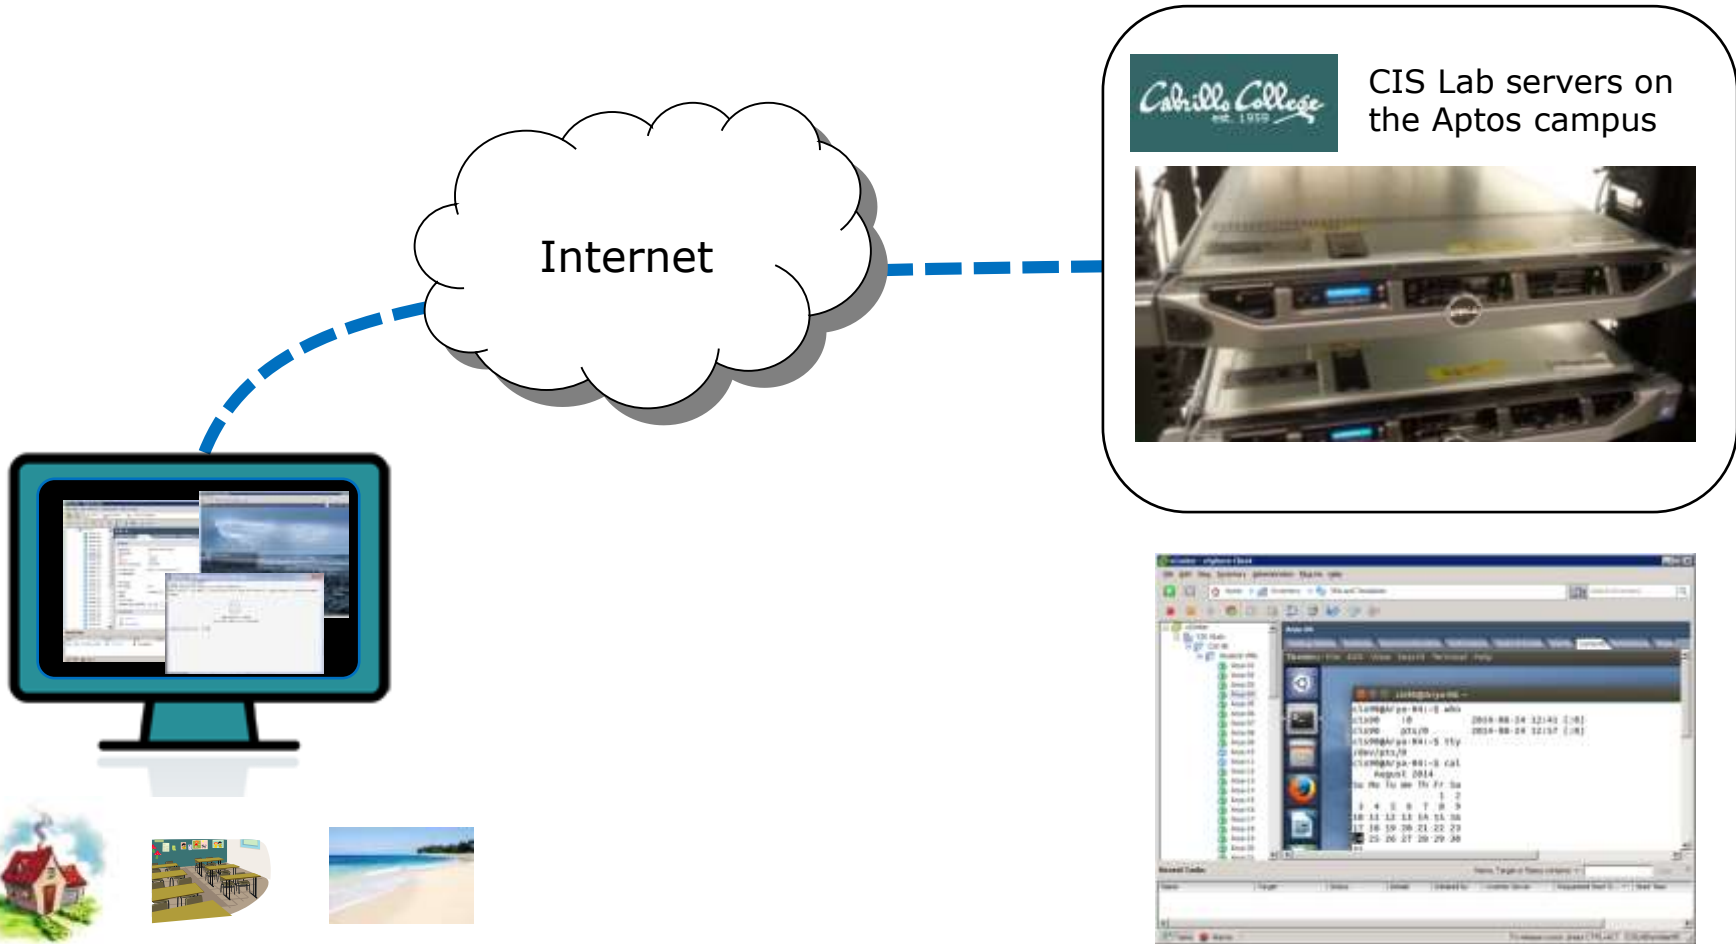

- **Web site content review** - The first person to email the instructor pointing out an error or typo on this website will get one point of extra credit for each unique error. The email must specify the specific document or web page, pinpoint the location of the error, and specify what the correction should be. Duplicate errors count as a single point. This does not apply to pre-published material than has been uploaded but not yet presented in class. (Up to 20 points total)

Using CIS VLab (Virtual Lab)

Third driving lesson

Accessing CIS VLab VMs

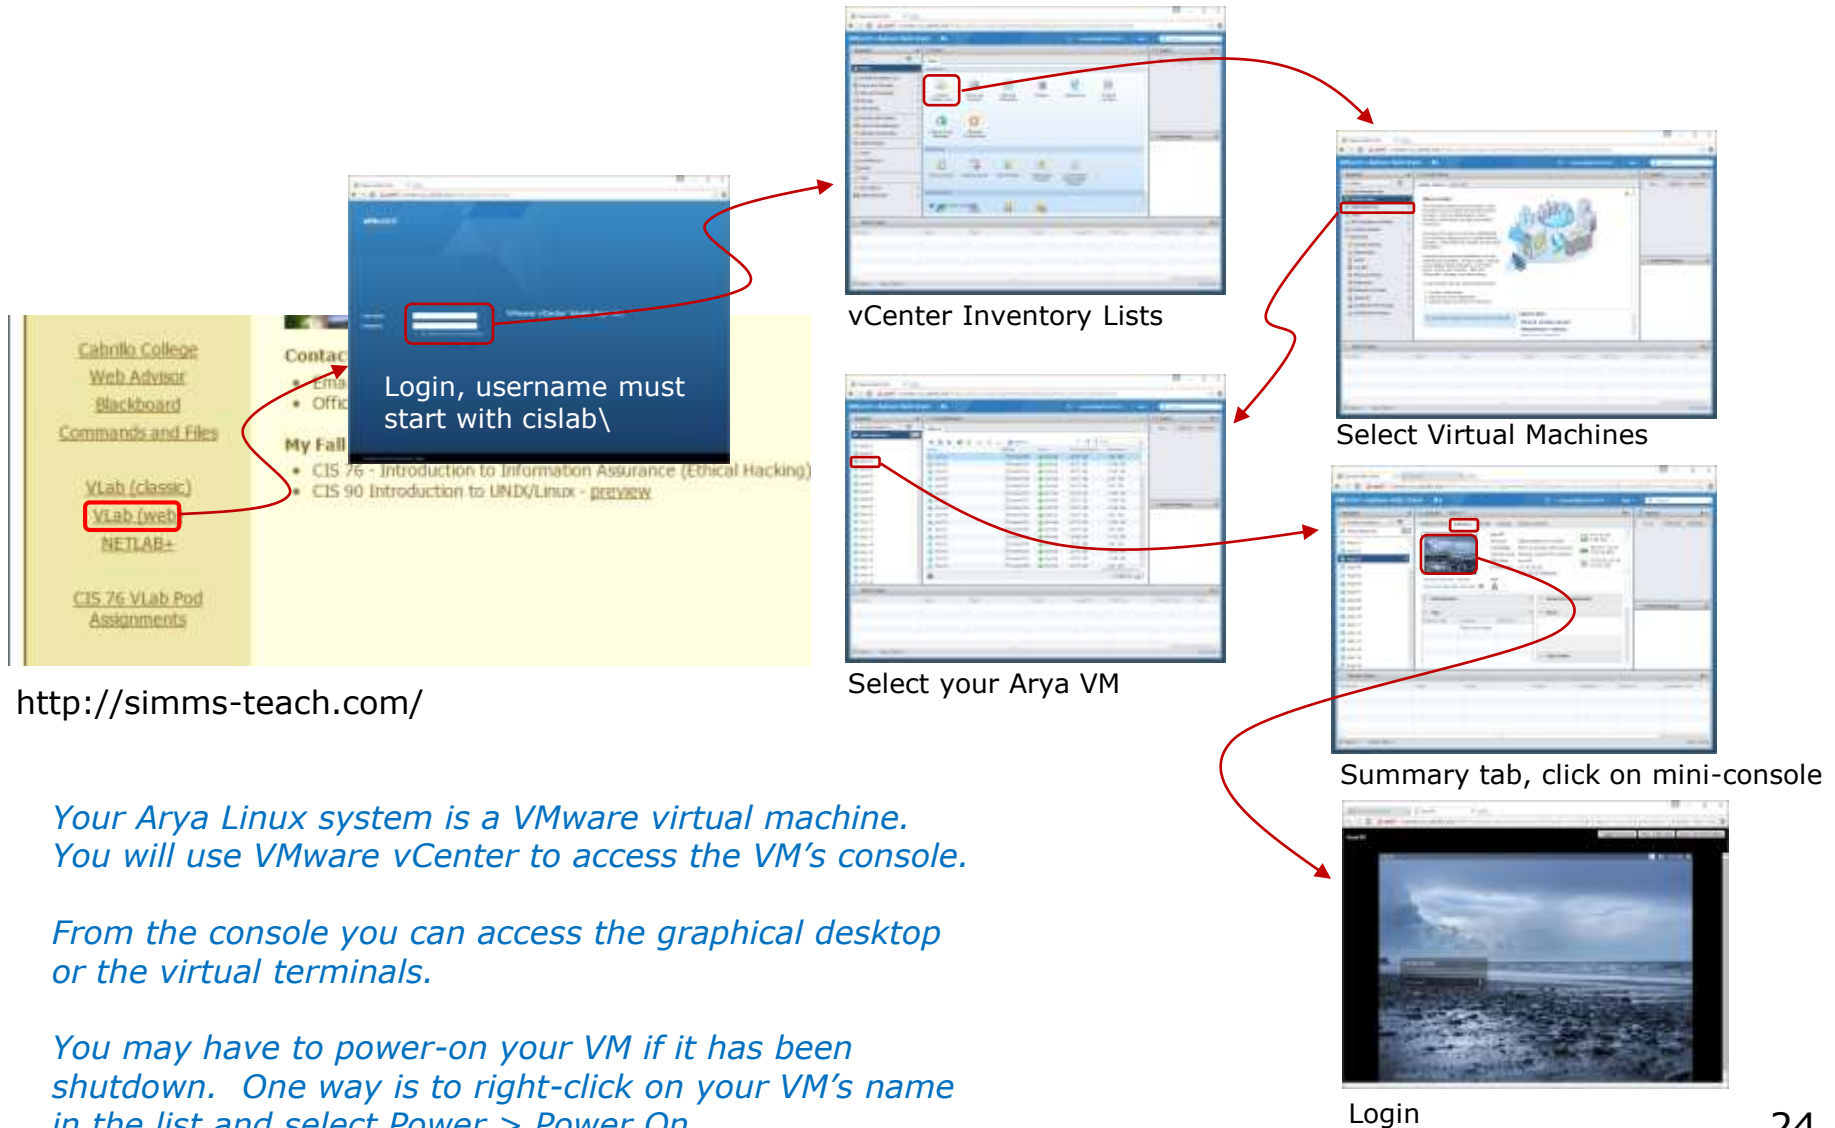

Home

School

Travel

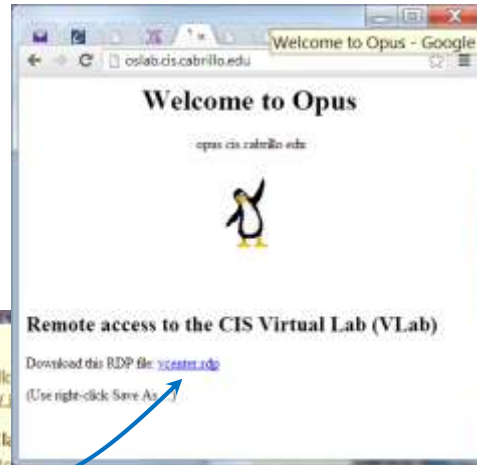

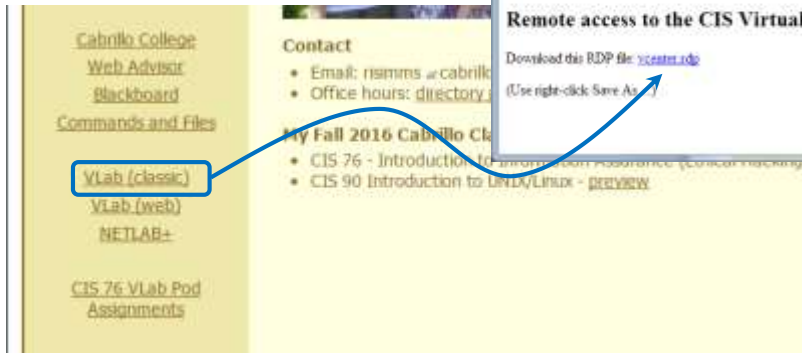

Accessing CIS VLab via vSphere Web Client

Accessing CIS VLab via vSphere Client

<http://simms-teach.com/>

Open

Login

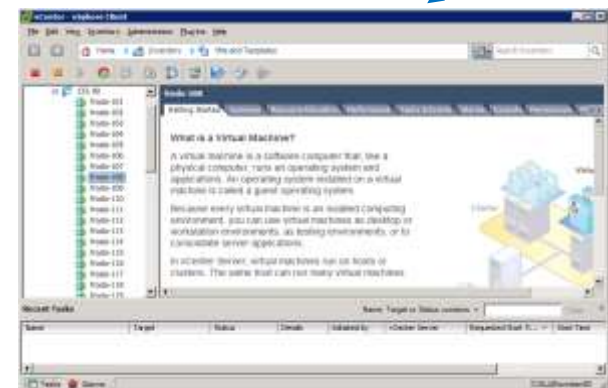

Connect

Ignore

Wait ...

- 1) Download the vcenter.rdp file to your desktop and then open it to access VLab.
- 2) Mac users need to install an RDP app like Microsoft Remote Desktop.
- 3) When entering your username and password you must preface your username with the "cislab\", for example Benji would use: cislab\simben90

Locate and select your assigned VM

Class Activity

Follow the instructor to open a console on your VM

- Browse to <http://simms-teach.com>
- Determine which Arya VM is yours
- Connect to Vlab's vCenter
- Navigate to CIS 90 Arya VMs
- Select your VM and open the console

Log in as
CIS 90 Student

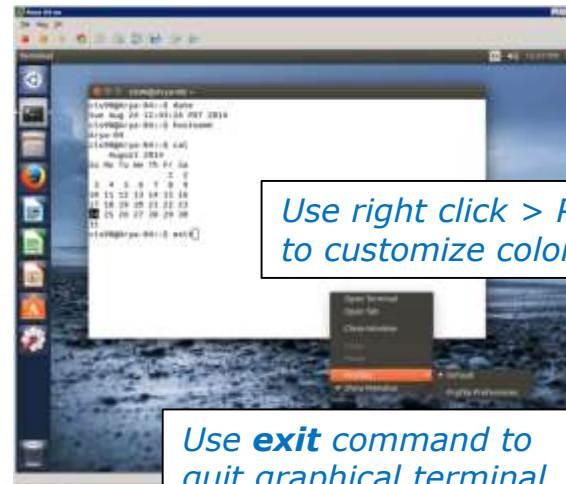

The Arya VM

Shutdown using
 **> Shut Down...**

To get a graphical terminal
Terminal icon (under System Settings)

Use **exit** command to
quit graphical terminal

Class Activity

Follow the instructor to login and use your VM

- Login to your Arya VM*
- Open a graphical terminal
- Use who command to see logins
- Find the "toothed gear" icon to logoff, restart or shutdown

*See the CIS 90 welcome email or announcement in Canvas from the instructor for Arya login credentials

Command Line vs Graphical Desktop

Access the UNIX/Linux systems using:

ssh when:

- You just need a command line
- Have a low or high speed network connection
- Note: Windows users can use Putty

VLab when:

- You want a graphical desktop
- You want to use virtual terminals (the very basic black consoles)
- Note: High speed network connection is needed
- Note: Mac users can use CoRD
- Note: you may need a fix applied to your VM if you experience the dreaded "unintended repeating key" issue

VLab = using the VMware vSphere Client via a Remote Desktop (RDP) connection

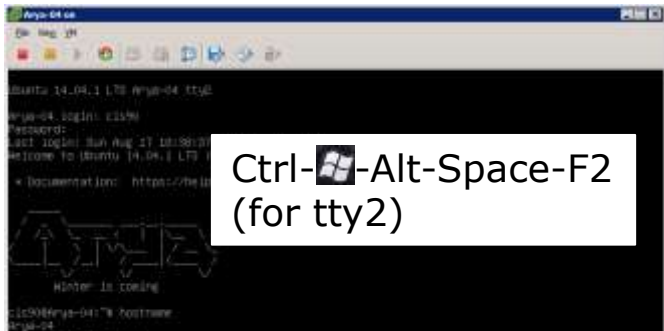

Virtual Terminals (consoles)

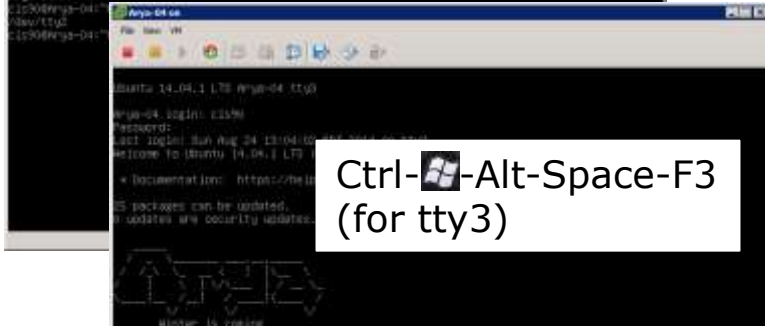

Fourth driving lesson

Virtual Terminals

- 1) While holding down Ctrl--Alt keys, tap Space, then tap Fn key
- 2) or try: **chvt n**
- 3) or try: **sudo chvt n**
- 4) or try: **<alt-key> n**
(in an Ubuntu virtual terminal)

Ctrl--Alt-Space-F2
(for tty2)

Ctrl--Alt-Space-F3
(for tty3)

Ctrl--Alt-Space-F4
(for tty4)

Ctrl--Alt-Space-F7
(for pts/0)

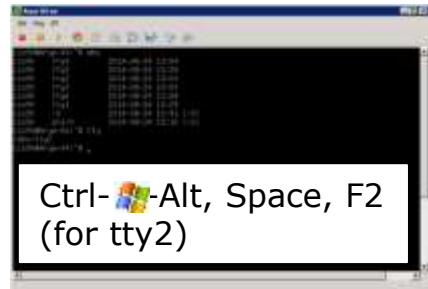

Changing Virtual TTY Terminals using VMware vSphere

Windows PC Keyboard

While holding down Ctrl-Alt keys, tap Space, then tap Fn key*

*On some PC keyboards it is not necessary to use the key

Note: This is for vSphere only. The key and Space bar are not pressed for physical (non-VM) servers

Changing Virtual Terminals on VMware Linux VMs

VMware operations	
On PC Keyboard:	While holding down the Ctrl-  -Alt keys, tap spacebar then tap f1, f2, ... or f7.
On Mac keyboard:	Hold down Control and Option keys, tap the spacebar, hold down fn key (in addition to Control and Option keys) and tap f1, f2, ... or f7.

Pressing the  on some Windows keyboards may not be necessary

F7 is graphics mode for the Ubuntu VMs.

The Centos VMs do not have a graphics mode components installed (run level 3 only)

Note: the spacebar does not need to be tapped on a physical (non-VM) system. This is only required when changing virtual terminals on VMware VMs.

VMware VM Operations

Changing Virtual Terminals with a PC keyboard

On PC keyboard:

While holding down the **Ctrl--Alt** keys,
tap **Spacebar** then tap **F n** key

(where $n=1-7$ to specify a function key)

VMware VM Operations

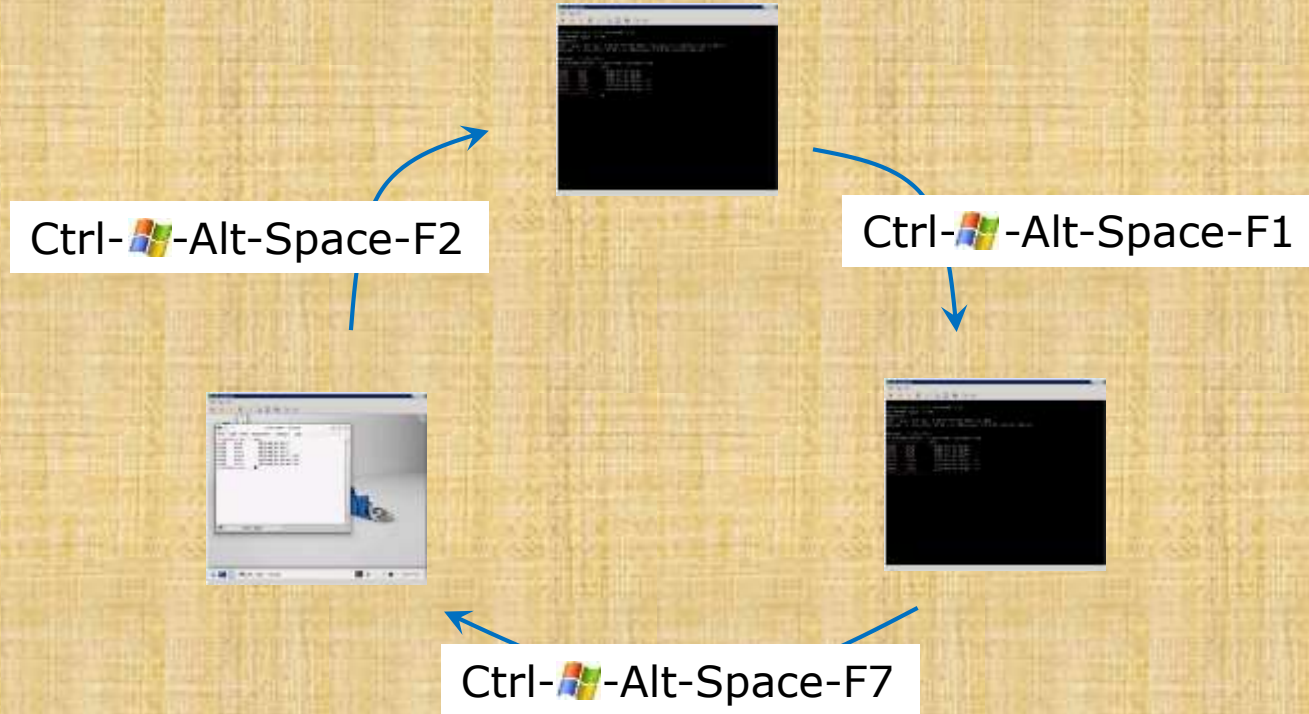

Changing Virtual Terminals with a Mac keyboard

On Mac keyboard:

While holding down the **control-option** keys
tap **Spacebar** then tap **fn-F n** keys
(where $n=1-7$ to specify a function key)

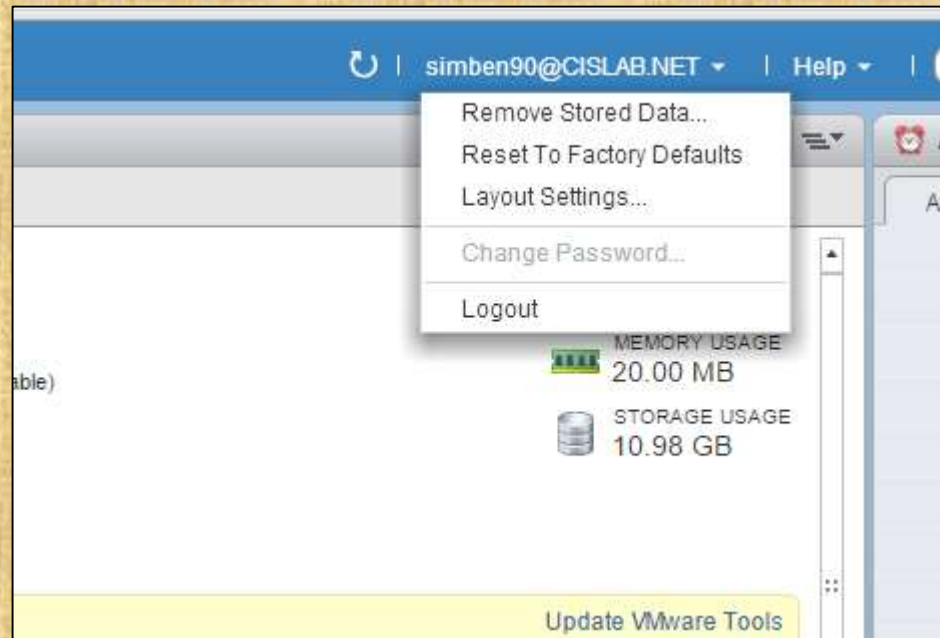

Class Activity

Follow the instructor to:

- Try changing between the graphical desktop and the TTYs
- Login as cis90 on tty1 and tty2
- Run a terminal on the graphical desktop
- Use the who command to see how many logins there are

Class Activity

Logout of Vlab's vCenter

Your VM will keep running even though you disconnect from vCenter

Logging In (authentication)

Who goes there?

What's the password?

<http://www.gutenberg.org/files/15064/15064-h/images/269.png>

Logging in

- A system administrator can create user accounts for each user that is allowed to login
- To login you must be authenticated as one of those users
- There are two common authentication methods used:
 - 1) Username and password
 - 2) Public & private keys

We will cover just usernames and passwords today

Logging in

Logging in using Putty from Windows PCs

Basic options for your PuTTY session

Specify the destination you want to connect to

Host Name (or IP address) Port

Connection type:

Raw Telnet Rlogin SSH Serial

If you don't specify your username the system will prompt you for both your username and password

```
login as: simben90
simben90@oslab.cis.cabrillo.edu's password:
```

Basic options for your PuTTY session

Specify the destination you want to connect to

Host Name (or IP address) Port

Connection type:

Raw Telnet Rlogin SSH Serial

If you specify your username the system will just prompt you for your password

```
Using username "simben90".
simben90@oslab.cis.cabrillo.edu's password:
```

Logging in with the ssh command from Mac or UNIX/Linux systems

```
ssh -p 2220 simben90@oslab.cis.cabrillo.edu
```

If you don't specify a username the ssh command will use your current username. Be careful, that username may not exist on the remote system you are trying to login to.

```
[rsimms@daughter-of-opus ~]$ ssh -p 2220 simben90@oslab.cis.cabrillo.edu
simben90@oslab.cis.cabrillo.edu's password:
```

Logging in

Logging in on a virtual terminal

```
CentOS release 6.5 (Final)
Kernel 2.6.32-504.16.2.el6.i686 on tty1

oslab login: simben90
Password:
Last login: Tue Sep  8 16:02:07 from 2607:f380:80f:f830:250:56ff:febd:3193

      _
     ( ' v ' )
    \  ---  /
   ( \  =  / )
    ~~~ ~~~

      Welcome to Opus
      Serving Cabrillo College

Terminal type? [linux]
Terminal type is linux.
/home/cis90/simben $ _
```

When you have direct physical access to a system you can use one of these virtual terminals on the system console. You are not using ssh over the network in this situation.

Logging in

Logging in using a graphical desktop (Ubuntu)

This can be done locally or over the network

Just for kicks

:0

tty1

pts/21

```

cis90@Arya-66:~$ who
cis90    tty1          2015-09-08 16:43
cis90    :0              2015-09-08 16:53 (:0)
cis90    pts/21         2015-09-08 16:39 (opus.cis.cabrillo.edu)
cis90    pts/0           2015-09-08 16:55 (opus.cis.cabrillo.edu)
cis90    pts/8           2015-09-08 16:53 (:0)
    
```

pts/0

pts/8

Let's login to an Arya using a virtual terminal, a graphical desktop, two ssh sessions and a graphical terminal on the graphical desktop

Logging in

- For systems that are not connected to a directory service (e.g. Microsoft Active Directory) all user accounts are kept in a file named **/etc/passwd**
- For systems that are not connected to a directory service all passwords are kept encrypted in a file named **/etc/shadow**

The `/etc/passwd` file

The SUPER user is named root

```
[rsimms@daughter-of-opus ~]$ cat /etc/passwd  
root:x:0:0:root:/root:/bin/bash
```

Snipped

```
deanna:x:2009:1701:Deanna Troi:/home/deanna:/bin/bash  
chakotay:x:2010:1701:Chakotay:/home/chakotay:/bin/bash  
kira:x:2011:1701:Kira Nerys:/home/kira:/bin/bash  
chekov:x:2012:1701:Pavel Chekov:/home/chekov:/bin/bash  
[rsimms@daughter-of-opus ~]$
```

To login your username must match one of the accounts in the `/etc/passwd` file

Note: this file no longer contains the passwords!

Viewing your account in /etc/passwd

This command, which we will learn how to do later, outputs just one line of the /etc/passwd file on Opus

```
/home/cis90/simben $ grep simben90 /etc/passwd
```

```
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

1) username

2) password (just a placeholder now)

3) User ID (UID)

4) Group ID (GID)

5) Comment

6) Home directory

7) Shell

Note the fields in /etc/passwd are delimited with a ":"

```
/home/cis90/simben $ id
```

```
uid=1201(simben90) gid=190(cis90) groups=190(cis90),100(users)  
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023
```

*Now you know where the **id** command get some of its information!*

The /etc/shadow file

The SUPER user is named root

```
[rsimms@daughter-of-opus ~]$ cat /etc/shadow
```

```
cat: /etc/shadow: Permission denied
```

```
[rsimms@daughter-of-opus ~]$ sudo cat /etc/shadow
```

Use sudo to run command as superuser (root)

```
[sudo] password for rsimms:
```

```
root:$6$  
:16226:0:99999:7:::
```

Snipped

```
deanna:$6$hsAXq0Jk$ndIt.oxiFL/qZ7pLAFOaGgxpxAHDEj7ukpd0PfeRN0J9q07Z6Cg0V  
3hzo9eSAk0GlaywDtqwL5NefNEEwf9FR1:16686:0:99999:7:::
```

```
chakotay:$6$c/kFViIa$nTUJcvJRCut8PwvOSYLlopAI25UsFLNKerGF8OhQIkI78RHTXE1  
KOOwvDRSW6BAi4pui7LLpi6JP8QCBMVU1s1:16686:0:99999:7:::
```

```
kira:$6$3dqjzQCw$G2bJapsW07IhLD.cQfI9htk.hWiGUdJhOjNDxZT4zTN9lWTP0KDJ6eg  
hBzvT86xUXhIM8XDFB4WpOt.5Ab0jJ.:16686:0:99999:7:::
```

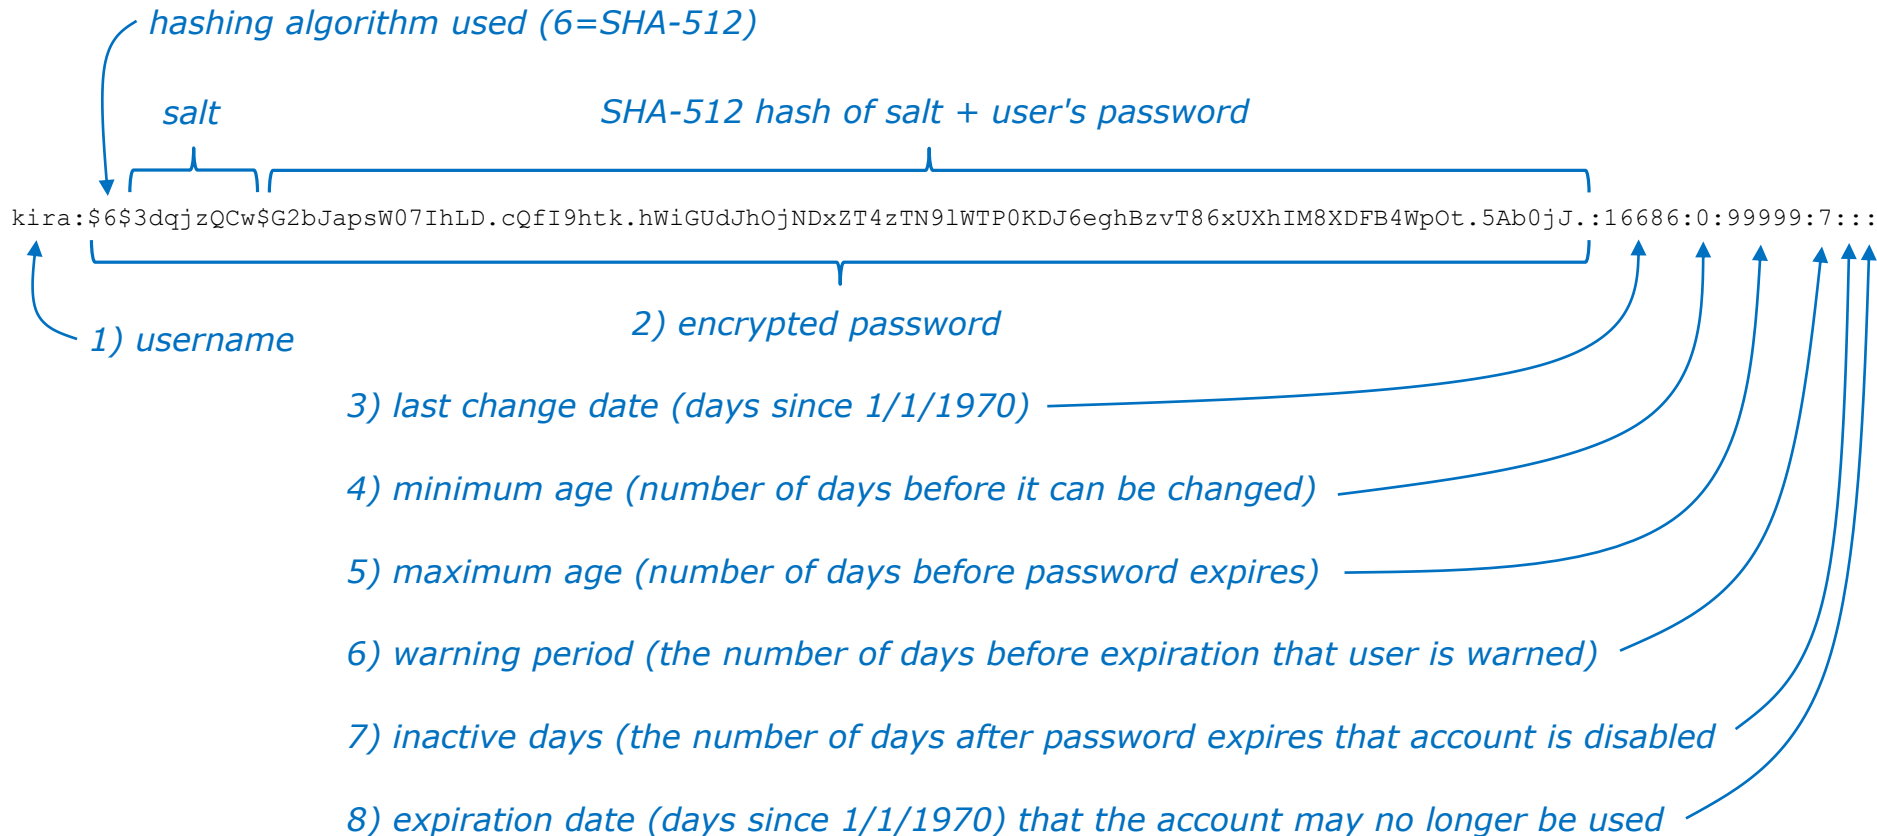

```
chekov:$6$jd4PMdv0$HPyW/k04DjMDeL03qUfEzvQj0fWpLuUWMh9RvlOv1V3N/zQxhdhS3  
YfSLdhHz0rKBelwzGGx07CrzOfL3MKNa1:16686:0:99999:7:::
```

```
[rsimms@daughter-of-opus ~]$
```

To login, your password must match the encrypted account password kept in the `/etc/shadow` file

Only the root user can view this file and the passwords are encrypted!

The /etc/shadow file

Note the major fields in /etc/shadow are delimited with a ":". The encrypted password field is further delimited with a "\$"

Class Activity

```
/home/cis90/simben $ grep simben90 /etc/passwd
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

username →
password (just a placeholder now) →
User ID (UID) →
Group ID (GID) →
Comment →
Home directory →
Shell →

Note the field separator used in /etc/passwd is a ":"

1) Find your record in /etc/passwd

- Paste your UID (User ID) number in the chat window
- Paste your home directory in the chat window
- Paste your shell in the chat window

2) cat /etc/shadow

Give me a green check ✓ if you can view this file otherwise give me a red ✗

For Supplemental Study

<http://www.slashroot.in/how-are-passwords-stored-linux-understanding-hashing-shadow-utils>

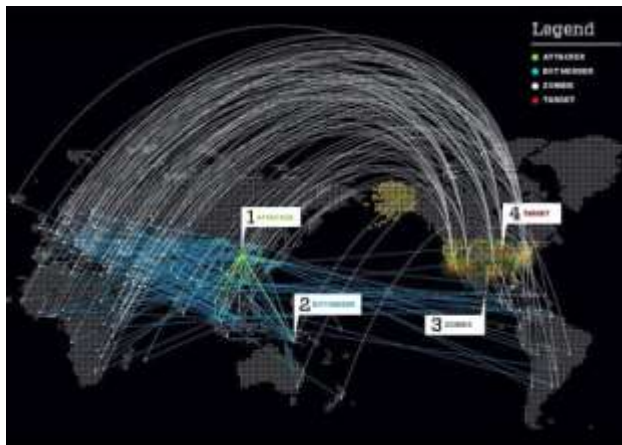

Excellent article on how passwords created and stored

Passwords

Your password

- Strong passwords are critical!
- **Botnets** and malicious **ne-er-do-wells** are constantly attempting to break into computers attached to the Internet! (Even my little Frodo VM at home)

<http://mac-internet-security-software-review.toptenreviews.com/how-do-i-know-if-my-computer-is-a-botnet-zombie-.html>

Top 50 usernames used by the ne'er-do-wells when attacking Opus

How to make a strong password

Current goal: require at least 2^{64} guesses

- Use upper case, lower case, punctuation, digits
- The longer the better (10 or more characters) $94^{10} \Rightarrow 65.64$ bits of entropy
- Random, not in any dictionary
- Something you can remember (Google "best password managers")
- Different password for different services
- Keep it secret -- change when compromised
- A MUST for your email accounts!

GOOD (but not truly random)

Wh01e#!!!!	(Whole sh'bang)
KuKu4 (co) 2	(Cuckoo for Cocoa Puffs)
#0p.&.s@ve	(shop and save)
Idl02\$d@y	(I do laundry on Tuesday)
Iwb@tB0aWw	(<u>I</u> <u>w</u> as <u>b</u> orn <u>a</u> t <u>t</u> he <u>b</u> ottom <u>o</u> f <u>a</u> <u>w</u> ishing <u>w</u> ell)

BETTER (pass phrases of 6 random words) $2000^6 \Rightarrow 65.79$ bits of entropy

splendid roll arrest boiling silk shelter
 heap pancake wooden complete inject ethereal
 few balance note sedate alike tense

passwd command

Change user's password

Syntax:

passwd [username]

Example:

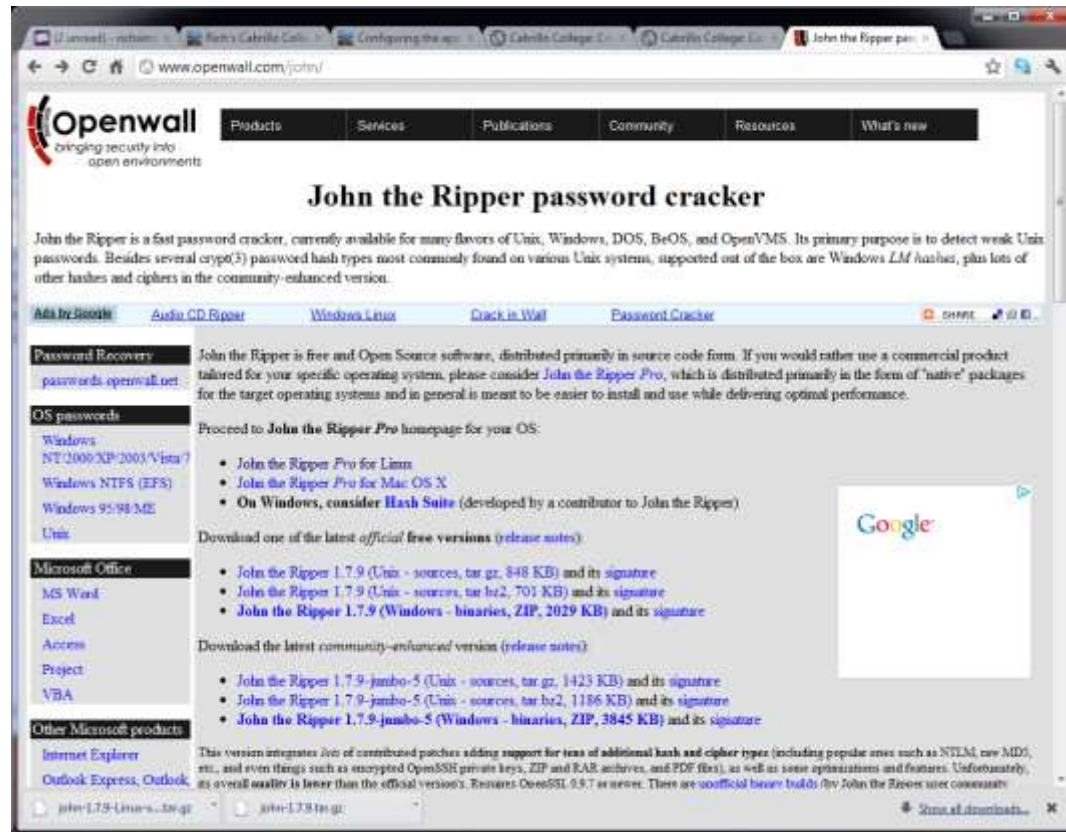

```
/home/cis90/simmsben $ passwd  
Changing password for user simben90.  
Changing password for simben90  
(current) UNIX password:   
New UNIX password:   
Retype new UNIX password:   
passwd: all authentication tokens updated successfully.  
/home/cis90/simmsben $
```

*Note, the passwords
are not echoed as
you type them.*

*This changes your password on Opus only (not
other VMs, the forum or BlackBoard)*

John the Ripper

An open source cracker that tries common passwords first followed by a brute force dictionary attack

Instructor: Use daughter and john-demo aliases to demo. Cat password.1st for common passwords.

Four users: deanna, chakotay, kira and chekov with weak passwords:

1234567
secret
terces
chekov1

```
[sudo] password for rsimms:
deanna:$6$M9MSUz0p$wfnU/Hbv86hG/Sbi0v9aaCl.bXhQixQd7qGUwrpGsAjUzU5Bum2QiBz9uTf7m
/IgwaZdImImuMIe7UX/yfFru.:2009:1701:Deanna Troi:/home/deanna:/bin/bash
chakotay:$6$eDZrKrit$gHcZ6zJnywZ5.XGSE60s53q4UJQoGDdEmjEk7k6R1hVZNV7zWtle9tXhWvE

kira:$6$1KD.GMs6$PJMd77APM05u6fFdFTpxoU2CEMLyQiQ11hDUQkC64kfxjgx/hXgU0Q5o/Lxuh80
Ob0g6tYbsXkr6fQAi5R0JF0:2011:1701:Kira Nerys:/home/kira:/bin/bash
chekov:$6$fj9vDNMO$JH9vCmNI fKY1kTlw/L05ynBHaeLrBV5i49cIcrnnT2W7ioCncWtX07pvnZ1pb
vu1Yp8ziSrEKsp3RoqLzXEbm.:2012:1701:Pavel Chekov:/home/chekov:/bin/bash
[rsimms@sister-of-opus ~]$ john-run
Start cracking passwords? (press Enter to continue)

Wed Sep  7 10:21:58 PDT 2016

Warning: detected hash type "sha512crypt", but the string is also recognized as
"crypt"
Use the "--format=crypt" option to force loading these as that type instead
Loaded 4 password hashes with 4 different salts (sha512crypt, crypt(3) $6$ [SHA5
12 64/64 OpenSSL])
Warning: OpenMP is disabled; a non-OpenMP build may be faster
Press 'q' or Ctrl-C to abort, almost any other key for status
chekov1      (chekov)
secret       (chakotay)
1234567     (deanna)
-
```

sister-of-opus

For Supplemental Study

<https://www.grc.com/haystack.htm>

How Big is Your Haystack?
and how well hidden is YOUR search?

Every password you use is the height of a haystack. After all, millions of common passwords are out there. Even today, an attacker is just using a "brute force" search - literally trying every possible combination of letters, numbers and then symbols until the combination you chose is discovered.

If every possible password is tried, sooner or later yours will be found.
The question is: **HOW** that be too soon... or enough later?

This interactive, free, online search space calculator allows you to experiment with password length and composition to discover the practical and statistical impact for the reality of using passwords that can only be kept through intensive search. Please see the discussion below for additional information.

100's Interactive Brute Force Password "Search Space" Calculator

Search Space Search Space Analysis:

Search Space Length (Alphabetic)	26
Search Space Length (Alphanumeric)	36 characters
[Exact] Search Space Size (Alphabetic)	26 ¹⁰ possible passwords
[Exact] Search Space Size (Alphanumeric)	36 ¹⁰ possible passwords
Search Space Size (as a power of 10)	1.34 x 10 ¹⁷

How Resistant to Exhaustive Search Are Passwords?

Default Attack Scenario	2.43 hours
Offline-First Attack Scenario	0.000124 seconds
Network-Only Attack Scenario	0.000000114 seconds

ConsumerReports.org

IMPORTANT!!! What This Calculator is NOT ...
It is NOT a "Password Strength Meter."

Password strength calculator for random passwords

<https://www.youtube.com/watch?v=1ExUsGIFCrU>

Why Passwords Fail

- Unless people are using 10 character, completely random passwords, then their password isn't really good.
- Example:
 - pE1\NI{i8m
- If you make them use a password like that, they'll write it down
 - Which also isn't good

CMPS 485: Password Complexity

Excellent presentation on making strong passwords

Housekeeping

Housekeeping

1. Send me your student survey today
2. Lab 1 due by 11:59PM (Opus time) tonight

Use **submit** to turn in your work

Grading Rubric (30 points)

5 points for each correct scavenger hunt item

3 points - optional extra credit questions (1 point each).

Use **verify** to see what you turned in

3. Last day to drop/add is this Saturday

Roll Call

If you are watching the archived video please email me to let me know your were here.

Turn off recording

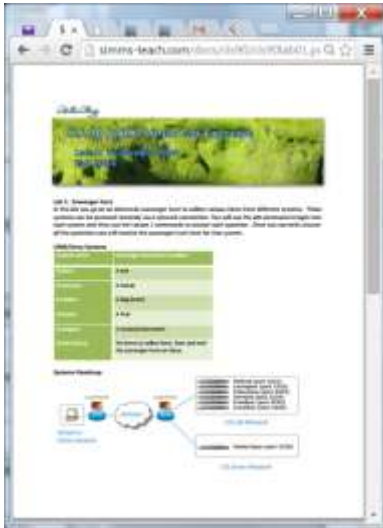

Do roll call using
both rosters

Turn on recording

Lab Assignments

Pearls of Wisdom:

- Don't wait till the last minute to start.
- The *slower* you go the *sooner* you will be finished.
- A few minutes reading the forum can save you hour(s).
- Line up materials, references, equipment and software ahead of time.
- It's best if you fully understand each step as you do it. Use Google or refer back to lesson slides to understand the commands you are using.
- Use Google when trouble-shooting
- Keep a growing cheat sheet of commands and examples.
- Study groups are very productive and beneficial.
- Use the forum to collaborate, ask questions, get clarifications and share tips you learned while doing a lab.
- Plan for things to go wrong and give yourself time to ask questions and get answers.
- **Late work is not accepted** so submit what you have for partial credit.

I'll start sending out LOR code names this week for everyone who sends or has sent me their survey.

Introduction to UNIX/Linux (CIS 90) Student Survey

Student Information

- Preferred first name: _____ Last name: _____
- Date: _____ Email address: _____
- Grading choice: pass/no-pass grade (pass/no-pass or no grade will be submitted)

Computer Background

- Previous computer classes or training taken:

- Work or other experience using computers:

Study Groups

Students often like to work together on assignments and prepare for tests. However you may not know anyone else in the class to work with.

- Would you like to participate in a CIS 90 study group? yes no
- If so:
 - Would you like to participate: face-to-face online either way
 - Would you like the instructor to help place you in a study group with other interested classmates? yes no

Course Objectives

- What are you hoping to learn in this class?

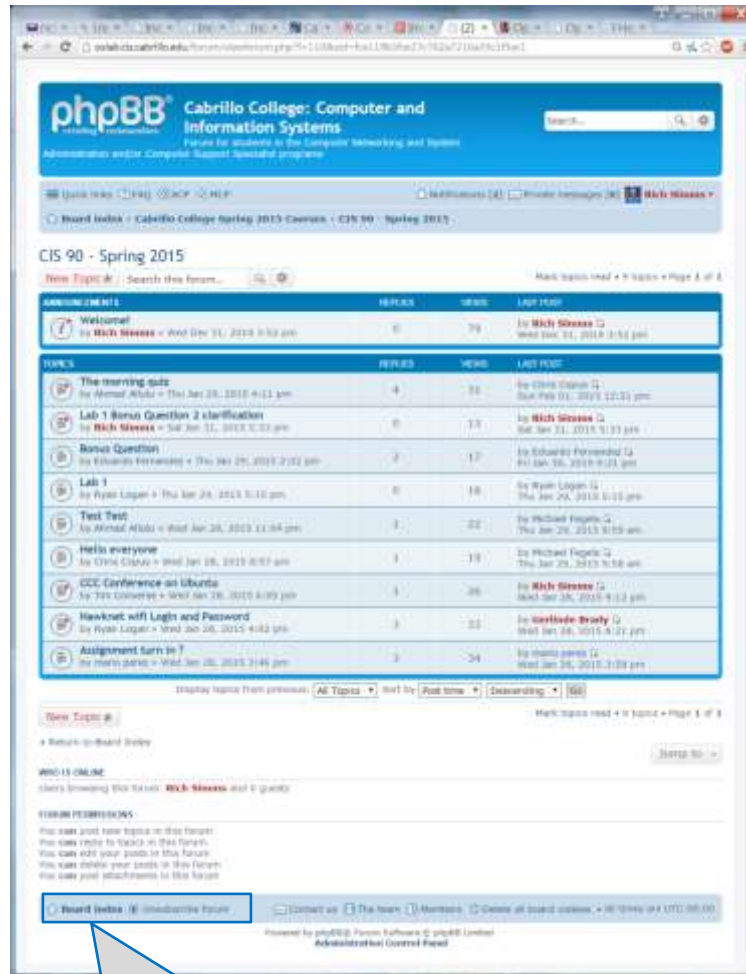

- Other comments or special learning needs?

(Please use a good computer printer to create your form.)

To get notifications of new forum posts

2) Go to the CIS 90 forum

3) Click the "Subscribe" link at the bottom so that it changes to "Unsubscribe".

1) Login to the forum

This is what it should look like

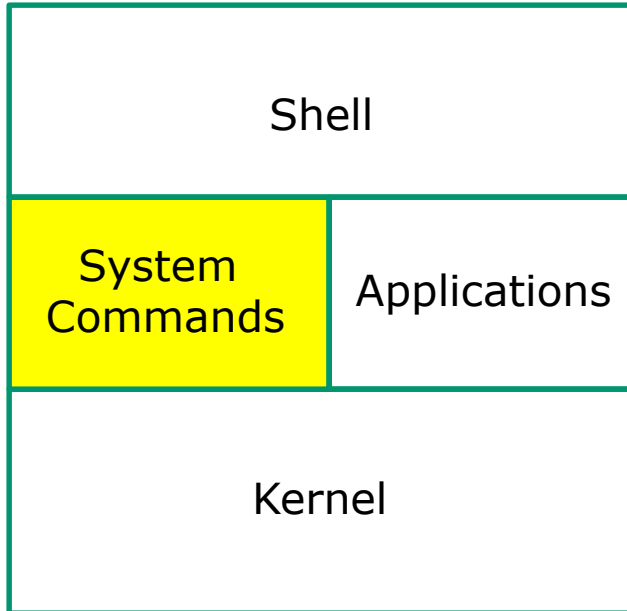

Lesson 2

Commmands

UNIX/Linux Architecture

System Commands

- 100's of system commands and utilities.
- Commands like **ls** (list directories), **cat** (print a file), **rm** (remove a file), ... etc.
- Utilities like **vi** (text editor), **sort** (sorts file contents), **find** (searches), ... etc.
- Larger utilities like **sendmail** (email), **tar** (backup), **tcpdump** (sniffer), ... etc.
- Administrative utilities like **useradd**, **groupadd**, **passwd** (change password), ... etc.

Lesson 2 commands for your toolbox

- | | |
|----------------|---|
| echo | - Prints text and variables |
| banner | - Make a banner |
| ls | - List directory contents |
| cat | - View file (name comes from <u>concatenate</u>) |
| file | - Show additional information about a file |
| type | - Shows where a command resides on the path |
| apropos | - Searches the whatis database for strings |
| whatis | - Searches the whatis database for commands |
| man | - Show the manual page for a command |
| info | - Alternate online documentation tool |
| bc | - Binary calculator |
| passwd | - Change password |
| set | - List all shell variables |
| env | - List all environment variables |

Follow Me

- echo** - Prints text and variables
- banner** - Make a banner

- ls** - List directory contents
- cat** - View file (name comes from concatenate)
- file** - Show additional information about a file
- type** - Shows where a command resides on the path
- apropos** - Searches the whatis database for strings
- whatis** - Searches the whatis database for commands
- man** - Show the manual page for a command
- info** - Alternate online documentation tool

- bc** - Binary calculator

Lesson 2

Commands

Supplemental examples

echo command

Print text and variables

Syntax:

echo *[string]*

```
/home/cis90/simben $ echo hello rich  
hello rich
```

```
/home/cis90/simben $ echo joy to the world  
joy to the world
```

banner command

Output a banner

Syntax:

banner *[string]*

banner *[string] [string] ... [string]*

```
/home/cis90/simben $ banner I Love Linux
```

```
#####
#
#
#
#
#
#####

#          ##### #          # #####
#          # #          # #
#          # #          # #
#          # #          # #####
#          # # # #          # #
#          # # # #          # #
##### ##### #          #####

#          ##### #          # #          # #          #
#          # #          # #          # #          #
#          # # #          # #          # #          #
#          # # #          # #          # #          #
#          # # #          # #          # #          #
#          # # #          # #          # #          #
##### ##### #          ##### #          #
```

*Similar to echo command
but outputs banner sized
letters instead*

ls command

List files or directory contents

Syntax:

ls [pathname]

ls [pathname] [pathname] ... [pathname]

```
/home/cis90/simben $ ls
```

```
bigfile  Lab2.0          mission      proposal3   text.fxd
bin      Lab2.1             Poems       small_town  timecal
empty    letter             proposal1   spellk      what_am_i
Hidden   Miscellaneous      proposal2   text.err
```

*Listing the contents of
the current directory*

```
/home/cis90/simben $ ls Poems/
```

```
Angelou Blake      Neruda  Shakespeare  Yeats
ant      Dickenson  nursery twister
```

*Listing the contents of
the Poems directory*

```
/home/cis90/simben $ ls mission /bin/ps /usr/local/bin/banner
/bin/ps mission /usr/local/bin/banner
```

Listing three files

*Regular files show as black, directories show as blue and
executable programs/scripts show as green*

cat command

Concatenate and view file contents

Syntax:

```
cat [pathname]
```

```
cat [pathname] [pathname] ... [pathname]
```

```
/home/cis90/simben $ cat letter  
Hello Mother! Hello Father!
```

```
Here I am at Camp Granada. Things are very entertaining,  
and they say we'll have some fun when it stops raining.
```

< snipped >

```
Wait a minute! It's stopped hailing! Guys are swimming!  
Guys are sailing! Playing baseball, gee that's better!  
Mother, Father, kindly disregard this letter.
```

Alan Sherman

file command

Show additional file information

Syntax:

file *[pathname]*

file *[pathname] [pathname] ... [pathname]*

```
/home/cis90/simben $ file letter
```

```
letter: ASCII English text
```

```
/home/cis90/simben $ file Miscellaneous/
```

```
Miscellaneous/: directory
```

```
/home/cis90/simben $ file timecal mission /usr/bin/cal
```

```
timecal: Bourne-Again shell script text executable
```

```
mission: ASCII English text
```

```
/usr/bin/cal: ELF 32-bit LSB executable, Intel 80386, version 1  
(SYSV), dynamically linked (uses shared libs), for GNU/Linux  
2.6.18, stripped
```

type command

Search for a command on the path

Syntax:

type [command]

type [command] [command] ... [command]

```
[rsimms@opus run]$ type cal
```

```
cal is /usr/bin/cal
```

cal is located in the /usr/bin directory

*name of the file
(command/program)*

*name of the directory
where file is found*

```
[rsimms@oslab ~]$ type bogus
```

```
-bash: type: bogus: not found
```

bogus is not on the user's path

```
[rsimms@opus run]$ type uname cal
```

```
uname is /bin/uname
```

uname is in the /bin directory

```
cal is /usr/bin/cal
```

cal is in the /usr/bin directory

```
[rsimms@oslab ~]$ type type
```

```
type is a shell builtin
```

*type is built into the shell
program*

apropos command

search the whatis database for strings

Syntax:

apropos *string*

```
/home/cis90/simben $ apropos echo  
echo (1) - display a line of text  
echo (1p) - write arguments to standard output  
echo [builtins] (1) - bash built-in commands, see bash(1)  
lessecho (1) - expand metacharacters  
pam_echo (8) - PAM module for printing text messages  
ping (8) - send ICMP ECHO_REQUEST to network hosts  
ping6 [ping] (8) - send ICMP ECHO_REQUEST to network hosts
```

whatis command

search the whatis database for commands

Syntax:

whatis *command*

```
/home/cis90/simben $ whatis echo
```

```
echo (1) - display a line of text
```

```
echo (1p) - write arguments to standard output
```

```
echo [builtins] (1) - bash built-in commands, see bash(1)
```

man command

Show the manual page (documentation) for a command

Syntax:

man *command*

/home/cis90/simben \$ **man** **cat**

```

simben90@oslab:~
CAT(1)                                User Commands                                CAT(1)
NAME
  cat - concatenate files and print on the standard output

SYNOPSIS
  cat [OPTION]... [FILE]...

DESCRIPTION
  Concatenate FILE(s), or standard input, to standard output.

  -A, --show-all
        equivalent to -vET

  -b, --number-nonblank
        number nonempty output lines

  -e    equivalent to -vE

  -E, --show-ends
        display $ at end of each line

  -n, --number
        number all output lines
  
```

The man page is a quick way to find what a command does and how to use it

Use these keys to scroll

Use q key to quit

info command

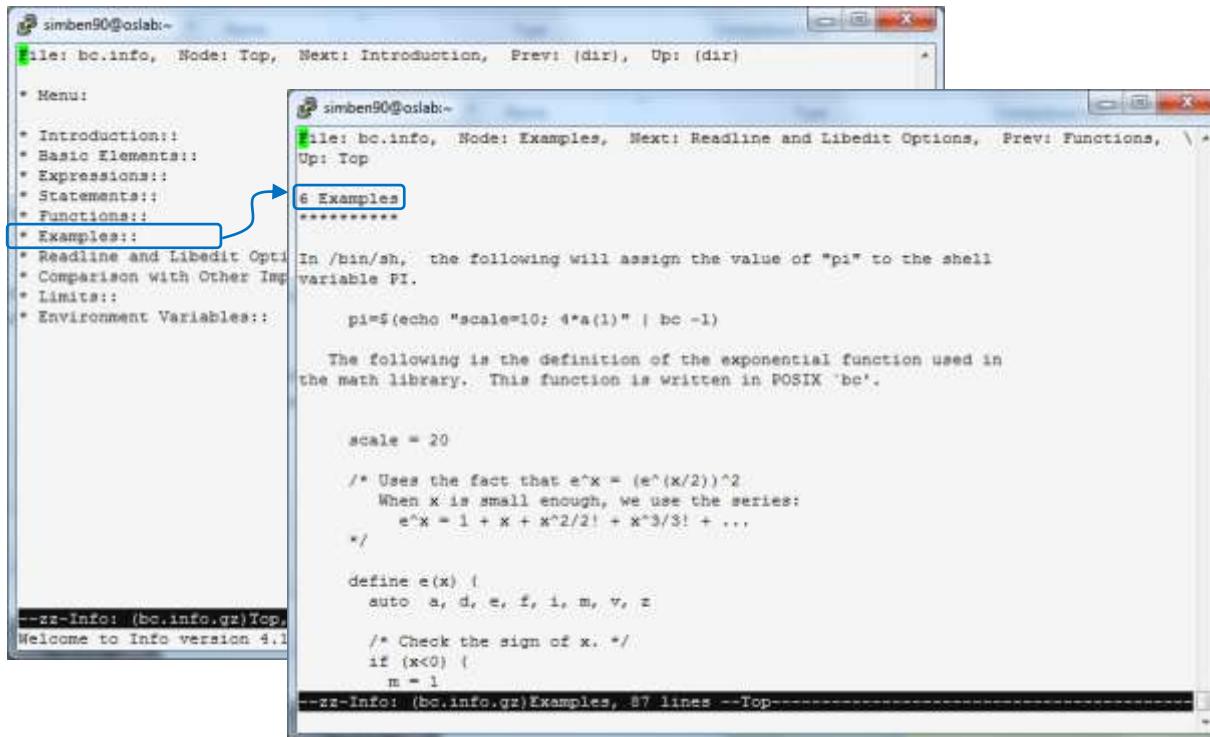

Alternate documentation tool for commands

Syntax:

info command

/home/cis90/simben \$ **info bc**

Similar to man but has links to additional pages

Use these keys to scroll

Use q key to quit

Use Enter to follow a link ()*

Use L to go back to last page

*Move cursor over an * and press Enter to follow link*

bc command

A binary calculator

Syntax:
bc

```
/home/cis90/simben $ bc
bc 1.06.95
Copyright 1991-1994, 1997, 1998, 2000, 2004, 2006
Free Software Foundation, Inc.
This is free software with ABSOLUTELY NO WARRANTY.
For details type `warranty'.
2+2
4
3*30
90
(3*31)+251*1.5
469.5
quit
/home/cis90/simben $
```

*Enter mathematical
expressions for bc to solve*

*Use quit to
end program*

The Path

The Path

The shell uses your path to locate commands to execute

- A path is a ordered set of directories along which the shell will search to locate commands to execute
- The path is defined by the PATH variable
- Show your path with **echo \$PATH**
- If you specify a command `xxxx` that the shell cannot find on the path it will print the following error message:

```
-bash: xxxx: command not found
```
- To run a command that is not on your path the complete absolute or relative pathname must be specified. e.g. **/usr/bin/uname** instead of just **uname**.

Shell Path

The path is used by the shell to locate commands to run

```
/home/cis90/simben $ echo $PATH  
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:/usr/sbin:/sbin:/home/cis90/simben/../../bin:/home/cis90/simben/bin:
```

The colon character is used to separate directories on the path

Locations of common commands

Directories of common commands

/bin

```

raimms@server0-01-
raimms@server0-01 raimms$ ls /bin
acsh          mv          fgrep       ls          pwd         sync
acsh         date        gawk        mail        rfd         tar
acsh.startin dd          grep        mkdir       rm          touch
awk          df          gcr         mkfs        rmdir       true
basename     dmesg       gunzip      mktemp      rpm         ulimit

cpio        ek         loadkeys   blkid      stty       ypserv
cs          fdisk     login      ps          stat
raimms@server0-01 raimms$
  
```

Most commands reside in these four directories. They can be found in other places as well. For example system administrators often put custom commands in /usr/local/bin.

The /bin directory

`ls /bin`

```

simben90@oslab:~/home/cis90/simben $ ls /bin
alsacmmute      dbus-monitor    hostname        netstat         sort
arch            dbus-send       ipcalc          nice            stty
awk            dbus-uuidgen   iptables-xml   nisdomainname  su
basename       dd              kbd_mode       ping            sync
bash           df              keyctl         ping6           tar
cat            dmesg          kill           plymouth       taskset
cgclassify     dnssdomainname link            ps              tsh
cgcreate       dmsinname      ln             pwd            touch
cgdelete       dumpkeys       loadkeys       raw            tracepath
cgexec         echo           login          rbash          tracepath6
cgget          ed             ls             readlink       traceroute
cgset          egrep          lsblk          red            traceroute6
cgsnapshot     env            lscgroup       redhat_lsb_init true
chgrp          ex             lasubsys       rm             umount
chmod          false          mail           rmdir          uname
chown          fgrep          mailx          rncnc          unicode_start
cp            find           mkdir          rpm            unicode_stop
cpio           findmnt        mknod          rvi            unlink
csh           gawk           mktemp         rview          usleep
cut           gettext        more           sed            vi
dash          grep           mount          setfont        view
date          gtar           mountpoint     setserial      ypdomainname
dbus-cleanu... gunzip         mv            sh             zcat
dbus-daemon   gzip          nano           sleep
  
```

/bin has essential commands used by everyone.

Do you see any of the commands we learned in Lesson 1 in the /bin directory? Type the names of those commands in the chat window.

The /usr/bin directory

`ls /usr/bin`

```

simben90@oslab:~
/home/cis90/simben $ ls /usr/bin

```

These are additional commands and utilities are typically used by system administrators.

*This is where commands like **useradd**, **userdel**, **tcpdump** are located.*

You will learn how to use these commands in CIS 191 and CIS 192.

Use the type command to find a command on the path

Syntax:

type [command]

type [command] [command] ... [command]

```
[rsimms@opus run]$ type cal
```

```
cal is /usr/bin/cal
```

cal is located in the /usr/bin directory

*name of the file
(command/program)*

*name of the directory
where file is found*

```
[rsimms@oslab ~]$ type bogus
```

```
-bash: type: bogus: not found
```

bogus is not on the user's path

```
[rsimms@opus run]$ type uname cal
```

```
uname is /bin/uname
```

```
cal is /usr/bin/cal
```

*uname is in the /bin directory
cal is in the /usr/bin directory*

```
[rsimms@oslab ~]$ type type
```

```
type is a shell builtin
```

type is built into the shell

Class Activity

- 1) Where are the **scavenge** and **sc** commands?
- 2) What kind of files are they?

Programs

Binary code
vs text scripts

UNIX commands & utilities are executable programs

A program can be binary code:

- Binary machine code is unprintable. A programmer must use hex dumps to examine it.
- Binary machine code executes very quickly and is targeted for a specific CPU instruction set.
- The binaries are produced by compiling source code written in a higher level language such as C, or C++.
- Examples: The ls command, the uname command, the bash shell itself.

A program can be a text-based script:

- A script can be directly viewed and printed.
- A script does not need to be compiled. It is interpreted on the fly and because of that doesn't run as fast as binary code.
- Common scripting languages include bash, perl and python.
- Examples: The apropos command.

Two example programs: apropos and cal

Lets take a deep dive on two random commands:

apropos - searches the whatis database for a string of text

cal - prints a calendar

*I'll be using this graphic to indicate
a program that has been loaded
into memory to be executed*

apropos

Try both programs (commands)
to see what they do

cal

*The **apropos** command searches the whatis database.*

```
/home/cis90/simben $ apropos uname
oldolduname [obsolete] (2) - obsolete system calls
olduname [obsolete] (2) - obsolete system calls
uname (1) - print system information
uname (1p) - return system name
uname (2) - get name and information about current kernel
uname (3p) - get the name of the current system
```

*The **cal** command prints a calendar*

```
/home/cis90/simben $ cal
    February 2012
Su Mo Tu We Th Fr Sa
      1  2  3  4
  5  6  7  8  9 10 11
12 13 14 15 16 17 18
19 20 21 22 23 24 25
26 27 28 29
```

Use **type** to find where the programs are on the path

apropos

cal

```
/home/cis90/simben $ type apropos cal
apropos is hashed (/usr/bin/apropos)
cal is /usr/bin/cal
```

The **apropos** and **cal** commands are both in the **/usr/bin** directory.

Note: Sometimes you will see "hashed" which means the command has been run previously and its location on the path has been temporarily "remembered". This is to speed up subsequent path searches for the same command.

Use the **ls** command to list the programs files

apropos

cal

```
/home/cis90/simben $ type apropos cal
apropos is hashed (/usr/bin/apropos)
cal is /usr/bin/cal
```

```
/home/cis90/simben $ ls /usr/bin/apropos /usr/bin/cal
/usr/bin/apropos  /usr/bin/cal
```

Note, both files show as green because they are executables (more on this later)

```
/home/cis90/simben $ ls -F /usr/bin/apropos /usr/bin/cal
/usr/bin/apropos*  /usr/bin/cal*
```

*FYI, use the -F option if color blind. Executables have a * suffix.*

Use the **file** command to get additional info on the files

apropos

cal

```
/home/cis90/simben $ file /usr/bin/apropos  
/usr/bin/apropos: POSIX shell script text executable
```

***apropos** is a shell script*

```
/home/cis90/simben $ file /usr/bin/cal  
/usr/bin/cal: ELF 32-bit LSB executable, Intel 80386, version  
1 (SYSV), dynamically linked (uses shared libs), for GNU/Linux  
2.6.18, stripped
```

***cal** is binary code (has been compiled
from higher level source code)*

Viewing the contents of the program files

`cat /usr/bin/apropos`

```
simben90@oslab:~
/home/cis90/simben $ cat /usr/bin/apropos
#!/bin/sh

# apropos -- search the whatis database for keywords.
# whatis -- idem, but match only commands (as whole words).
#
# Copyright (c) 1990, 1991, John W. Eaton.
# Copyright (c) 1994-1999, Andries E. Brouwer.
#
# You may distribute under the terms of the GNU General Public
# License as specified in the README file that comes with the man
# distribution.
#
# apropos/whatis-1.5# aeb.2003-08-01 (from man-1.6f)
#
# keep old PATH - 000323 - Bryan Henderson
# also look in /var/cache/man - 030#01 - aeb

program=`basename $0`

# When man pages in your favorite locale look to grep like binary files
# (and you use GNU grep) you may want to add the 'a' option to *grepopt1.
aproposgrepopt1='ai'
aproposgrepopt2=''
whatisgrepopt1='aiw'
whatisgrepopt2=''
```

The **cat** command can print the apropos file because it is a readable (and editable) **ASCII** text script

`cat /usr/bin/cal`

```
simben90@oslab:~
/home/cis90/simben $ cat /usr/bin/cal
-bash: /usr/bin/cal: command not found
/home/cis90/simben $
```

The **cat** command "chokes" trying to print the **binary** cal file because it is full of unprintable machine code.

How binary programs are created

cal

From: gcal-3.01.tar.gz

```
rsimms@nosmo:~/depot/gcal-3.01/src
[rsimms@nosmo src]$ head -50 gcal.c
/*

Lab #2...even though 'info uname' output states...
by Dan McNamara • Fri Feb 18, 2011 12:33 pm

Hi Folks,

Does anyone happen to know if there are ways to manipulate output from `uname` such that it is listed in the order that I want it to be? Under 'Commands' in Lab #2, question 11, we are asked what options would we use to display just the operating system, it's kernel release numbers and the machine's network node hostname. I got that okay. However, what if I wanted the output to display following the constructs of the question, i.e.:

```
opus.cabrillo.edu 2.6.18-164.el5 GNU/Linux (the default)
GNU/Linux 2.6.18-164.el5 opus.cabrillo.edu (what I'd like it to be)
```

Doing a `'man uname'` doesn't cover this but 'Info uname' states:

If multiple options or `'-a'` are given, the selected information is printed in this order:

```
KERNEL-NAME NODENAME KERNEL-RELEASE KERNEL-VERSION
MACHINE PROCESSOR HARDWARE-PLATFORM OPERATING-SYSTEM
```

I can live with the default output as it does answer the question...it just kind of bugs me that it's not in the order that I would prefer. Mixing the order of the options has no effect on the default output.

Just wondering....

*It all started when Dan did Lab 2 and wanted to change the way **uname** ordered its output!*

Class Activity

1) Where is the **scavenge** program?

Hint: use the **type** command with scavenge as the argument.

Type your answer in the chat window.

2) Is the **scavenge** command a binary executable or a shell script?

Hint: use the **file** command with the location of scavenge as the argument.

Type your answer in the chat window.

3) Can you **cat** the **scavenge** command?

Paste a line of output in the chat window.

4) Is **scavenge** a UNIX command?

Hint: use the **man** or **whatis** commands with scavenge as the argument.

Type your answer in the chat window.

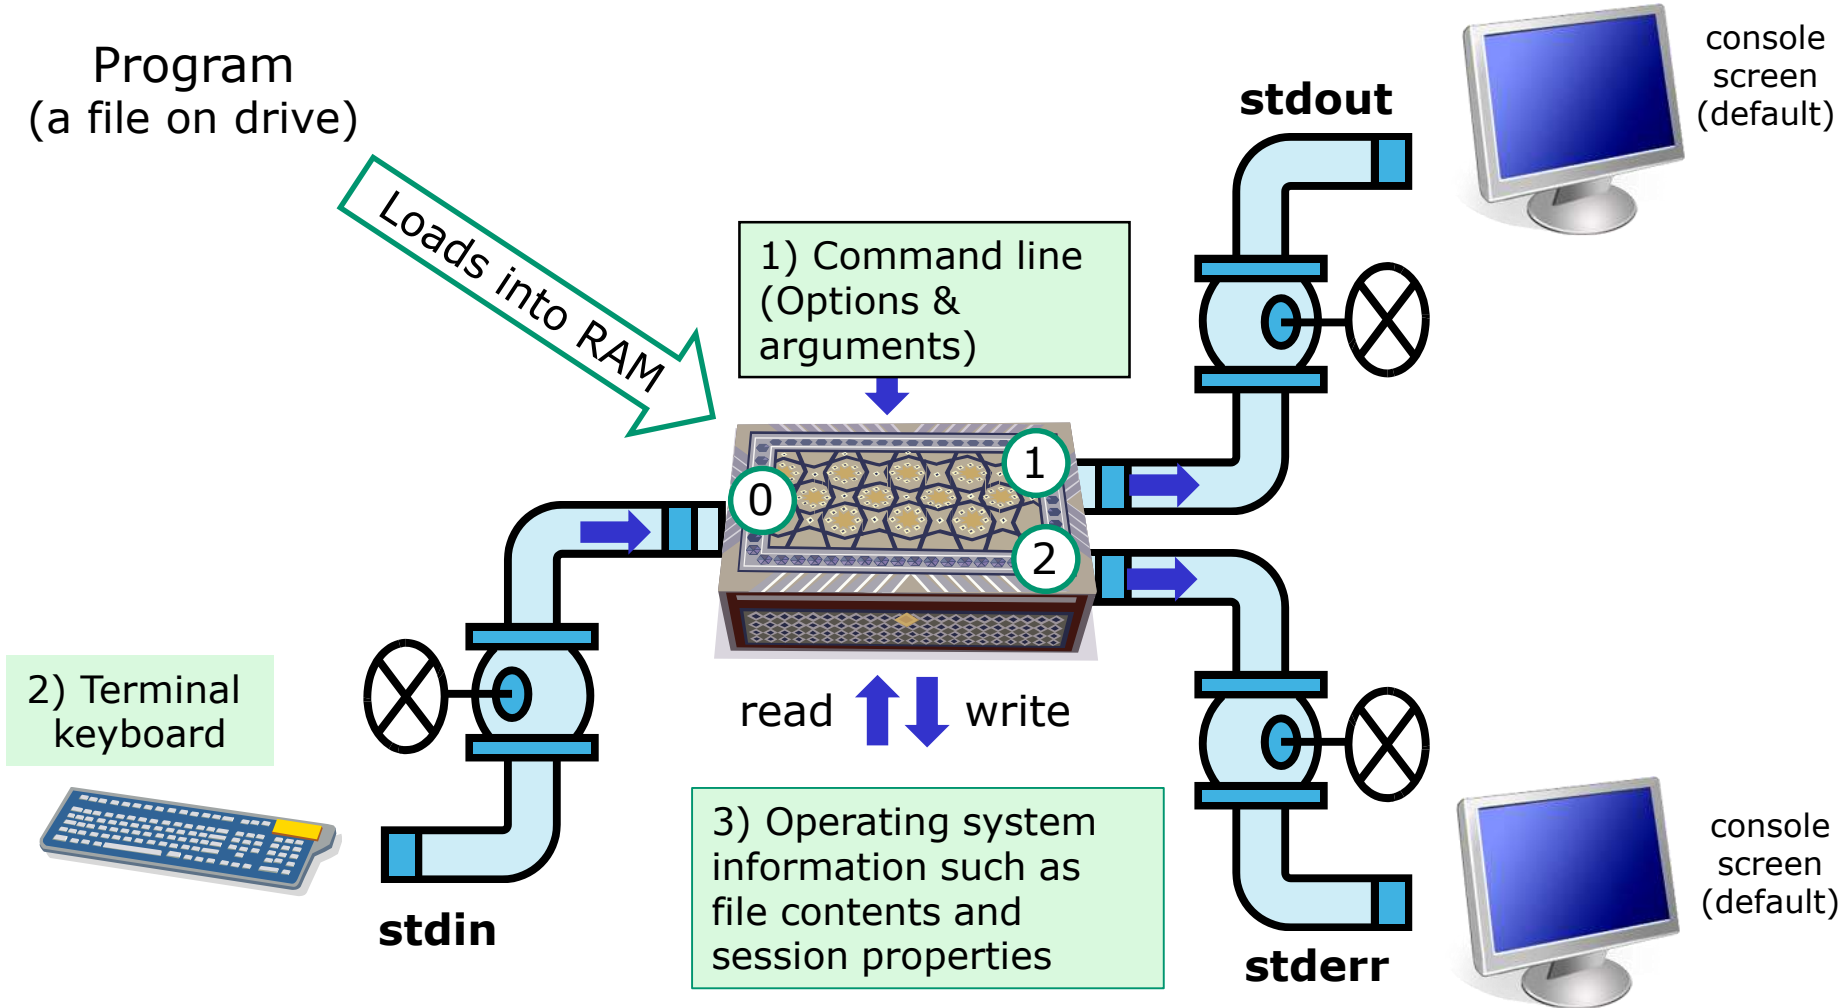

Inputs to Commmands

You will get these questions when you submit Lab 2

- 1) Name a UNIX command that gets its input only from the command line?
- 2) Name an interactive command that reads its input from the keyboard?
- 3) Name a UNIX command that gets its input from the Operating System?

Inputs to Commands

Name a UNIX command that gets its input only from the command line?

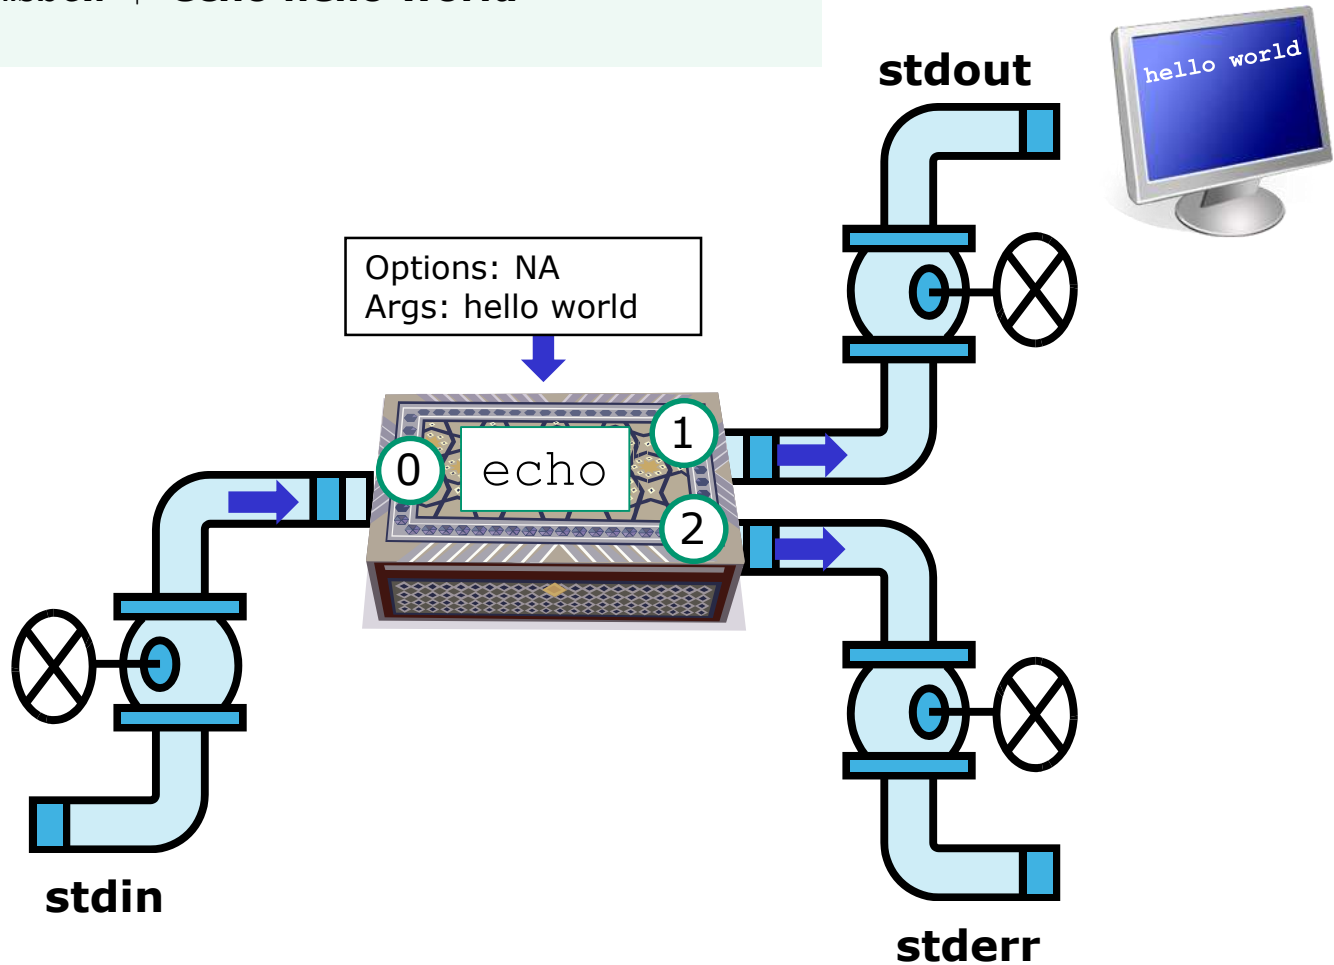

```
/home/cis90/simmen $ echo hello world  
hello world
```

```
/home/cis90/simben $ banner hello world  
# # ##### # # #####  
# # # # # # #  
# # # # # # #  
##### ##### # # # #  
# # # # # # # # # #  
# # # # # # # # # #  
# # ##### # # # #  
# # # # # # # # # #  
# # # # # # # # # #  
## ## ##### # # #####
```

The **echo** and **banner** commands are examples of commands that get their input from the command line

echo command

```
/home/cis90/simmsben $ echo hello world  
hello world
```

The **echo** command is an example of a command that gets its input from the command line

Name an interactive command that reads its input from the keyboard?

```
/home/cis90/simmsben $ bc
bc 1.06
Copyright 1991-1994, 1997, 1998, 2000 Free

Command Syntax

(grammar lesson)

Some new vocabulary

from Dictionary.com

parse [pahrs, pahrz] **verb, parsed, pars-ing.**
verb (used with object)

1. to analyze (a sentence) in terms of grammatical constituents, identifying the parts of speech, syntactic relations, etc.
2. to describe (a word in a sentence) grammatically, identifying the part of speech, inflectional form, syntactic function, etc.
3. Computers . to analyze (a string of characters) in order to associate groups of characters with the syntactic units of the underlying grammar.

One of the things the shell does is parse what is typed by the user. This results in the command line being analyzed to identify the command, the options, the arguments and any redirection.

Command Syntax

Command

Options

Arguments

Redirection

Command – is the name of an executable program file.

Options – a special type of argument that is used to control how the program operate operates.

Arguments – the objects the command is directed to work upon. Multiple arguments are separated by spaces.

Redirection – The default input stream (stdin) is from the console keyboard, the default output (stdout) and error (stderr) streams go to the console screen. Redirection can modify these streams to other files or devices.

Command Syntax Rules

Command

Options

Arguments

Redirection

Command – usually at the beginning of the line

Options – follow the command, usually starts with a dash, may be combined after a single “-” or separated by spaces. Note that `-iad` is the same as `-i -a -d`

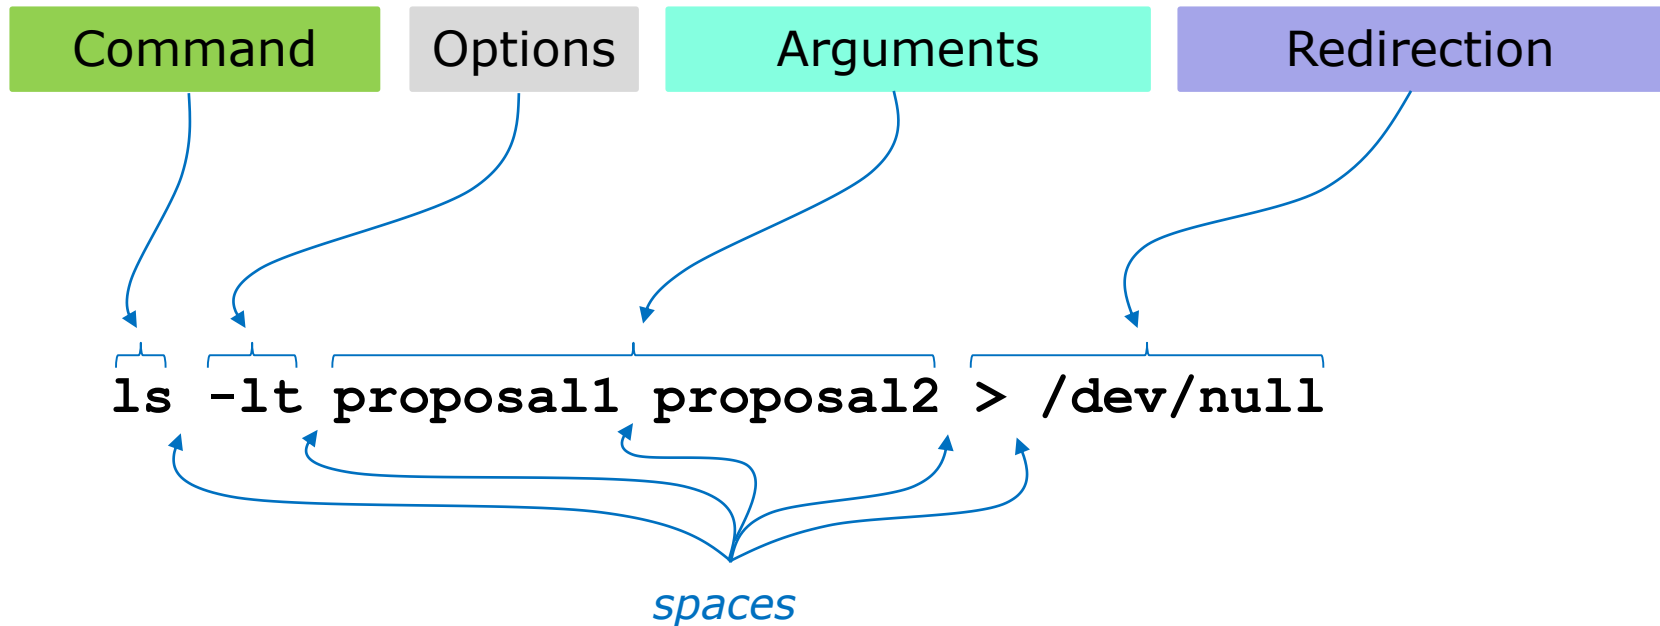

Arguments – follow the options. Multiple arguments must be separated by spaces.

Redirection – Will be a `<`, `>`, `>>`, `2>` or `|` followed by the I/O redirection.

Spaces are required between commands, options, arguments and any redirection

Multiple spaces are treated as a single space (unless inside quotes)

Command Syntax Example

Don't worry now about what the example command above does, for now we just want to be able to parse it into the command, options, arguments and any redirection

More Command Syntax Examples

Command

Options

Arguments

Redirection

The command syntax is the underlying grammar used to parse the command line

```
/home/cis90/simben $ hostname
opus.cabrillo.edu
```

```
/home/cis90/simben $ uname -o
GNU/Linux
```

```
/home/cis90/simben $ ls -ld Poems/
drwxr-xr-x 5 simben90 cis90 4096 Jan 18 2004 Poems/
```

```
/home/cis90/simben $ ls -li letter > /dev/null
```

More on redirection in later lessons

Redirection:

How many: NA
What is redirected: NA

Variables

Shell Variables

- A shell variable gives a name to a location in memory where data can be kept during the session. This data value is lost when a session ends.
- The shell variables used to customize the users environment are called *Environment* variables.
- When parsing, the shell will look for a \$ followed by a variable name and replace it with the value of the variable.

To show the value of a variable use the **echo** command and precede the variable name with a \$

echo \$PS1 *shows the current value of the PS1 variable*

To change the value of a variable, use an = sign with no surrounding blanks and no \$

PS1="Enter next command: " *sets the PS1 prompt variable*

Shell Environment Variables

These variables are automatically set for you when you log in

Shell Variable	Description
HOME	Users home directory (starts here after logging in and returns with a <code>cd</code> command (with no arguments))
LOGNAME	User's username for logging in with.
PATH	List of directories, separated by ':'s, for the Shell to search for commands (which are program files) .
PS1	The prompt string.
PWD	Current working directory
SHELL	Name of the Shell program being used.
TERM	Type of terminal device , e.g. dumb, vt100, xterm, ansi, linux, etc.

Showing common environment variable values

```
/home/cis90/simben $ echo $TERM  
xterm
```

Shows your terminal type

```
/home/cis90/simben $ echo $PWD  
/home/cis90/simben
```

Shows your current working directory

```
/home/cis90/simben $ echo $PS1  
$PWD $
```

Shows your level 1 prompt string

```
/home/cis90/simben $ echo $HOME  
/home/cis90/simben
```

Shows your home directory

```
/home/cis90/simben $ echo $SHELL  
/bin/bash
```

Shows your shell

```
/home/cis90/simben $ echo $PATH  
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:  
/usr/sbin:/sbin:/home/cis90/simben/./bin:/home/cis90/simben/bin:.
```

Shows the directories making up your path

Note that Terminal type ≠ Terminal device

The TERM variable holds the terminal type which is different than the terminal device

```

simben90@oslab:~
simben90@oslab.cabrillo.edu's password:

    //--\
   (\=_/)
   ~ ~

Welcome to Opus
Serving Cabrillo College

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $ tty
/dev/pts/1
/home/cis90/simben $ echo $TERM
xterm
/home/cis90/simben $
  
```

*Use **tty** to see terminal device*

*Use **echo \$TERM** to see terminal type*

Note the TERM variable gets set every time we log into Opus

Setting Variable Values

To change the value of a variable, use an = sign with no surrounding blanks and no \$

```
/home/cis90/simben $ echo $TERM  
xterm
```

Show the current terminal type

```
/home/cis90/simben $ TERM=dumb  
/home/cis90/simben $ echo $TERM  
dumb
```

Change the terminal type and display the new value

```
/home/cis90/simben $ TERM=xterm  
/home/cis90/simben $ echo $TERM  
xterm
```

Change the terminal type back to the original value

In Lab 2 you will see what happens when the terminal type is changed

The SHELL variable

```
/home/cis90/simben $ echo $SHELL
/bin/bash
```

The SHELL variable will be set to the name of the shell you are running. Benji is running the bash shell.

```
/home/cis90/simben $ ps
  PID TTY          TIME CMD
 7364 pts/1        00:00:00 bash
 7745 pts/1        00:00:00 ps
```

In Lesson 1 we used the ps command to see the shell being run

```
/home/cis90/simben $ cat /etc/passwd | grep simben
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

The shell that is run is determined by the entry in /etc/passwd

Changing the shell prompt

(PS1 variable)

The PS1 variable

```
/home/cis90/simben $ echo $PS1  
$PWD $
```

The PS1 variable defines the shell prompt

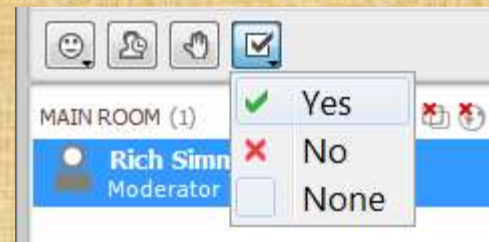

Follow Me

```
/home/cis90/simben $ PS1="By your command > "  
By your command > date  
Mon Sep 3 17:25:32 PDT 2012  
By your command >
```

```
By your command > PS1='What can I do for you $LOGNAME? '  
What can I do for you simben90? date  
Mon Sep 3 17:26:10 PDT 2012  
What can I do for you simben90?
```

```
What can I do for you simben90? PS1='$PWD $ '  
/home/cis90/simben $ date  
Mon Feb 3 18:06:30 PST 2014
```

Give me a green check ✓ if you are successful and a red x if stuck on CCC Confer

*Need a fresh start -- just log out
and back in again and your prompt
will be back to normal!*

Changing the shell prompt

More PS1 prompt examples

Changing the prompt

There are some special `\`codes you can insert when setting the prompt

\h gets replaced by the hostname

\W gets replaced by the base working directory

\u gets replaced by the username

```
/home/cis90/simben $ PS1="[\u@\h \W]\$ "
```

```
[simben90@oslab ~]$ date
```

```
Mon Sep 3 17:38:54 PDT 2012
```

```
[simben90@oslab ~]$
```

\\$ gets replaced by a \$ for regular users or # if the root user

user name

hostname

*working directory
(~ is shorthand for the home directory)*

indicates regular user

Changing the prompt

Special Codes	Meaning
\!	history command number
\#	session command number
\d	date
\h	hostname
\n	new line
\s	shell name
\t	time
\u	user name
\w	entire path of working directory
\W	only working directory
\\$	\$ or # (for root user)

The PS1 variable (defines the prompt) can be set to any combination of text, variables and these special codes.

Changing the prompt

Prompt string	Result
PS1='\$PWD \$ '	/home/cis90/simmsben/Poems \$
PS1="\w \$ "	~/Poems \$
PS1="\W \$ "	Poems \$
PS1="\u@\h \$ "	simmsben@opus \$
PS1='\u@\h \$PWD \$ '	simmsben@opus /home/cis90/simmsben/Poems \$
PS1='\u@\\$HOSTNAME \$PWD \$ '	simmsben@opus.cabrillo.edu /home/cis90/simmsben/Poems \$
PS1='\u \! \$PWD \$ '	simmsben 825 /home/cis90/simmsben/Poems \$
PS1="[\u@\h \W] \$ "	[simmsben@opus Poems] \$

Important: Use single quotes around variables that change. For example if you use \$PWD with double quotes, the prompt will not change as you change directories! More on this later ...

*Need a fresh start -- just log out
and back in again and your prompt
will be back to normal!*

*The **env** command shows just the environment variables (a subset of the shell variables)*

The Shell (six steps)

The Shell

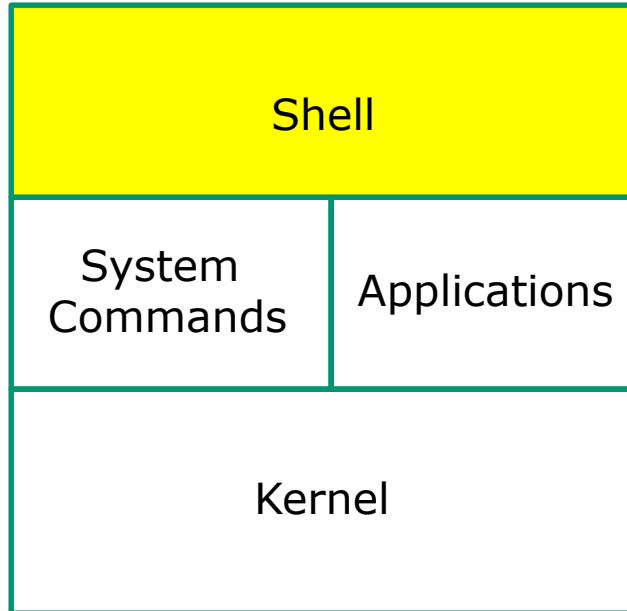

- Allows users to interact with the computer via a **“command line”**.
- **Prompts** for a command, parses the command, finds the right program and gets that program executed.
- Is called a **“shell”** because it hides the underlying operating system.
- Multiple shell programs are available: **sh** (Bourne shell), **bash** (Bourne Again shell), **csh** (C shell), **ksh** (Korn shell).
- The shell is a **user interface** and a **programming language** (scripts).
- GNOME and KDE desktops could be called **graphical shells**

Life of the Shell

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

Life of the Shell

Example:

```
/home/cis90/simben $ ls -lt proposal1 proposal2
-rw-r--r--. 1 simben90 cis90 1074 Aug 26 2003 proposal1
-rw-r--r--. 1 simben90 cis90 2175 Jul 20 2001 proposal2
/home/cis90/simben $
```

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

Lets take a deep dive into how a command gets executed.

Note it is always a team effort by both the shell and the command.

Life of the Shell

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

1) Prompt user for a command

Example: *The shell begins by outputting the prompt (which is based on the PS1 variable)*

```
/home/cis90/simben $ ls -lt proposal1 proposal2
```

Then you type the command

FYI, you can mimic outputting the prompt yourself with these commands:

```
/home/cis90/simben $ echo $PS1 to show value of PS1 variable
```

```
$PWD $
```

```
/home/cis90/simben $ echo $PWD $ echo the output of the previous command
```

```
/home/cis90/simben $ was output by the echo command above
```

```
/home/cis90/simben $ was output by the shell (the same output)
```

Life of the Shell

2) Parse command user typed

Shell Steps

- 1) Prompt
- 2) **Parse**
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

Example:

```
ls -lt proposal1 proposal2
```

- Command = ls
- 2 Options = l, t
- 2 Arguments = proposal1, proposal2
- No Redirection

During the parse step the shell identifies all options & arguments, handles any metacharacters and redirection

Life of the Shell

3) Search path for the program to run

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

ls -lt proposal1 proposal2

Use this command to see the path directories (separated by ':'s) on your path

```
/home/cis90/simben $ echo $PATH
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:/usr/sbin
:/sbin:/home/cis90/simben/../../bin:/home/cis90/simben/bin:.
```

*The shell will search each directory in order for an **ls** command*

```
/usr/lib/qt-3.3/bin no ls command found here
/usr/local/bin no ls command found here
/bin YES! - an ls command is in the /bin directory
/usr/bin
/usr/local/sbin
/usr/sbin
/sbin
/home/cis90/simben/../../bin
/home/cis90/simben/bin
.
```

Note: If the shell cannot find the command on the path it will output "command not found"

Try mimicking what the shell does to search for ls:

```
/home/cis90/simben $ ls /usr/lib/qt-3.3/bin/ls
ls: cannot access /usr/lib/qt-3.3/bin/ls: No such file or directory

/home/cis90/simben $ ls /usr/local/bin/ls
ls: cannot access /usr/local/bin/ls: No such file or directory

/home/cis90/simben $ ls /bin/ls
/bin/ls
```

Life of the Shell

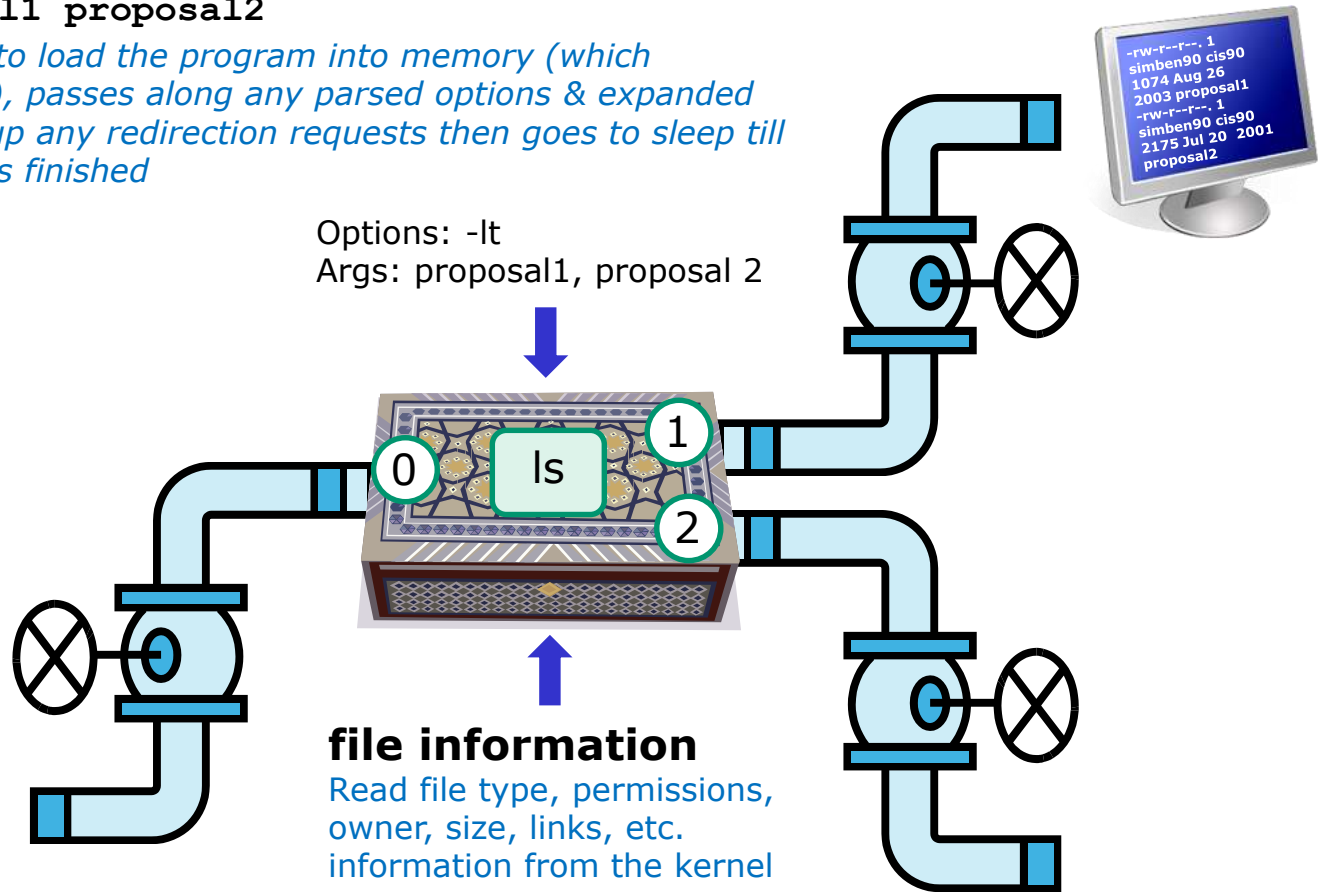

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) **Execute**
- 5) Nap
- 6) Repeat

4) Execute the command

```
ls -lt proposal1 proposal2
```

Invokes the kernel to load the program into memory (which becomes a process), passes along any parsed options & expanded arguments, hooks up any redirection requests then goes to sleep till the new process has finished

Life of the Shell

5) Nap while the command (process) runs to completion

(The shell, itself a loaded process, goes into the sleep state and waits till the command process is finished)

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) **Nap**
- 6) Repeat

```
/home/cis90/simben $ ls -lt proposal1 proposal2  
-rw-r--r--. 1 simben90 cis90 1074 Aug 26 2003 proposal1  
-rw-r--r--. 1 simben90 cis90 2175 Jul 20 2001 proposal2
```

The shell sleeps while the ls process outputs these two lines

Life of the Shell

6) And do it all over again
... go to step 1

Shell Steps

- 1) Prompt
- 2) Parse
- 3) Search
- 4) Execute
- 5) Nap
- 6) Repeat

Life of the Shell

A /home/cis90/simben \$ **Ls -lt proposal1 proposal2**
-bash: Ls: command not found

*What's wrong?
Who output the error?*

B /home/cis90/simben \$ **ls -lt proposal1 proposal5**
ls: cannot access proposal5: No such file or directory
-rw-r--r--. 1 simben90 cis90 1074 Aug 26 2003 proposal1

*What's wrong?
Who output the error?*

C /home/cis90/simben \$ **ls -lw proposal1 proposal2**
ls: invalid line width: proposal1

*What's wrong?
Who output the error?*

D /home/cis90/simben \$ **ls -lt proposal1proposal2**
ls: cannot access proposal1proposal2: No such file or directory

*What's wrong?
Who output the error?*

E /home/cis90/simben \$ **ls-lt proposal1 proposal2**
-bash: ls-lt: command not found

*What's wrong?
Who output the error?*

Meta- characters

Metacharacters

When parsing, the shell gives special meaning to metacharacters

" - use double quotes to preserve blanks and allow variable expansion

' - use single quotes to preserve blanks and block variable expansion

\$ - use to show the value rather than the name of a variable

;- allows multiple commands on one line

<enter key> - The invisible newline control character marking the end of a command

= - use to set variables to new values

\ - removes (escapes) the special powers of a metacharacter

Other metacharacters we will learn about later include:

*?, *, <, >, >>, !, |, [], {}, &, && and ||*

Metacharacters - quotes

- Double " quotes allow variable expansion
- Single ' quotes block variable expansion
- Both double and single quotes preserve blanks

```
/home/cis90/simben $ echo I am $LOGNAME (3 arguments)
I am simben90 Extra blanks ignored, variable expanded
```

```
/home/cis90/simben $ echo "I am $LOGNAME" (1 argument)
I am simben90 Extra blanks preserved, variable expanded to show value
```

```
/home/cis90/simben $ echo 'I am $LOGNAME' (1 argument)
I am $LOGNAME Extra blanks preserved, variable expansion blocked
```

Double quotes called weak quotes because they allow the shell to expand variables. Single quotes are called strong quotes because they block the shell from expanding variables.

Metacharacters - quotes

```
/home/cis90/simben $ echo '"double quotes"'  
"double quotes"
```

```
/home/cis90/simben $ echo "'single quotes'"  
'single quotes'
```

Tip: single quotes can be used to output double quotes and vice-versa

Metacharacters - <enter key>

<enter key> - The invisible *newline* control character marking the end of a command

```
[rsimms@opus ~]$ ps
```

PID	TTY	TIME	CMD
19015	pts/0	00:00:00	bash
19378	pts/0	00:00:00	ps

```
[rsimms@opus ~]$ hostname
```

opus.cabrillo.edu

```
[rsimms@opus ~]$ echo "Use <enter key> to end the command"
```

Use <enter key> to end the command

Pressing the Enter key here generates an invisible <newline> character

Metacharacters - \ (backslash)

The back slash \ removes (escapes) the special powers of a metacharacter

```
[rsimms@oslab ~]$ echo a b c d e f
a b c d e f
```

```
[rsimms@opus ~]$ echo a b c \
> d e f
a b c d e f
```

Escape the invisible newline <enter key> which marks the end of a command

```
[rsimms@opus ~]$ echo $PS1
[\u@\h \W]\$
```

```
[rsimms@opus ~]$ echo \$PS1
$PS1
```

Escape the \$ (which shows the value of the variable)

```
[rsimms@opus ~]$ echo "Hello World"
Hello World
```

```
[rsimms@opus ~]$ echo \"Hello World\"
\"Hello World\"
```

Escape the double quote marks

Metacharacters - ; (semi-colon)

The semi-colon ; allows multiple commands on one line

```
[simmsben@opus Poems]$ hostname; uname; echo $LOGNAME; ls
opus.cabrillo.edu
Linux
simmsben
ant Blake nursery Shakespeare twister Yeats
```

*Four commands on
one line*

Shortcuts

More on the Command Line

Handy Shortcuts

- Use up and down arrows to “retype” previous commands
- Left and right arrow for editing current command
- Use <tab> to complete filenames automatically

```

/home/cis90/simben $ hostname; name; echo $LOGNAME; ls Poems/Blake/
oslab.cishawks.net
-bash: name: command not found
simben90
jerusalem tiger
/home/cis90/simben $ hostname; uname; echo $LOGNAME; ls Poems/Blake/
oslab.cishawks.net
Linux
simben90
jerusalem tiger
  
```

Press <tab> after the P and B and the shell fills in the rest

Press up arrow and the shell retypes the previous command

Use the left arrow to backup and fix the typo (uname instead of name)

Life without a path

-bash: xxxx: command not found

Don't get mad, just fix your path!

The Path

The shell uses your path to locate commands to execute

- A path is a ordered set of directories along which the shell will search to locate commands to execute
- The path is defined by the PATH variable
- Show your path with **echo \$PATH**
- If you specify a command `xxxx` that the shell cannot find on the path it will print the following error message:

```
-bash: xxxx: command not found
```
- To run a command that is not on your path the complete absolute or relative pathname must be specified. e.g. `/usr/bin/uname`

The Path

Use this command to see the directories (separated by ':'s) on your path

```
/home/cis90/simben $ echo $PATH
/usr/lib/qt-
3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:/usr/sbin:/sbin:/home/c
is90/simben/../../bin:/home/cis90/simben/bin:.
```

The shell will search for the ls command along the path in this order:

```
/usr/lib/qt-3.3/bin
/usr/local/bin
/bin
/usr/bin
/usr/local/sbin
/usr/sbin
/sbin
/home/cis90/simben/../../bin
/home/cis90/simben/bin
```

•  *yes, . is a directory too and it is whatever directory you have currently changed into*

Experiment – Breaking the Path

The **echo**
command is
built into bash

```
/home/cis90/simben $ type echo ps tty  
echo is a shell builtin  
ps is /bin/ps  
tty is /usr/bin/tty
```

The **tty** command
is in the `/usr/bin`
directory

the **ps**
command is in
the `/bin`
directory

Experiment – Breaking the Path

Default path

```
/home/cis90/simben $ echo I love Linux
I love Linux
/home/cis90/simben $ date
Mon Sep  3 15:17:52 PDT 2012
/home/cis90/simben $ tty
/dev/pts/2
/home/cis90/simben $
```

TROUBLE!

```
/home/cis90/simben $ PATH=""
/home/cis90/simben $ echo $PATH
/home/cis90/simben $
```

Break the path by setting it to null

No path

```
/home/cis90/simben $ echo I love Linux
I love Linux
/home/cis90/simben $ date
-bash: date: No such file or directory
/home/cis90/simben $ tty
-bash: tty: No such file or directory
```

*Only **echo** works because it is built into the shell!*

```
/home/cis90/simben $ echo $PATH
```

```
/home/cis90/simben $
```

There is nothing on the path!

Experiment – Restoring the Path

```
/home/cis90/simben $ PATH=/bin
/home/cis90/simben $ echo $PATH
/bin
/home/cis90/simben $
```

*Add the /bin
directory to the path*

*date works
because it
resides in the
/bin directory
which is now
on the path*

```
/home/cis90/simben $ echo I love Linux
I love Linux
/home/cis90/simben $ date
Mon Sep  3 15:24:19 PDT 2012
/home/cis90/simben $ tty
-bash: tty: No such file or directory
```

*echo works
because it is built
into the shell*

*tty does not work because it is
in the /usr/bin directory which is
not on the path*

```
/home/cis90/simben $ echo $PATH  
/bin  
/home/cis90/simben $
```

Experiment – Restoring the Path

```
/home/cis90/simben $ PATH=$PATH:/usr/bin  
/home/cis90/simben $ echo $PATH  
/bin:/usr/bin  
/home/cis90/simben $
```

*Append the
/usr/bin directory
to the path*

```
/home/cis90/simben $ echo I love Linux  
I love Linux  
/home/cis90/simben $ date  
Mon Sep 3 15:24:19 PDT 2012  
/home/cis90/simben $ tty  
/dev/pts/2
```

All three commands work because /bin and /usr/bin are on the path.

The shell will only run commands found in the directories that make up the path

```
/home/cis90/simben $ echo $PATH  
/bin:/usr/bin  
/home/cis90/simben $
```

*Need a fresh start -- just log out
and back in again and your path
will be back to normal!*

DOCS

Using man (manual) pages

Type the **man** command followed by the name of the command you want documentation on.

Example: **man bc**

```

simmsben@opus:~
/home/cis90/simmsben $
/home/cis90/simmsben $ man bc
bc(1)                                     bc(1)

NAME
    bc - An arbitrary precision calculator language

SYNTAX
    bc [ -hlwsqv ] [long-options] [ file ... ]

VERSION
    This man page documents GNU bc version 1.06.

DESCRIPTION
    bc is a language that supports arbitrary precision numbers with inter-
    active execution of statements. There are some similarities in the
    syntax to the C programming language. A standard math library is
    available by command line option. If requested, the math library is
    defined before processing any files. bc starts by processing code from
    all the files listed on the command line in the order listed. After
    all files have been processed, bc reads from the standard input. All
    code is executed as it is read. (If a file contains a command to halt
    the processor, bc will never read from the standard input.)
  
```

Use these keys to scroll

Use q key to quit

Using Google

Do a Google search on "linux xxx command" where xxx is the command you want documentation for.

Example: **google** linux bc command

The image shows two overlapping browser windows. The left window displays a Google search for "linux bc command", showing search results from About.com and other sites. The right window shows the "bc - Linux Command" page from About.com, which includes a "DID YOU KNOW..." advertisement for PayPal, a search bar, and a table with details about the bc command.

NAME	bc - An arbitrary precision calculator language
SYNTAX	bc [-hlwsgv] [long-options] [file ...]
DESCRIPTION	bc is a language that supports arbitrary precision numbers with interactive execution of statements. There are some similarities in the syntax to the C programming language. A standard math library is available by command line option. If requested, the math library is defined before processing any files. bc starts by processing code from all the files listed

Other Documentation

- **whatis** *command* *same as the **man -f** command*
- **apropos** *command* *same as the **man -k** command*
- **info** *command*

The Linux Information Project

Welcome to The Linux Information Project (LINFO). This project is dedicated to providing high quality, comprehensive and easily accessible information about Linux and other free software. (New to Linux? Start here.)

New on This Site:

- October 27: root Definition page updated.
- October 19: Hard Link Definition page added.
- October 12: Characters: A Brief Introduction page updated.
- October 03: Byte Definition page updated.
- September 27: PDP-7 Definition page updated.
- September 24: The unmount Command page added.
- September 20: The head Command page updated.

Assignment

Lab 2 - Using Commands

Lab 2: Using Commands

The purpose of this lab is to explore command usage with the shell and miscellaneous UNIX commands.

Preparation
Everything you need to do this lab can be found in the Lesson 2 materials on the CIS 90 Calendar: <http://simms-teach.com/cis90calendar.php>. Review carefully all Lesson 2 slides, even those that may not have been covered in class.

Check the Forum at: <http://oslab.cis.cabrillo.edu/forum/> for any tips and updates related to this lab. The forum is also a good place to ask questions if you get stuck or help others.

If you would like some additional assistance come to the CIS Lab on campus where you can get help from instructors and student lab assistants: <http://webhawks.org/~cislab/>.

Procedure

This lab must be done on Opus to get credit

Please log into the Opus server using your personal account. You will need to use the following commands in this lab:

Exercise	cd /usr	cd /usr/bin	man	man -w
Basic	ls	ls -l	man ls	man -w ls
Dir	cd /usr/bin	cd /usr/bin	pwd	pwd
cat	cat /etc/passwd	cat /etc/passwd	cat /etc/passwd	cat /etc/passwd

Only your command history along with the three answers asked for by the submit script will be graded. You must issue each command below (exactly), rather than submitting answers to any questions asked below you must instead issue the correct commands to answer them. Your command history will be scanned to verify each step was completed.

- This lab **MUST** be done on Opus to get credit
- You don't need to turn in answers for steps 1-22. However I will check your command history to verify you entered the correct commands to answer those questions.
- There are three questions to answer on the **submit** script.

Wrap up

New commands:

- | | |
|---------|--|
| apropos | - search for string in whatis database |
| bc | - binary calculator |
| cat | - print file(s) |
| echo | - print text |
| env | - show shell environment variables |
| info | - online documentation with hot links |
| file | - show file information |
| ls | - show directory contents |
| passwd | - change password |
| set | - show (or set) shell variables |
| type | - show command location in path |
| man | - manual page for a command |
| whatis | - command summary |

New Files and Directories:

- | | |
|-------------|--|
| /etc/passwd | - user accounts |
| /etc/shadow | - encrypted passwords |
| /bin | - directory of commands |
| /sbin | - directory of superuser commands |
| /usr/bin | - directory of commands, tools and utilities |
| /usr/sbin | - directory of superuser commands, tools and utilities |

Next Class

Assignment: Check Calendar Page on web site to see what is due next week.

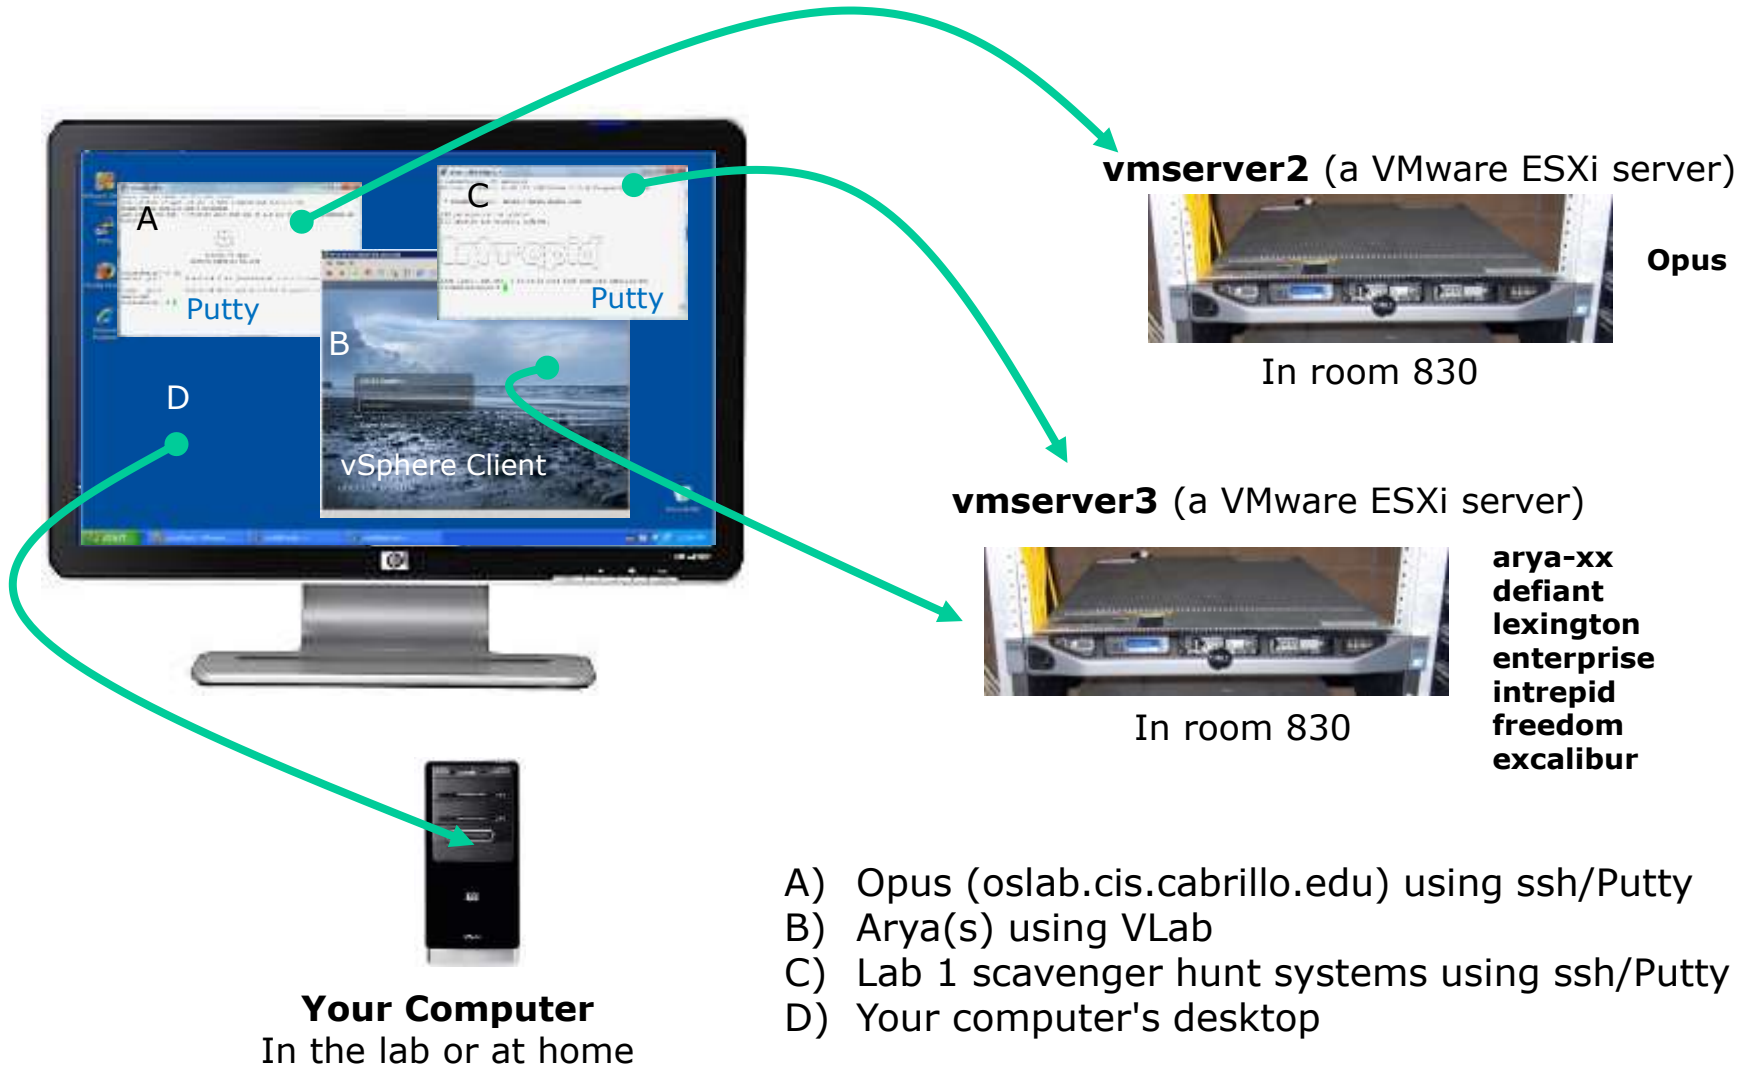

Lab #2

Quiz questions for next class:

- Which four directories typically contain the majority of the UNIX/Linux system commands?
- How do you show your path?
- What command would allow you to view the manual page for the who command?

Backup

Logging into the various CIS 90 systems from home or the lab

Android Terminal App

Viewing kernel version on smartphone

Microsoft RDP App

Running Arya VM in VLab

Terminals

Hardware Terminals

Teletype (TTY)

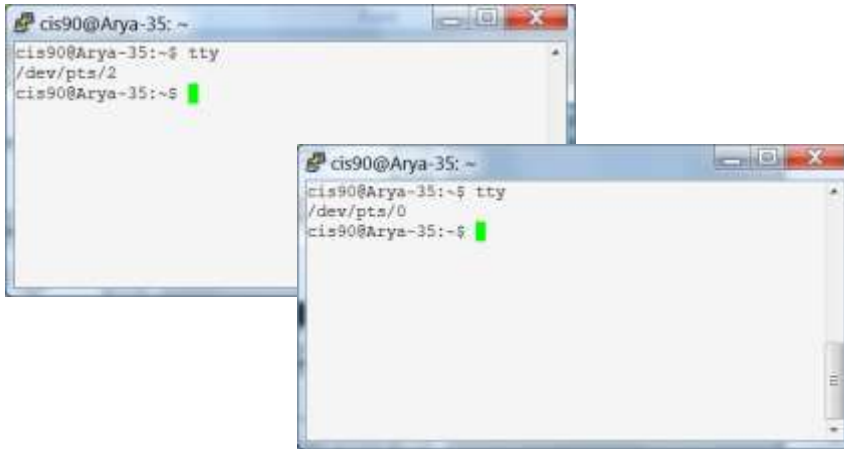

VT100

Terminals were used in the old days to interact with "minicomputers" and "mainframe" computers.

Today we use **terminal emulators** instead that are software programs.

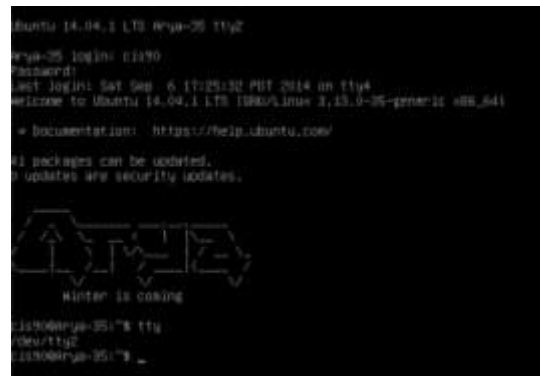

Software Terminals

Terminal emulators like PuTTY (with scroll bars, colors, customizable backgrounds, fonts and sizes) for Windows

Graphical terminals (with scroll bars, colors, customizable backgrounds, fonts and sizes) built into Linux/Mac computers

Virtual terminals
(use ctrl-alt-fn)

Bare bones, no scroll bars,
also called a console

Various terminal devices on an Arya VM

Terminal emulators (e.g. Putty)

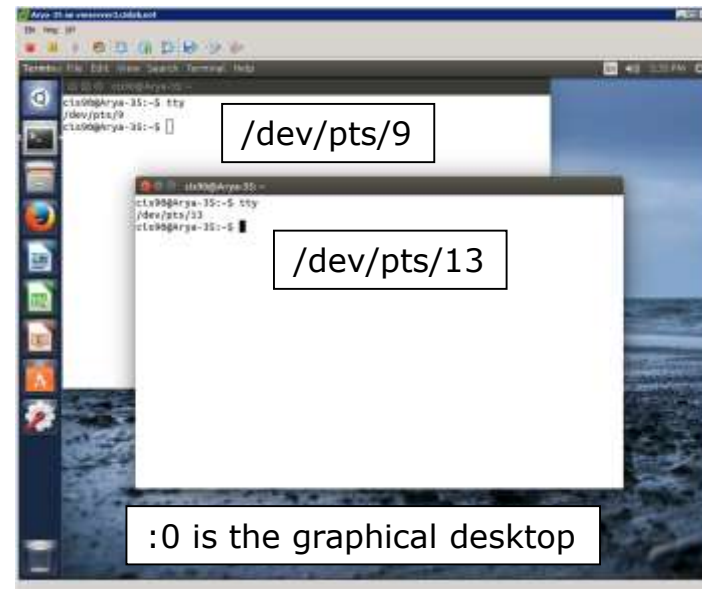

```

cis90@Arya-35:~$ who
cis90  tty4      2014-09-06 17:25
cis90  tty2      2014-09-06 17:25
cis90  pts/2      2014-09-06 17:20 (enterprise.cis.cabrillo.edu)
cis90  :0          2014-09-06 17:20 (:0)
cis90  pts/0      2014-09-06 17:21 (2601:9:6680:53b:4d09:e2b6:e7fc:d999)
cis90  pts/9      2014-09-06 17:22 (:0)
cis90  pts/13     2014-09-06 17:23 (:0)
    
```

*pts=pseudo terminal,
tty=teletype
:n=an X window display number*

Graphical terminals on graphical desktop

Virtual terminals

Putty Tips

(Note: tty = teletype)

The Putty program

The image shows two terminal windows side-by-side. The left window has a black background and shows the output of 'ls /bin' with columns of files. The right window has a white background and shows the same command and output, but with a different color scheme for the files.

```
[rsimms@server0-01 rsimms]$ ls /bin
arch      cut      fgrep    ls      pwd      sync
ash       date    gawk     mail    r       s
ash.static dd      grep     mkdir  r       s
awk       df      gtar     mknod  r       s
basename dmesg   gunzip   mktemp r       s
bash      dnsdomainname gzip     more   r       s
bash2     doexec  hostname mount   r       s
bsh       domainname igawk    mt     s
cat       dumpkeys ipcalc  mv     s
chgrp     echo    kbd_mode netstat s
chmod     ed      kill    nice  s
chown     egrep   link    nisdomainname s
cp        env     ln      pgawk  s
cpio      ex      loadkeys ping   s
csh       false   login   ps     s

[rsimms@server0-01 rsimms]$
```

```
[rsimms@nosmo src]$ ls /bin
alsanmute  dnsdomainname  kbd_mode  nisdomainname  sync
arch       doexec         keyctl    pgawk          tar
ash        domainname    kill      ping          tcsh
ash.static dumpkeys      ksh       ping6         touch
awk        echo          link      ps            tracepath
basename   ed            ln        pwd           tracepath6
bash       egrep        loadkeys  red          traceroute
bsh       env          login     rm            traceroute6
cat        ex           ls        rmdir        true
chgrp     false       mail     rpm          umount
chmod     fgrep       mailx    rvi          uname
chown     gawk        mkdir    rview       unicode_start
cp        gettext     mknod    sed          unicode_stop
cpio      grep        mktemp   setfont     unlink
csh       gtar        more     setserial   usleep
cut       gunzip      mount    sh           vi
date      gzip        mt       sleep       view
dd        hostname    mv       sort        ypdomainname
df        igawk      netstat  stty        zcat
dmesg     ipcalc     nice     su

[rsimms@nosmo src]$
```

*Why does Putty sometimes have a **black background** and sometimes a **white background**?*

Rich's Howtos

Putty

- [Installing PuTTY on Windows](#)
- [Configuring the appearance of PuTTY](#)

VirtualBox

- [Bringing the Eko VM home](#)

There is a Howto on the Resource page to walk you through customizing Putty

The screenshot shows a web browser window with the URL `http://simms-teach.com/howto/106-config-putty.html`. The page content includes:

- Linux Howtos**: Configuring the appearance of PuTTY Fall 2008
- Software used**:
 - PUTTY SSH client (download)
- Step 1 - Run PuTTY and login**: The default appearance is 10 point Courier New font with white text on a black background. The translation is ISO-8859-1 which may garble the " displayed in "Linux User's Manual".
- Terminal Screenshot**: Shows a terminal window with the command `man wsg` and its output:

```
NAME
wsg - control write access to your terminal

SYNOPSIS
wsg [y|n]
```
- Step 2 - Get to Reconfiguration window**

Lesson 1 Review

UNIX/Linux Architecture

Simplified View - Four Major Components

Users

Software

Hardware

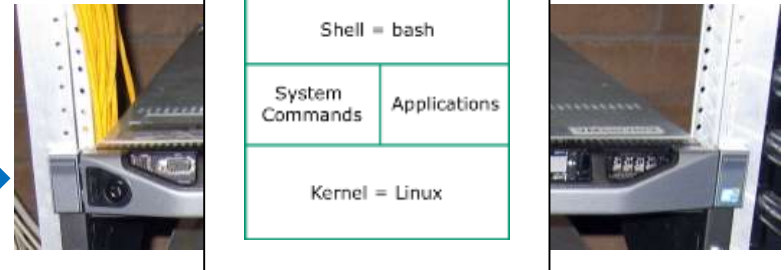

The Lesson 1 commands for your toolbox

cal	<i>Prints calendars</i>
date	<i>Shows the time and date</i>
clear	<i>Clears the screen</i>
exit	<i>Exits login session</i>
history	<i>Shows commands used previously</i>
id	<i>Shows your username and UID (and more)</i>
ps	<i>Shows your processes (including the name of the shell)</i>
ssh	<i>For connecting and logging into a remote computer</i>
hostname	<i>Shows the name of the <u>computer</u> being used</i>
uname	<i>Shows name of the operating system <u>kernel</u></i>
cat /etc/issue	<i>Shows name of the "<u>distro</u>" (distribution)</i>
tty	<i>Shows which terminal device is being used</i>
who	<i>Shows all users who are logged in and from where</i>
who am i	<i>Like who, but only shows your login session</i>

"Name" Terminology

`ssh -p 2220 simben90@oslab.cishawks.net`

Opus AKA `oslab.cishawks.net` AKA `oslab.cis.cabrillo.edu`

Various "names" banded about:

User's first and last **name**: Benji Simms

username = simben90

name of terminal device used = `/dev/pts/2`

(terminal type = xterm)

hostname = `oslab.cishawks.net`

Name of distro = CentOS

Name of shell = bash

Name of kernel = Linux

To view:

`/etc/passwd`

`id`

`tty`

`echo $TERM`

`hostname`

`/etc/issue`

`ps`

`uname`

Terminals types and devices

```
login as: simben90  
simben90@oslab.cabrillo.edu's password:  
Last login: Sat Sep  1 09:26:51 2012 from 50-0-68-  
235.dsl.dynamic.fusionbroadband.com
```

```
      _  
    ('v'  
  //==-\ \  
  (\_=_/)  
  ~~  ~~
```

Hit Enter to accept

```
      Welcome to Opus  
      Serving Cabrillo College
```

```
Terminal type? [xterm]  
Terminal type is xterm.  
/home/cis90/simben $ tty  
/dev/pts/3
```

*The terminal type is **xterm***

*The terminal device for this session is **/dev/pts/3***

The **terminal type** is not the same as the **terminal device**

How can I print a calendar?

```
/home/cis90/simben $ cal
```

```
September 2012
Su Mo Tu We Th Fr Sa
          1
 2  3  4  5  6  7  8
 9 10 11 12 13 14 15
16 17 18 19 20 21 22
23 24 25 26 27 28 29
30
```

*The **cal** command*

```
/home/cis90/simben $ cal 9 2001
```

```
September 2001
Su Mo Tu We Th Fr Sa
          1
 2  3  4  5  6  7  8
 9 10 11 12 13 14 15
16 17 18 19 20 21 22
23 24 25 26 27 28 29
30
```

*Month and year **arguments***

```
/home/cis90/simben $
```

A command can have arguments

What is the current time and date?

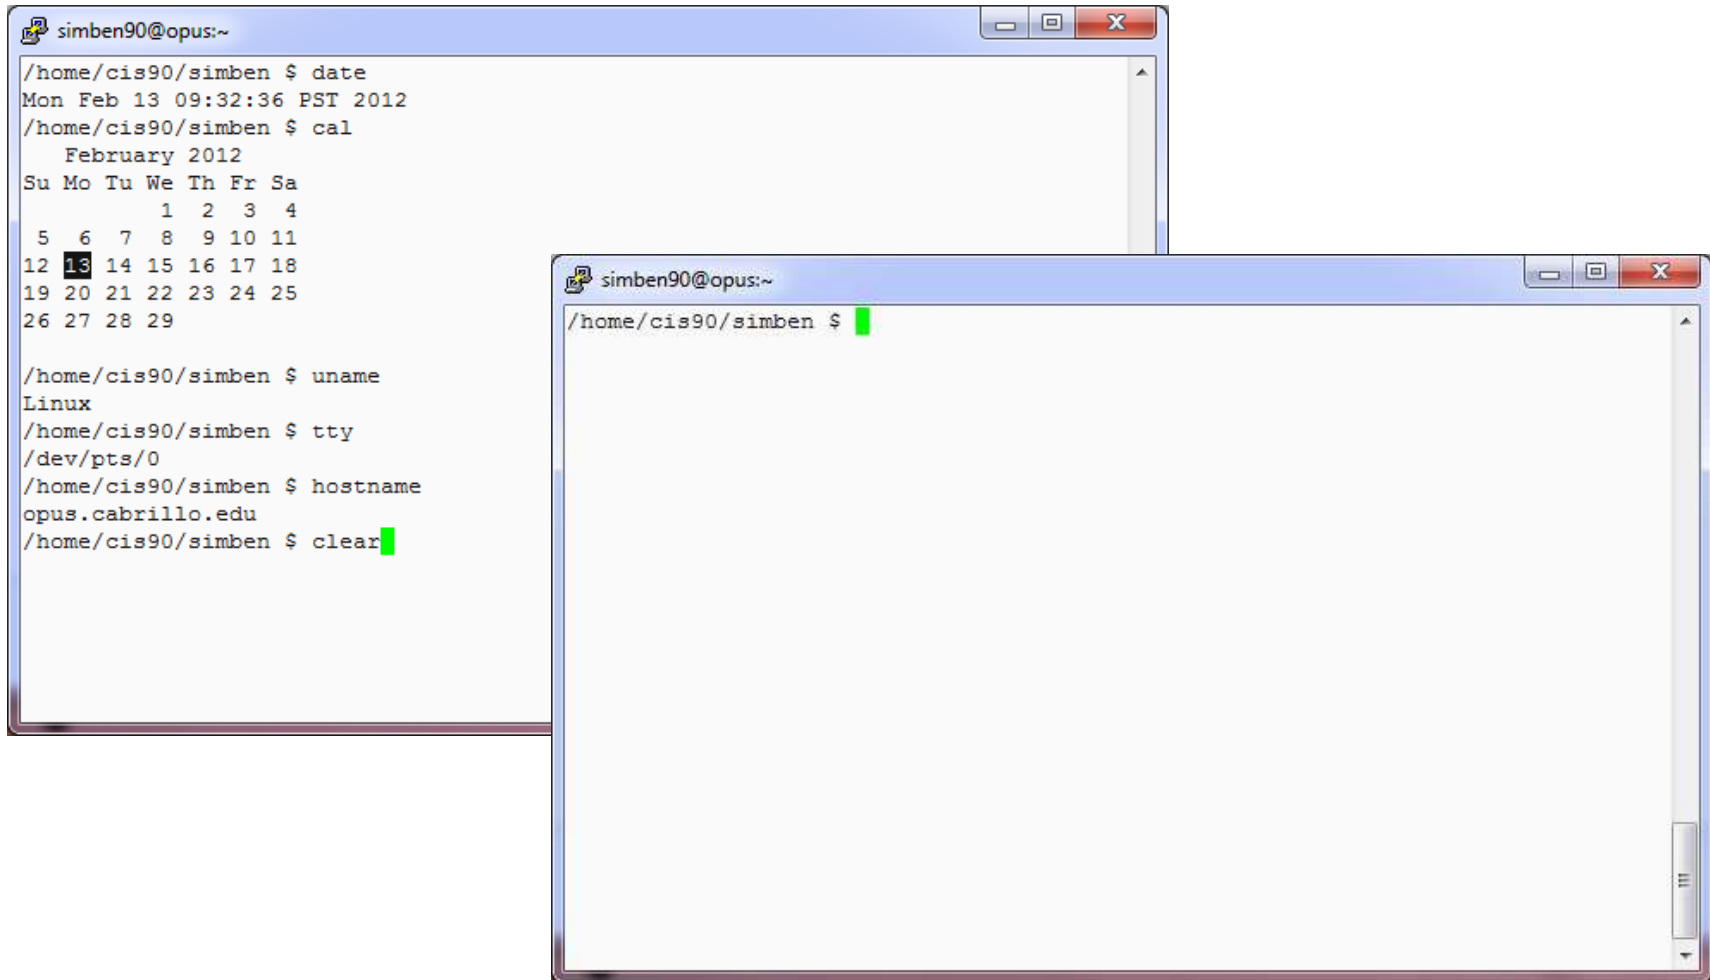

The shell "prompt"

The "command"

```
/home/cis90/simben $ date  
Sat Sep  1 14:03:33 PDT 2012  
/home/cis90/simben $
```

The prompt is output by the shell, you type the command

How do I clear the screen?

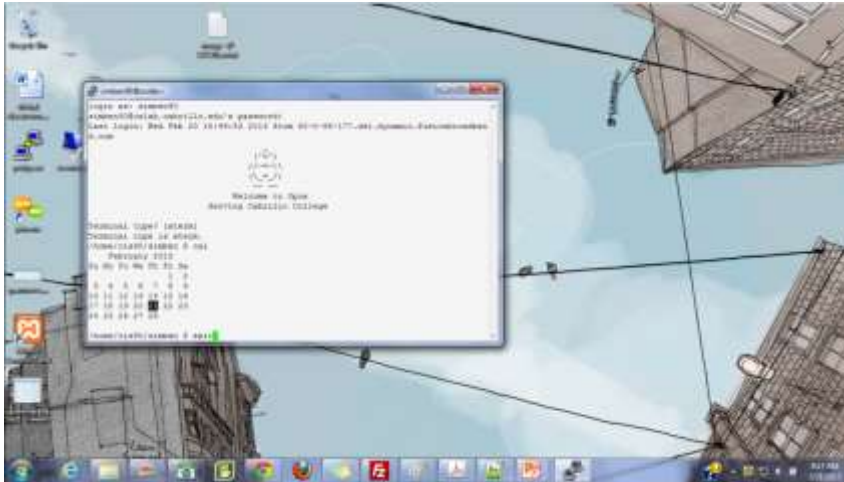

```
simben90@opus:~  
/home/cis90/simben $ date  
Mon Feb 13 09:32:36 PST 2012  
/home/cis90/simben $ cal  
February 2012  
Su Mo Tu We Th Fr Sa  
      1  2  3  4  
 5  6  7  8  9 10 11  
12 13 14 15 16 17 18  
19 20 21 22 23 24 25  
26 27 28 29  
  
/home/cis90/simben $ uname  
Linux  
/home/cis90/simben $ tty  
/dev/pts/0  
/home/cis90/simben $ hostname  
opus.cabrillo.edu  
/home/cis90/simben $ clear
```

```
simben90@opus:~  
/home/cis90/simben $
```

The **clear** command scrolls previous commands out of sight

How do I end this login session?

before **exit**

after **exit**

The **exit** command ends the session and the terminal window disappears ... POOF!

Viewing your command history

```
/home/cis90/simben $ history
```

```
1 hostname  
2 exit  
3 who  
4 who -q  
5 ps -e
```

```
< snipped >
```

```
177 cal 9 2001  
178 exit  
179 who  
180 cal  
181 tty  
182 uname  
183 ps  
184 id  
185 exit  
186 history
```

```
/home/cis90/simben $
```

*The **history** command outputs the commands used previously ... even from previous login sessions*

Tip: Use the "Up Arrow" key to quickly re-issue a previous command!

What is the UID (User ID) for my account or other accounts?

```
/home/cis90/simben $ id
uid=1001(simben90) gid=190(cis90) groups=190(cis90),100(users)
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023
```

```
/home/cis90/simben $ id milhom90
uid=1002(milhom90) gid=190(cis90) groups=190(cis90),100(users)
```

```
/home/cis90/simben $ id simben90
uid=1001(simben90) gid=190(cis90) groups=190(cis90),100(users)
```

We are all just numbers to the Linux kernel

What shell am I using?

```

/home/cis90/simben $ ps
  PID TTY          TIME CMD
 28994 pts/0    00:00:00 bash
 29093 pts/0    00:00:00 ps
  
```

Process ID numbers →

Terminal device being used →

*the shell is sleeping and waiting for **ps** command to finish* →

***ps** command is running as it outputs this* →

The **ps** command outputs the current processes you own including the shell program you are using

How do I log into another computer system?

Method 1: The **ssh** command using a hostname

username on remote computer → *Hostname of remote computer* →

```

/home/cis90/simben $ ssh cis90@p06-arwen
cis90@p06-arwen's password:
Welcome to Linux Mint 15 Olivia (GNU/Linux 3.8.0-26-generic x86_64)

Welcome to Linux Mint
* Documentation: http://www.linuxmint.com
Last login: Sun Sep  8 09:52:00 2013
cis90@p06-arwen:~ >

```

Notice how the prompt changes on the remote computer →

*Note: You can also **ssh** into the same computer you are currently using for an additional session.*

How do I log into another computer system?

Method 1: The **ssh** command using an IP address

username on remote computer

IP address of remote computer

```
/home/cis90/simben $ ssh cis90@172.20.4.34
cis90@172.20.4.34's password:
Welcome to Ubuntu 12.04.1 LTS (GNU/Linux 3.2.0-29-generic x86_64)
```

*Notice how
the prompt
changes on
the remote
computer*

```
* Documentation: https://help.ubuntu.com/
361 packages can be updated.
109 updates are security updates.

Last login: Wed Feb 20 17:26:25 2013 from oslab.cabrillo.edu
cis90@frodo-108:~$
```

What is the name of the computer I'm interacting with?

```
/home/cis90/simben $ hostname
oslab.cishawks.net
```

We still refer to Opus as "Opus" in this class however it's official hostname on the Internet is "oslab". This may change in the future after some network changes are made.

Opus is a member of two overlapping Internet domains:

- The **cis.cabrillo.edu** domain is a sub-domain of the college's domain.
- The **cishawks.net** domain is an alternate domain put in place to alleviate some DNS issues experienced during the CIS Lab move to building 800.

What kernel am I running on?

```
/home/cis90/simben $ uname  
Linux
```

The **uname** command (with no arguments) outputs the name of the operating system kernel

What "distro" has been installed?

```
/home/cis90/simben $ cat /etc/issue
CentOS release 6.2 (Final)
Kernel \r on \l
```

```
/home/cis90/simben $ cat /etc/*-release
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
```

Catting out these files *usually* will show the distro name

What terminal device am I using?

```
/home/cis90/simben $ tty  
/dev/pts/5
```

The **terminal type** is not the same as the **terminal device**

Who else is logged in and from where?

```

/home/cis90/simben $ who
simben90 pts/0      2013-02-21 08:17 (50-0-68-28.dsl.dynamic.fusion.com)

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $
```

Answer: xterm

We have the answer already!

What is the hostname of the computer I'm using?

```
/home/cis90/simben $
```

What is the hostname of the computer I'm using?

```
/home/cis90/simben $  
/home/cis90/simben $ hostname  
oslab.cabrillo.edu  
/home/cis90/simben $
```

Answer: oslab.cabrillo.edu

*Use the **hostname**
command to find out*

What is the name of the OS (operating System) kernel?

```
/home/cis90/simben $
```

What is the name of the OS (operating System) kernel?

```
/home/cis90/simben $  
/home/cis90/simben $ uname  
Linux  
/home/cis90/simben $
```

*Use the **uname**
command to find out*

Answer: Linux

What is the name of the Linux Distribution being run?

```
/home/cis90/simben $
```

What is the name of the Linux Distribution being run?

```
/home/cis90/simben $ cat /etc/issue
```

```
CentOS release 6.2 (Final)
```

```
Kernel \r on \l
```

```
/home/cis90/simben $ cat /etc/*-release
```

```
CentOS release 6.2 (Final)
```

```
CentOS release 6.2 (Final)
```

```
CentOS release 6.2 (Final)
```

```
/home/cis90/simben $
```

Answer: CentOS

*Use either **cat /etc/issue** or **cat /etc/*-release** to find out*

What is my username and uid (user ID number)?

```
/home/cis90/simben $
```

What is my username and uid (user ID number)?

```
/home/cis90/simben $  
/home/cis90/simben $ id  
uid=1001(simben90) gid=190(cis90)  
groups=190(cis90),100(users)  
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023  
/home/cis90/simben $
```

Answer: username=simben90 and the uid=1001

*Use the **id** command
to find out*

What is the name of the shell I'm using?

```
/home/cis90/simben $
```

What is the name of the shell I'm using?

```
/home/cis90/simben $  
/home/cis90/simben $ ps  
  PID TTY          TIME CMD  
28237 pts/0    00:00:00 bash  
28752 pts/0    00:00:00 ps  
/home/cis90/simben $
```

Answer: bash

*Use the **ps** command to find out.*

We will soon learn another command for doing this.
