CIS 90 Introduction to UNIX/Linux

The Command Line

Student Learner Outcomes

1. Navigate and manage the UNIX/Linux file system by viewing, copying, moving, renaming, creating, and removing files and directories.
2. Use the UNIX features of file redirection and pipelines to control the flow of data to and from various commands.
3. With the aid of online manual pages, execute UNIX system commands from either a keyboard or a shell script using correct command syntax.

Introductions and Credits

Jim Griffin

- Created this Linux course
- Created Opus and the CIS VLab
- Jim’s site: http://cabrillo.edu/~jgriffin/

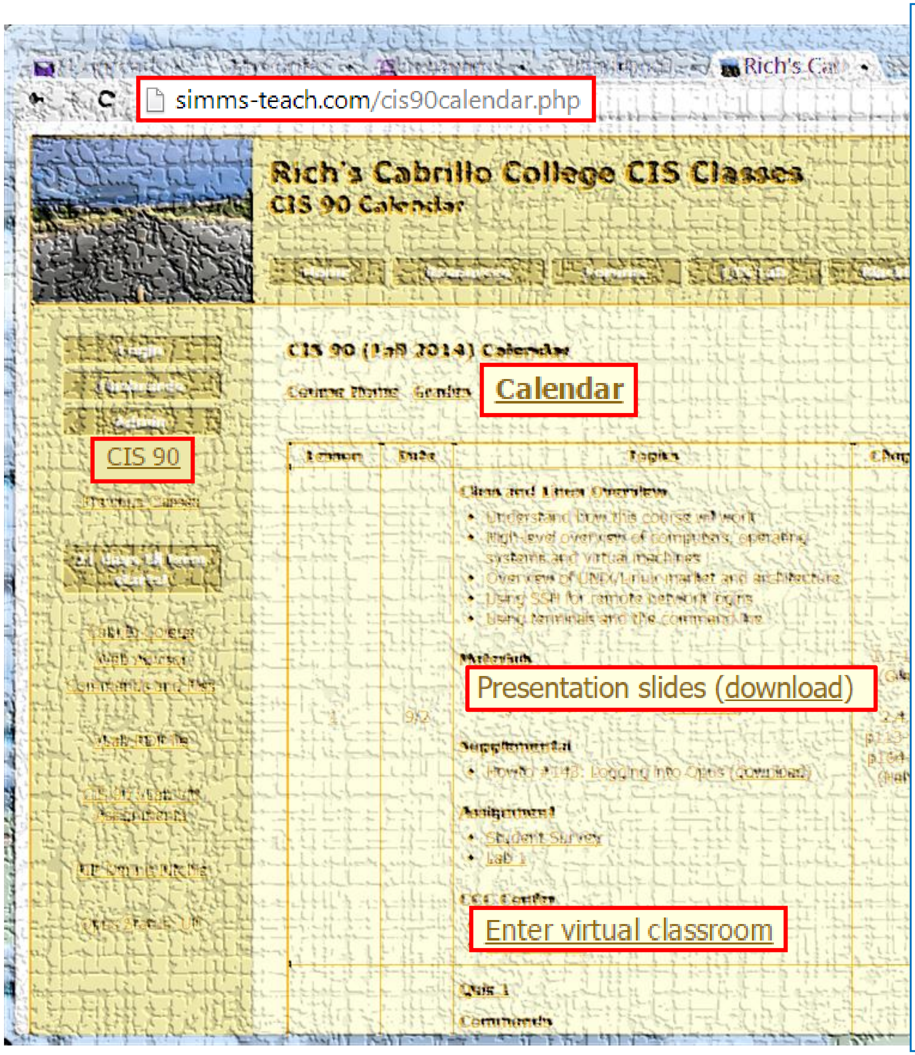
Rich Simms

- HP Alumnus
- Started teaching this course in 2008 when Jim went on sabbatical
- Rich’s site: http://simms-teach.com

And thanks to:

- John Govsky for many teaching best practices: e.g. the First Minute quizzes, the online forum, and the point grading system (http://teacherjohn.com/)

Student checklist for attending class



1. Browse to: **http://simms-teach.com**
2. Click the **CIS 90** link.
3. Click the **Calendar** link.
4. Locate today's lesson.
5. Find the **Presentation slides** for the lesson and **download** for easier viewing.
6. Click the **Enter virtual classroom** link to join CCC Confer*
7. Log into Opus with Putty or ssh command.

* First time online students should use: http://www.cccconfer.org/support/Readiness to verify their computer is ready for CCC Confer.

Note: Blackboard Collaborate Launcher only needs to be installed once. It has already been downloaded and installed on the classroom PC's.

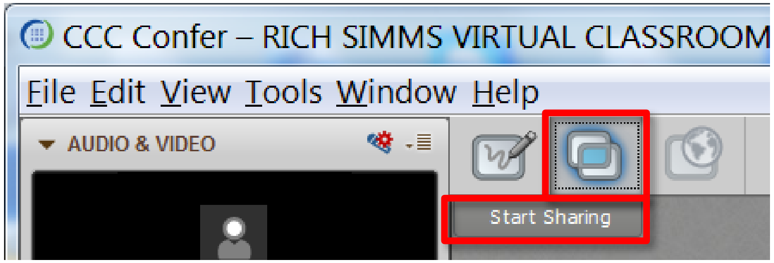
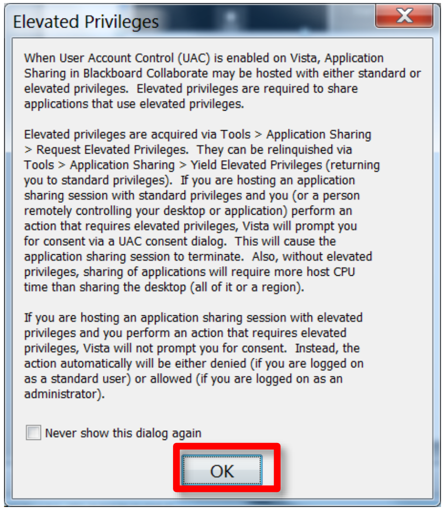
Student checklist for sharing desktop with classmates

1) Instructor gives you sharing privileges



CCC Confer – RICH SIMMS VIRTUAL CLASSROOM
File Edit View Tools Window Help
AUDIO & VIDEO
Start Sharing

2) Click overlapping rectangles icon. If white "Start Sharing" text is present then click it as well.



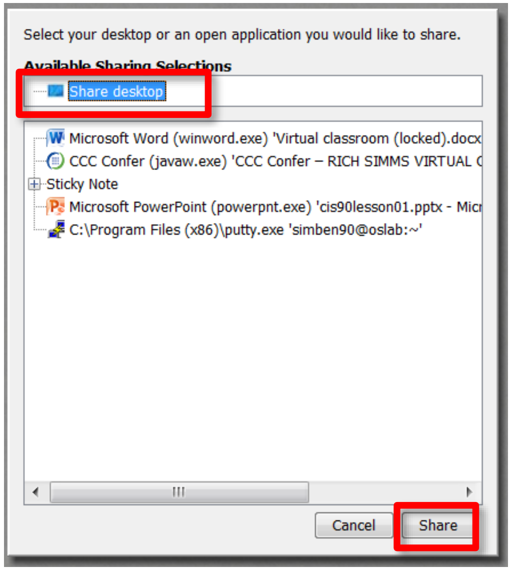
When User Account Control (UAC) is enabled on Vista, Application Sharing in Blackboard Collaborate may be hosted with either standard or elevated privileges. Elevated privileges are required to share applications that use elevated privileges.

Elevated privileges are acquired via Tools > Application Sharing > Request Elevated Privileges. They can be relinquished via Tools > Application Sharing > Yield Elevated Privileges (returning you to standard privileges). If you are hosting an application sharing session with standard privileges and you (or a person remotely controlling your desktop or application) perform an action that requires elevated privileges, Vista will prompt you for consent via a UAC consent dialog. This will cause the application sharing session to terminate. Also, without elevated privileges, sharing of applications will require more host CPU time than sharing the desktop (all of it or a region).

If you are hosting an application sharing session with elevated privileges and you perform an action that requires elevated privileges, Vista will not prompt you for consent. Instead, the action automatically will be either denied (if you are logged on as a standard user) or allowed (if you are logged on as an administrator).

□ Never show this dialog again

3) Click OK button.



Select your desktop or an open application you would like to share.

Available Sharing Selections

Share desktop

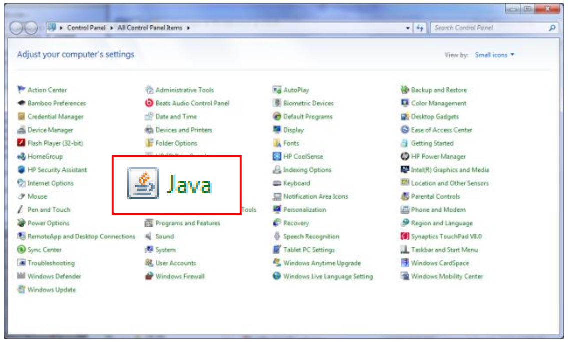
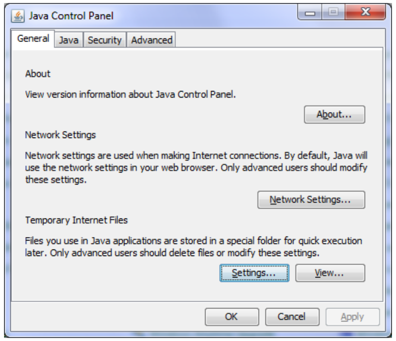
Rich's CCC Confer checklist - universal fixes

Universal Fix for CCC Confer:
1) Shrink (500 MB) and delete Java cache
2) Uninstall and reinstall the latest Java runtime
3) https://www.cccconfer.org/Support

Control Panel (small icons)



General Tab > Settings...



About

View version information about Java Control Panel.

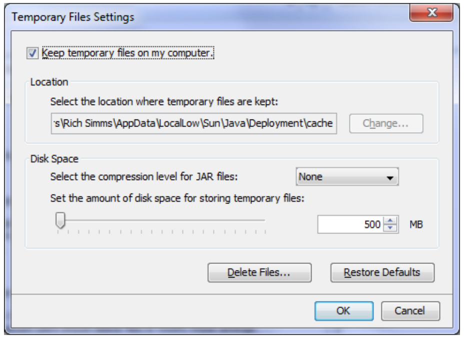
Network Settings

Network settings are used when making Internet connections. By default, Java will use the network settings in your web browser. Only advanced users should modify these settings.

Temporary Internet Files

Files you use in Java applications are stored in a special folder for quick execution later. Only advanced users should delete files or modify these settings.

500MB cache size



☑ Keep temporary files on my computer.

Location

Select the location where temporary files are kept:

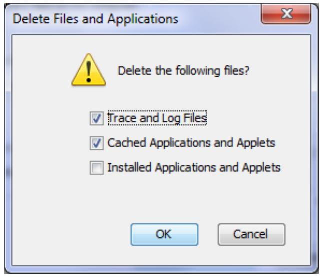
s\Rich Simms\AppData\LocalLow\Sun\Java\Deployment\cache

Disk Space

Select the compression level for JAR files: None

Set the amount of disk space for storing temporary files: 500 MB

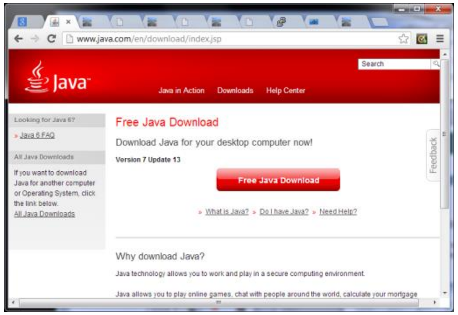
Delete these



Delete the following files?

☑ Trace and Log Files
☑ Cached Applications and Applets
□ Installed Applications and Applets

Google Java download



If you want to download Java for another computer or Operating System, click the link below.
All Java Downloads

Free Java Download

Download Java for your desktop computer now!

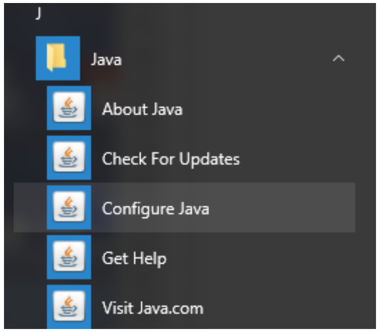
Version 7 Update 13

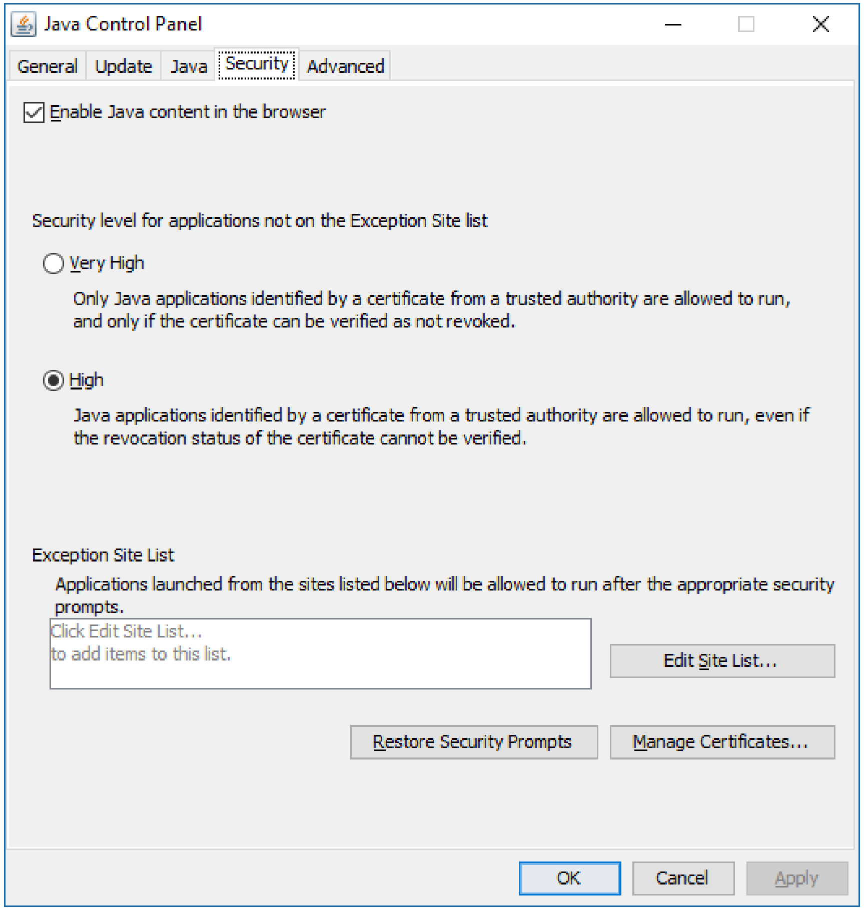
Why download Java?

Java technology allows you to work and play in a secure computing environment.

Java allows you to play online games, chat with people around the world, calculate your mortgage

Rich's CCC Confer checklist - digital certificate work around





☑ Enable Java content in the browser

Security level for applications not on the Exception Site list

○ Very High

Only Java applications identified by a certificate from a trusted authority are allowed to run, and only if the certificate can be verified as not revoked.

● High

Java applications identified by a certificate from a trusted authority are allowed to run, even if the revocation status of the certificate cannot be verified.

Exception Site List

Applications launched from the sites listed below will be allowed to run after the appropriate security prompts.

Click Edit Site List...
to add items to this list.

1. Open the Java Control Panel
2. Select the **Security** tab
3. Select **Edit Site List...**
4. Select **Add**
5. Click into the white box next to the red exclamation mark and type **https://na-downloads.elluminate.com**
6. Press OK
7. Press **Continue** on the pop-up message
8. Press OK
9. Access your session or recording once more

Start

Sound Check

*Students that dial-in should mute their line using *6 to prevent unintended noises distracting the web conference.*

*Instructor can use *96 to mute all student lines.*

Volume
**4 - increase conference volume.*
**7 - decrease conference volume.*
**5 - increase your voice volume.*
**8 - decrease your voice volume.*

First Minute Quiz

Please answer these questions **in the order** shown:

Use CCC Confer White Board

email answers to: risimms@cabrillo.edu

(answers must be emailed within the first few minutes of class for credit)

Commands

Objectives

- Understand where account information is kept.
- Understand why strong passwords are important.
- Learn where commands are located.
- Understand how the shell works to run commands.
- Discover where to find documentation.

Agenda

- Quiz
- Questions
- Using VLab
- Virtual terminals
- Logging in
- Passwords
- Housekeeping
- Lesson 2 commands
- The path
- Location of common commands
- Programs
- Inputs to commands
- Command syntax
- Parsing
- Variables
- The shell (six steps)
- Metacharacters
- Shortcuts
- Life without a path
- Docs
- Wrap up

Class Activity

LinkedIn
Computer Science and
Computer Information Systems at Cabrillo College

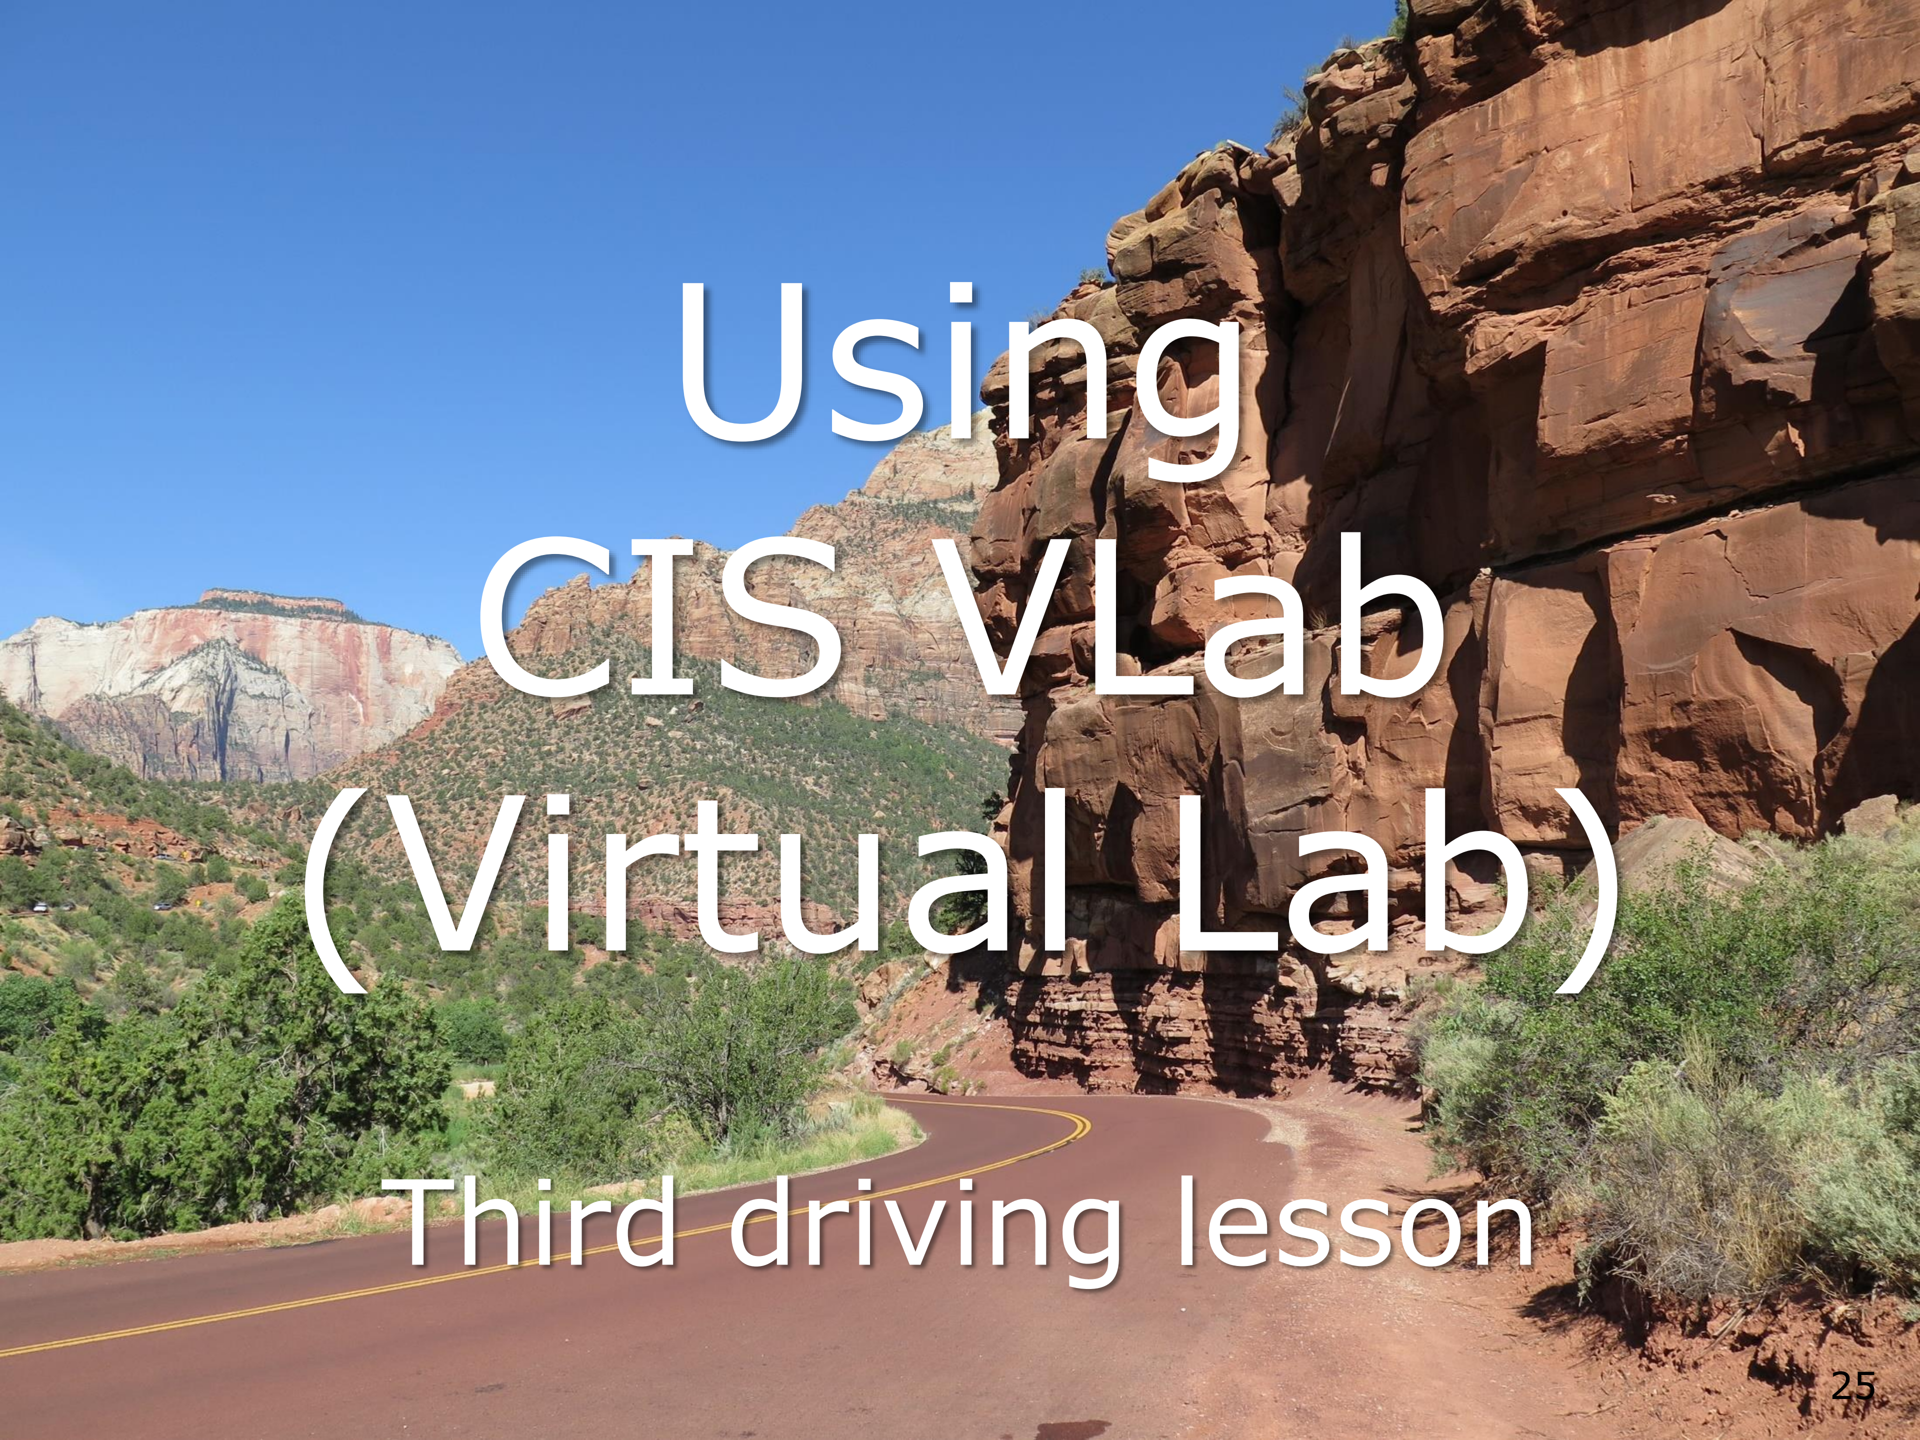
For 3 points extra credit:

1) Join LinkedIn.com
2) Join this group
3) Send me an email when finished.

https://www.linkedin.com/groups/6689142

http://simms-teach.com/cis90extracredit.php

- **Web site content review** - The first person to email the instructor pointing out an error or typo on this website will get one point of extra credit for each unique error. The email must specify the specific document or web page, pinpoint the location of the error, and specify what the correction should be. Duplicate errors count as a single point. This does not apply to pre-published material than has been uploaded but not yet presented in class. (Up to 20 points total)



Using CIS VLab (Virtual Lab)

Third driving lesson

Command Line vs Graphical Desktop

Access the UNIX/Linux systems using:

ssh when:

- You just need a command line
- Have a low or high speed network connection
- Note: Windows users can use Putty

VLab when:

- You want a graphical desktop
- You want to use virtual terminals (the very basic black consoles)
- Note: High speed network connection is needed
- Note: Mac users can use CoRD
- Note: you may need a fix applied to your VM if you experience the dreaded "unintended repeating key" issue

VLab = using the VMware vSphere Client via a Remote Desktop (RDP) connection

Accessing CIS VLab VMs

Getting Started | Summary | Resource Allocation | Performance | Tasks & Events | Alarms | Console | Permissions | M

What is a Virtual Machine?

A virtual machine is a software computer that, like a physical computer, runs an operating system and applications. An operating system installed on a virtual machine is called a guest operating system.

Because every virtual machine is an isolated computing environment, you can use virtual machines as desktop or workstation environments, as testing environments, or to consolidate server applications.

In vCenter Server, virtual machines run on hosts or clusters. The same host can run many virtual machines.

Cluster

Virtu

Ctrl-🪟-Alt, Space, F4
(for tty4)

*On some PC keyboards it is not necessary to use the 🪟 key

Note: This is for vSphere only. The 🪟 key and Space bar are not pressed for physical (non-VM) servers

Changing Virtual Terminals on VMware Linux VMs

VMware operations	
On PC Keyboard:	While holding down the Ctrl-⊞-Alt keys, tap spacebar then tap f1, f2, ... or f7.
On Mac keyboard:	Hold down Control and Option keys, tap the spacebar, hold down fn key (in addition to Control and Option keys) and tap f1, f2, ... or f7.

Pressing the ⊞ on some Windows keyboards may not be necessary

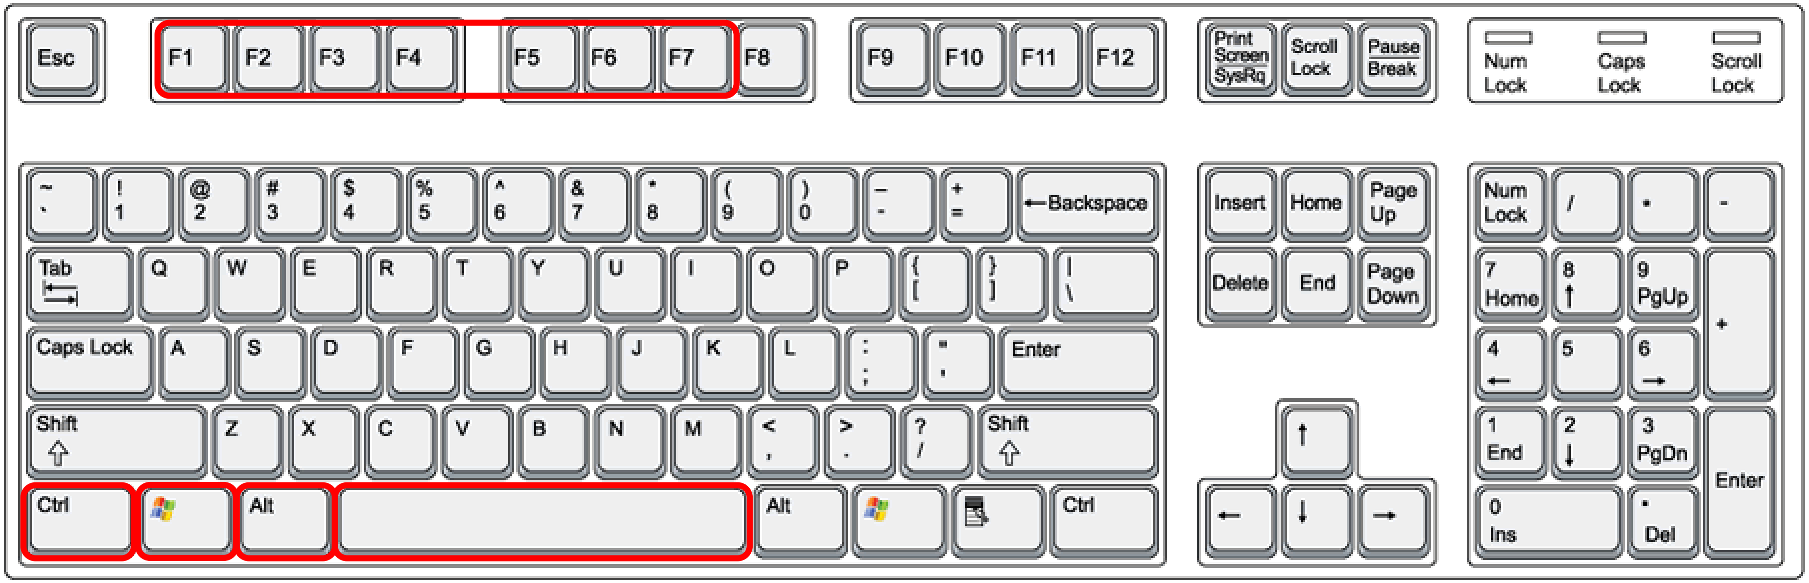
F7 is graphics mode for the Ubuntu VMs.

The Centos VMs do not have a graphics mode components installed (run level 3 only)

Note: the spacebar does not need to be tapped on a physical (non-VM) system. This is only required when changing virtual terminals on VMware VMs.

VMware VM Operations

Changing Virtual Terminals with a PC keyboard

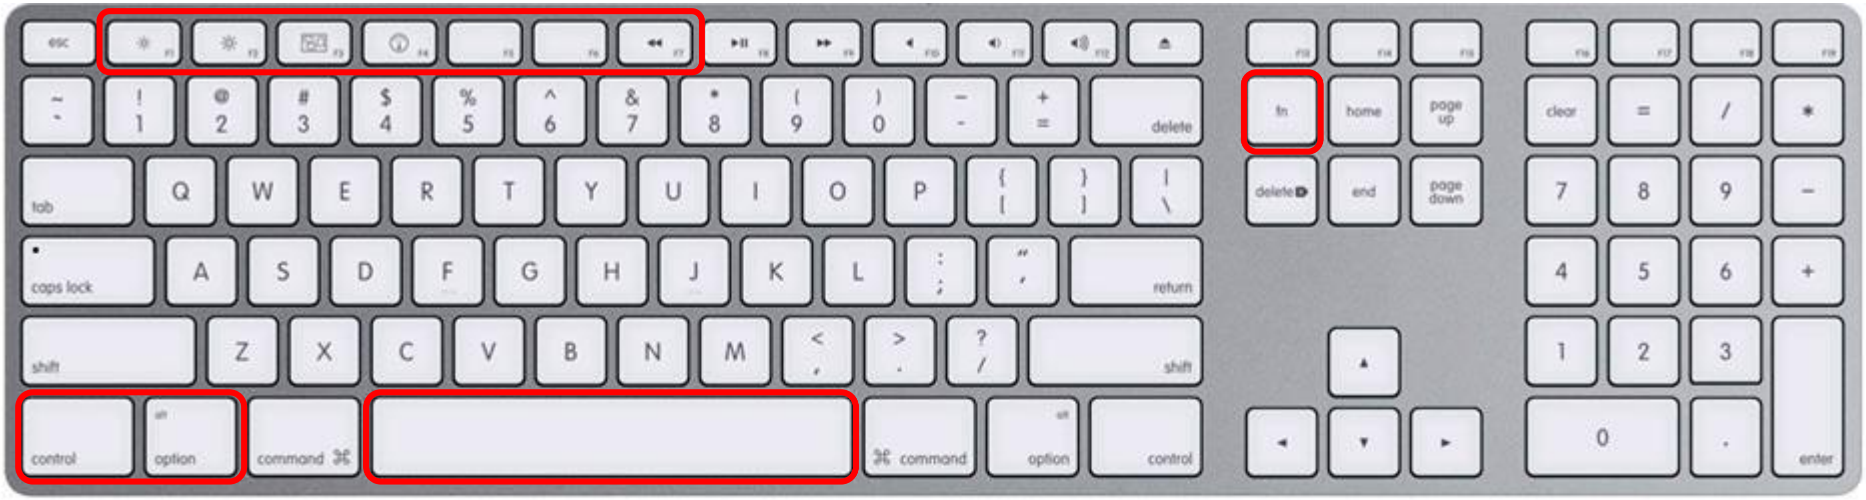


On PC keyboard:

While holding down the **Ctrl-⊞-Alt** keys,
tap **Spacebar** then tap **F***n* key
(where *n*=1-7 to specify a function key)

VMware VM Operations

Changing Virtual Terminals with a Mac keyboard



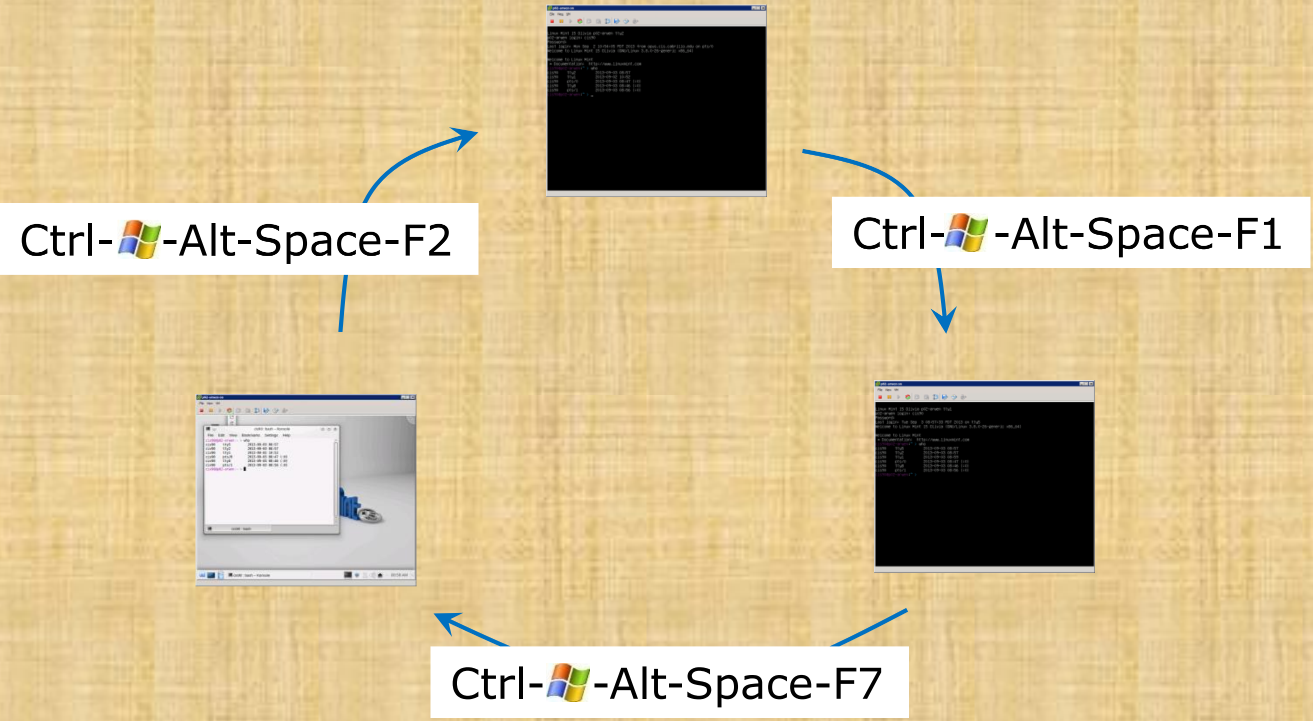
On Mac keyboard:

While holding down the **control-option** keys

tap **Spacebar** then tap **fn-F***n* keys

(where *n*=1-7 to specify a function key)

Class Activity



Ctrl-⊞-Alt-Space-F1

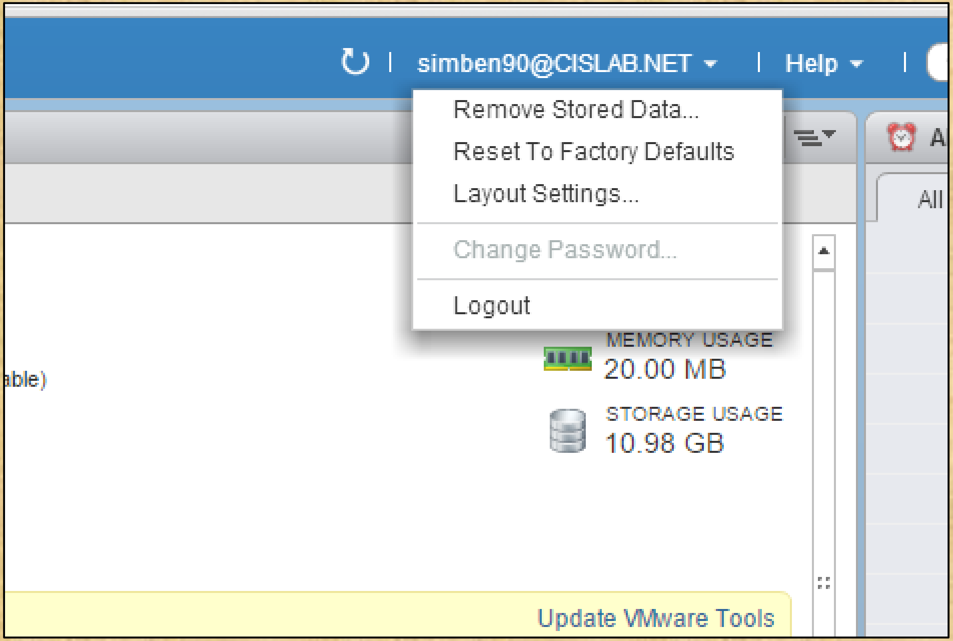
Ctrl-⊞-Alt-Space-F7

Ctrl-⊞-Alt-Space-F2

Follow the instructor to:

- Try changing between the graphical desktop and the TTYs
- Login as cis90 on tty1 and tty2
- Run a terminal on the graphical desktop
- Use the who command to see how many logins there are

Class Activity



Logout of Vlab's vCenter

Your VM will keep running even though you disconnect from vCenter

Logging In

(authentication)

Who goes there?

What's the password?

http://www.gutenberg.org/files/15064/15064-h/images/269.png

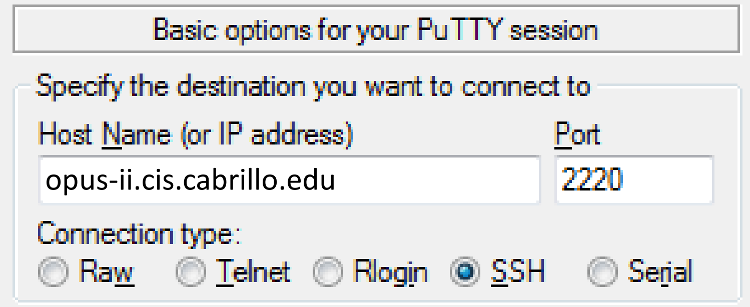
Logging in

- A system administrator can create user accounts for each user that is allowed to login
- To login you must be authenticated as one of those users
- There are two common authentication methods used:
  1) Username and password
  2) Public & private keys

We will cover just usernames and passwords today

Logging in

Logging in using Putty from Windows PCs



Basic options for your PuTTY session

Specify the destination you want to connect to

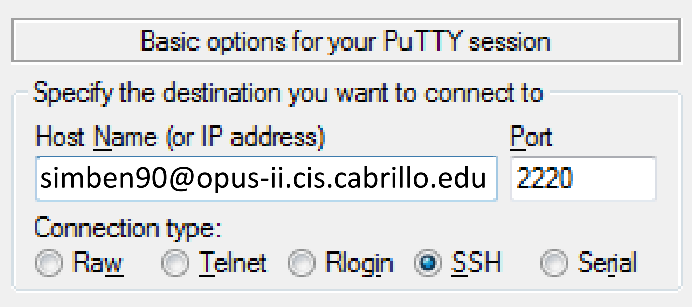
Host Name (or IP address): opus-ii.cis.cabrillo.edu

Port: 2220

Connection type:
○ Raw ○ Telnet ○ Rlogin ● SSH ○ Serial

If you don't specify your username the system will prompt you for both your username and password

```
login as: simben90
simben90@opus-ii.cis.cabrillo.edu's password:
```



Basic options for your PuTTY session

Specify the destination you want to connect to

Host Name (or IP address): simben90@opus-ii.cis.cabrillo.edu

Port: 2220

Connection type:
○ Raw ○ Telnet ○ Rlogin ● SSH ○ Serial

If you specify your username the system will just prompt you for your password

```
Using username "simben90".
simben90@opus-ii.cis.cabrillo.edu's password:
```

Logging in with the ssh command from Mac or UNIX/Linux systems

```
ssh -p 2220 simben90@opus-ii.cis.cabrillo.edu
```

If you don't specify a username the ssh command will use your current username. Be careful, that username may not exist on the remote system you are trying to login to.

```
[rsimms@daughter-of-opus ~]$ ssh -p 2220 simben90@opus-ii.cis.cabrillo.edu
simben90@opus-ii.cis.cabrillo.edu's password:
```

Logging in

Logging in on a virtual terminal

pts/8

Let's login to an Arya using a virtual terminal, a graphical desktop, two ssh sessions and a graphical terminal on the graphical desktop

Logging in

- For systems that are not connected to a directory service (e.g. Microsoft Active Directory) all user accounts are kept in a file named **/etc/passwd**

- For systems that are not connected to a directory service all passwords are kept encrypted in a file named **/etc/shadow**

The /etc/passwd file

The SUPER user is named root

```
[rsimms@daughter-of-opus ~]$ cat /etc/passwd
root:x:0:0:root:/root:/bin/bash
```

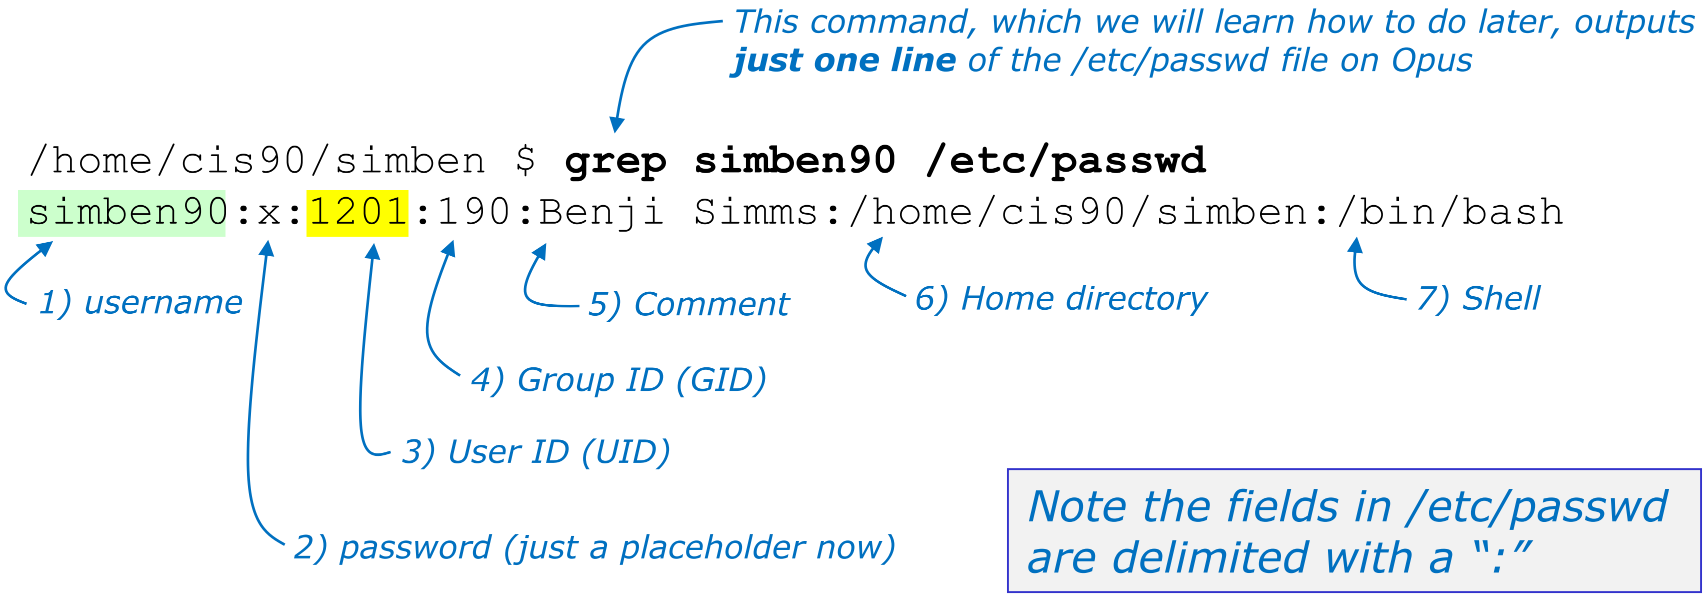
Snipped

```
deanna:x:2009:1701:Deanna Troi:/home/deanna:/bin/bash
chakotay:x:2010:1701:Chakotay:/home/chakotay:/bin/bash
kira:x:2011:1701:Kira Nerys:/home/kira:/bin/bash
chekov:x:2012:1701:Pavel Chekov:/home/chekov:/bin/bash
[rsimms@daughter-of-opus ~]$
```

To login your username must match one of the accounts in the */etc/passwd file*

Note: this file no longer contains the passwords!

Viewing your account in /etc/passwd



This command, which we will learn how to do later, outputs ***just one line*** *of the /etc/passwd file on Opus*

```
/home/cis90/simben $ grep simben90 /etc/passwd
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

1) username

2) password (just a placeholder now)

3) User ID (UID)

4) Group ID (GID)

5) Comment

6) Home directory

7) Shell

Note the fields in /etc/passwd are delimited with a ":"

```
/home/cis90/simben $ id
uid=1201(simben90) gid=190(cis90) groups=190(cis90),100(users)
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023
```

Now you know where the ***id*** *command get some of its information!*

The /etc/shadow file

The SUPER user is named root

```
[rsimms@daughter-of-opus ~]$ cat /etc/shadow
cat: /etc/shadow: Permission denied
[rsimms@daughter-of-opus ~]$ sudo cat /etc/shadow
[sudo] password for rsimms:
root:$6$[redacted]$[redacted]
:16226:0:99999:7:::
```

Use sudo to run command as superuser (root)

Snipped

```
deanna:$6$hsAXq0Jk$ndIt.oxiFL/qZ7pLAFOaGgxpxAHDEj7ukpd0PfeRN0J9q07Z6Cg0V
3hzo9eSAk0GlaywDtqwL5NefNEEwf9FR1:16686:0:99999:7:::
chakotay:$6$c/kFViIa$nTUJcvJRCut8PwvOSYLlopAI25UsFLNKerGF8OhQIkI78RHTXE1

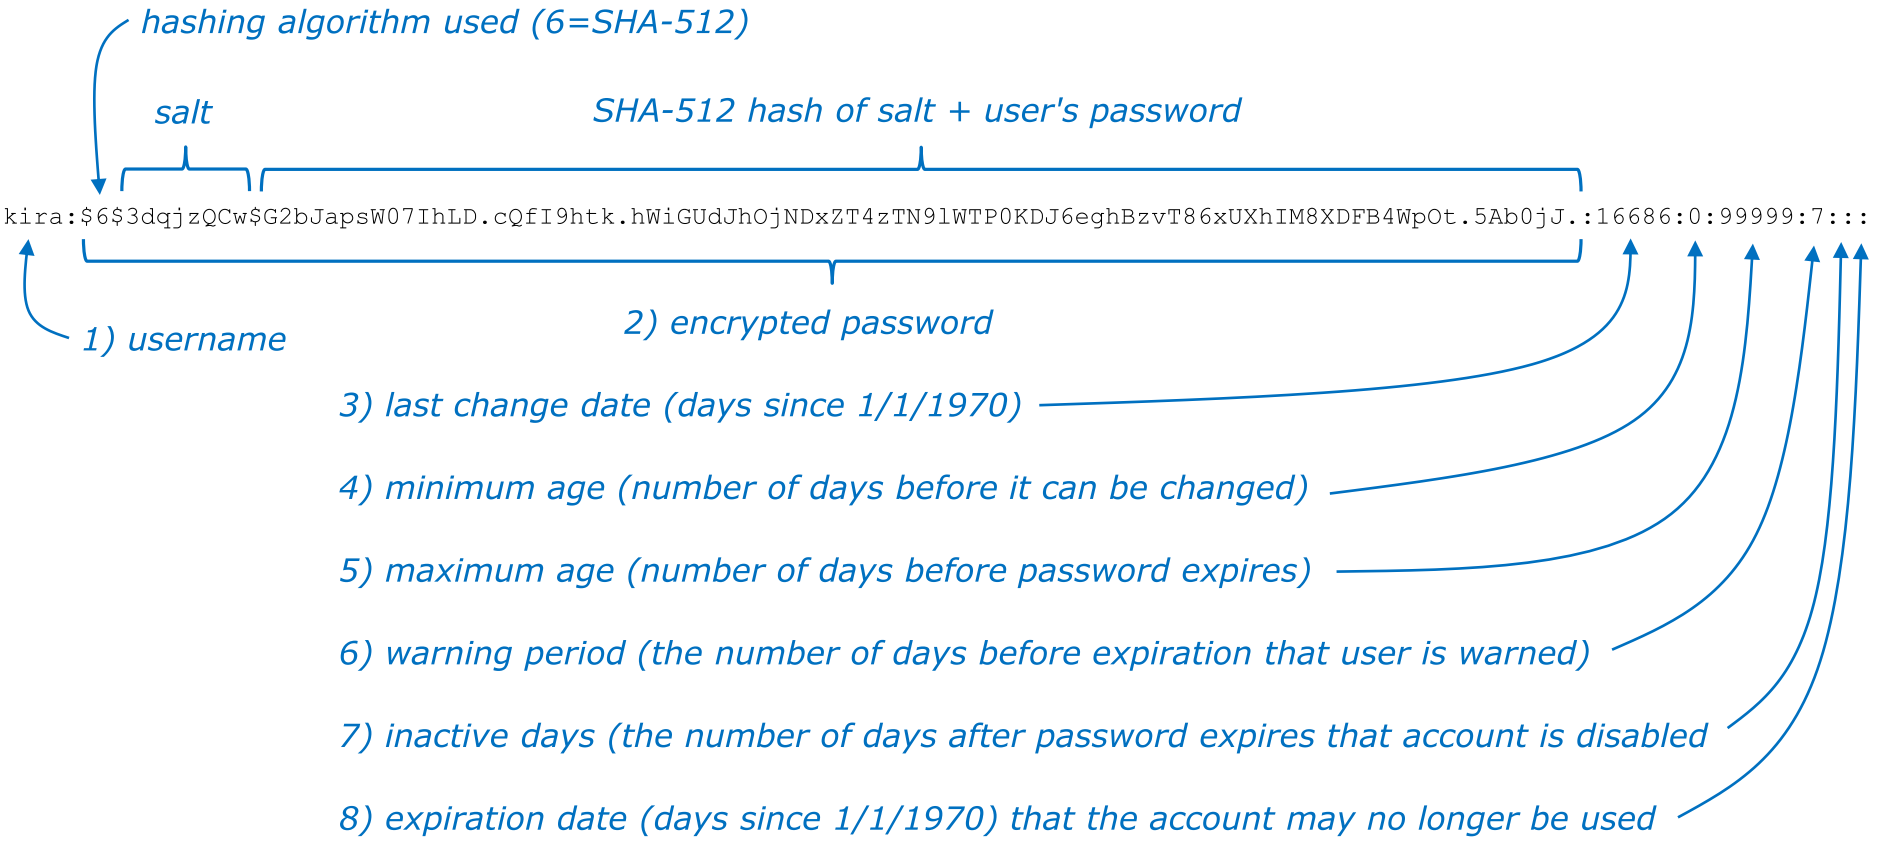
chekov:$6$jd4PMdv0$HPyW/k04DjMDeLO3qUfEzvQj0fWpLuUWMh9RvlOv1V3N/zQxhdhS3
YfSLdhHz0rKBe1wzGGx07CrzOfL3MKNa1:16686:0:99999:7:::
[rsimms@daughter-of-opus ~]$
```

To login, your password must match the encrypted account password kept in the */etc/shadow* file

Only the root user can view this file and the passwords are encrypted!

The /etc/shadow file



hashing algorithm used (6=SHA-512)

salt

SHA-512 hash of salt + user's password

```
kira:$6$3dqjzQCw$G2bJapsW07IhLD.cQfI9htk.hWiGUdJhOjNDxZT4zTN9lWTP0KDJ6eghBzvT86xUXhIM8XDFB4WpOt.5Ab0jJ.:16686:0:99999:7:::
```

1) username

2) encrypted password

3) last change date (days since 1/1/1970)

4) minimum age (number of days before it can be changed)

5) maximum age (number of days before password expires)

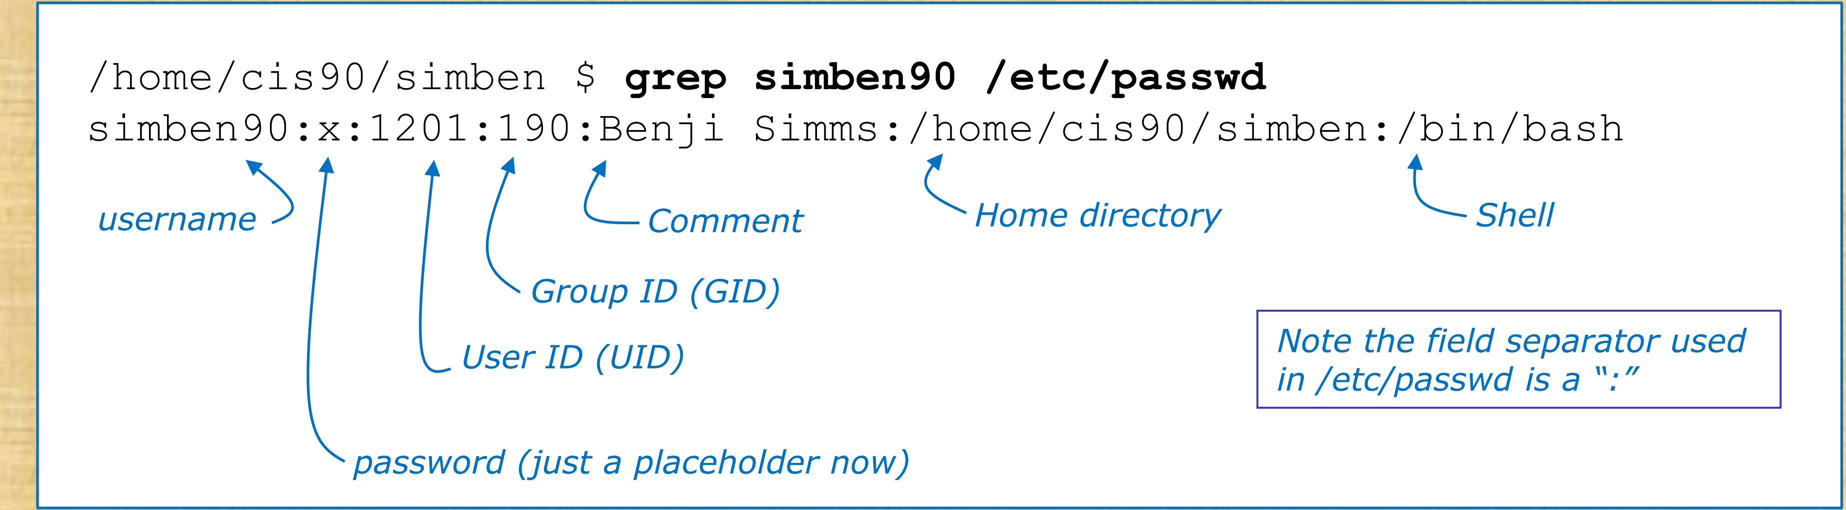
6) warning period (the number of days before expiration that user is warned)

7) inactive days (the number of days after password expires that account is disabled

8) expiration date (days since 1/1/1970) that the account may no longer be used

Note the major fields in /etc/shadow are delimited with a “:”. The encrypted password field is further delimited with a "$"

Class Activity



```
/home/cis90/simben $ grep simben90 /etc/passwd
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

username

password (just a placeholder now)

User ID (UID)

Group ID (GID)

Comment

Home directory

Shell

Note the field separator used in /etc/passwd is a ":"

1) Find your record in /etc/passwd

- Paste your UID (User ID) number in the chat window
- Paste your home directory in the chat window
- Paste your shell in the chat window

2) cat /etc/shadow
Give me a green check ✓ if you can view this file otherwise give me a red x

How are passwords stored in Linux (Understanding hashing with shadow utils)

Submitted by Sarath Pillai on Wed, 04/24/2013 - 16:57

A user account with a corresponding password for that account, is the primary mechanism that can be used for getting access to a Linux machine. Its very much logical to think that the passwords of all the user's in a system must first be saved in some kind of a file or a database, so that it can be verified during a user login attempt.

And you do not require the skill set and expertise of a computer security scientist to think rationally that if you get hold of that database or file, which stores all the passwords, you can easily get access to the machine.

Some people will argue at this point that the database, or the file that contains the passwords, are in an encoded format (hash value), and its not possible to know the real password, from the encoded password hash. However its possible to detect the real password from the encoded ones, by doing a dictionary attack against the encoded value. Let's get back to some basics before going ahead.

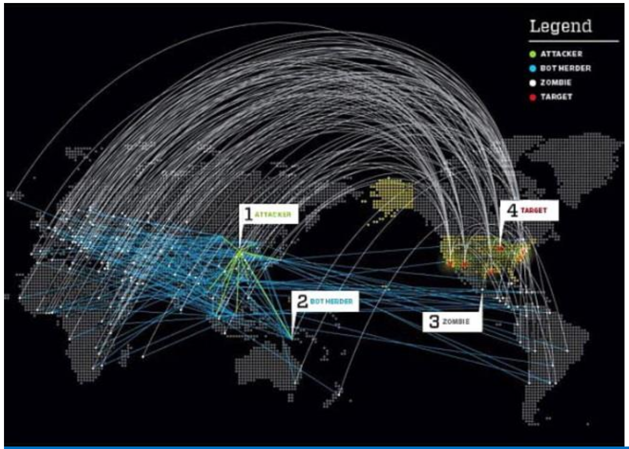
Hashing is a mathematical method to produce a fixed length encoded string for any given string. The

Excellent article on how passwords created and stored

Passwords

Your password

- Strong passwords are critical!
- **Botnets** and malicious **ne-er-do-wells** are constantly attempting to break into computers attached to the Internet! (Even my little Frodo VM at home)



http://mac-internet-security-software-review.toptenreviews.com/how-do-i-know-if-my-computer-is-a-botnet-zombie-.html

Top 50 usernames used by the ne'er-do-wells when attacking Opus

How to make a strong password

Current goal: require at least 2^{64} guesses

- Use upper case, lower case, punctuation, digits
- The longer the better (10 or more characters) 94^{10} => 65.64 bits of entropy
- Random, not in any dictionary
- Something you can remember (Google "best password managers")
- Different password for different services
- Keep it secret -- change when compromised
- A MUST for your email accounts!

GOOD (but not truly random)

`Wh0le#!!!!`	(Whole sh'bang)
`KuKu4(co)2`	(Cuckoo for Cocoa Puffs)
`#0p.&.s@ve`	(shop and save)
`Idl02$d@y`	(I do laundry on Tuesday)
`Iwb@tB0aWw`	(I was born at the bottom of a wishing well)

BETTER (pass phrases of 6 random words) 2000^6 => 65.79 bits of entropy

```
splendid roll arrest boiling silk shelter
heap pancake wooden complete inject ethereal
few balance note sedate alike tense
```

passwd command

Change user's password

Syntax:

passwd *[username]*

Example:

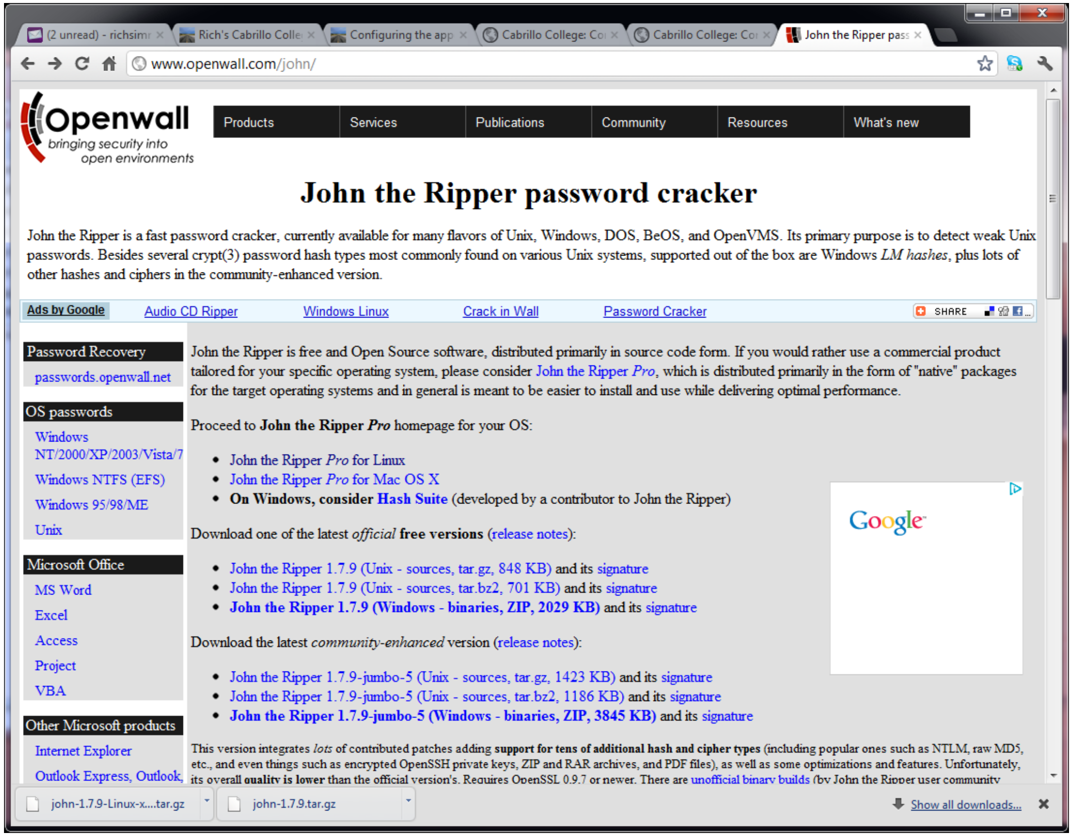
```
/home/cis90/simmsben $ passwd
Changing password for user simben90.
Changing password for simben90
(current) UNIX password:
New UNIX password:
Retype new UNIX password:
passwd: all authentication tokens updated successfully.
/home/cis90/simmsben $
```

Note, the passwords are not echoed as you type them.

This changes your password on Opus only (not other VMs, the forum or Canvas)

John the Ripper

An open source cracker that tries common passwords first followed by a brute force dictionary attack



John the Ripper password cracker

John the Ripper is a fast password cracker, currently available for many flavors of Unix, Windows, DOS, BeOS, and OpenVMS. Its primary purpose is to detect weak Unix passwords. Besides several crypt(3) password hash types most commonly found on various Unix systems, supported out of the box are Windows *LM hashes*, plus lots of other hashes and ciphers in the community-enhanced version.

John the Ripper is free and Open Source software, distributed primarily in source code form. If you would rather use a commercial product tailored for your specific operating system, please consider John the Ripper *Pro*, which is distributed primarily in the form of "native" packages for the target operating systems and in general is meant to be easier to install and use while delivering optimal performance.

Proceed to **John the Ripper *Pro*** homepage for your OS:

- John the Ripper *Pro* for Linux
- John the Ripper *Pro* for Mac OS X
- **On Windows, consider Hash Suite** (developed by a contributor to John the Ripper)

Download one of the latest *official* **free versions** (release notes):

- John the Ripper 1.7.9 (Unix - sources, tar.gz, 848 KB) and its signature
- John the Ripper 1.7.9 (Unix - sources, tar.bz2, 701 KB) and its signature
- **John the Ripper 1.7.9 (Windows - binaries, ZIP, 2029 KB)** and its signature

Download the latest *community-enhanced* version (release notes):

- John the Ripper 1.7.9-jumbo-5 (Unix - sources, tar.gz, 1423 KB) and its signature
- John the Ripper 1.7.9-jumbo-5 (Unix - sources, tar.bz2, 1186 KB) and its signature
- **John the Ripper 1.7.9-jumbo-5 (Windows - binaries, ZIP, 3845 KB)** and its signature

This version integrates *lots* of contributed patches adding **support for tens of additional hash and cipher types** (including popular ones such as NTLM, raw MD5, etc., and even things such as encrypted OpenSSH private keys, ZIP and RAR archives, and PDF files), as well as some optimizations and features. Unfortunately, its overall **quality is lower** than the official version's. Requires OpenSSL 0.9.7 or newer. There are unofficial binary builds (by John the Ripper user community

Instructor: Use daughter and john-demo aliases to demo. Cat password.1st for common passwords.

Four users: deanna, chakotay, kira and chekov with weak passwords:

How Big is Your Haystack?

... and how well hidden is **YOUR** needle?

Every password you use can be thought of as a needle hiding in a haystack. After all searches of common passwords and dictionaries have failed, an attacker must resort to a "brute force" search – ultimately trying every possible combination of letters, numbers and then symbols until the combination **you chose**, is discovered.

If every possible password is tried, sooner or later yours **will** be found.
The question is: Will that be **too** soon . . . or **enough** later?

This interactive brute force search space calculator allows you to experiment with password length and composition to develop an accurate and quantified sense for the safety of using passwords that can only be found through exhaustive search. Please see the discussion below for additional information.

The Password Haystack Concept in 150 Seconds
Los Angeles' KABC-TV produced a terrific & succinct two and a half minute explanation of the Password Haystacks concept: Click this link to view their quick introduction.

GRC's Interactive Brute Force Password "Search Space" Calculator
(*NOTHING* you do here ever leaves your browser. What happens here, stays here.)

● No Uppercase ● 5 Lowercase ● No Digits ● No Symbols 5 Characters

dummy

Enter and edit your test passwords in the field above while viewing the analysis below.

Brute Force Search Space Analysis:

Search Space Depth (Alphabet):	26
Search Space Length (Characters):	5 characters
Exact Search Space Size (Count): (count of all possible passwords with this alphabet size and up to this password's length)	12,356,630
Search Space Size (as a power of 10):	1.24×10^7

Time Required to Exhaustively Search this Password's Space:

Online Attack Scenario: (Assuming one thousand guesses per second)	3.43 hours
Offline Fast Attack Scenario: (Assuming one hundred billion guesses per second)	0.000124 seconds
Massive Cracking Array Scenario: (Assuming one hundred trillion guesses per second)	0.000000124 seconds

Note that typical attacks will be online password guessing limited to, at most, a few hundred guesses per second.

(The Haystack Calculator has been viewed 2,145,143 times since its publication.)

ConsumerReports.org
The prestigious "Consumer Reports" has also picked up on the simplicity and power of the "Password Haystacks" concept.

IMPORTANT!!! What this calculator is NOT . . .

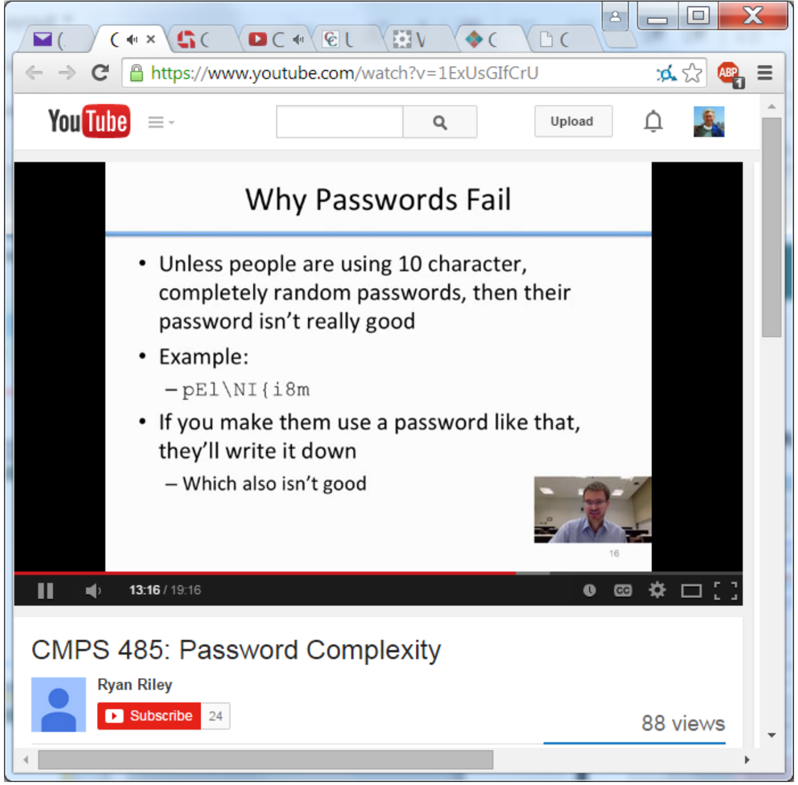
It is **NOT** a "Password Strength Meter."

Since it could be easily confused for one, it is very important for you to understand what it is, and what it isn't:

The #1 most commonly used password is "123456", and the 4th most common is "Password." So any password attacker and cracker would try those two passwords immediately. Yet the Search Space Calculator above shows the time to search for those two passwords online (assuming a very fast online rate of 1,000 guesses per second) as 18.52 minutes and 17.33 centuries respectively! If "123456" is the first password that's guessed, that wouldn't take 18.52 minutes. And no password cracker would wait 17.33 centuries before checking to see whether "Password" is the magic phrase.

Password strength calculator for random passwords

https://www.youtube.com/watch?v=1ExUsGIfCrU



Why Passwords Fail

- Unless people are using 10 character, completely random passwords, then their password isn't really good
- Example:
  - pEl\NI{i8m
- If you make them use a password like that, they'll write it down
  - Which also isn't good

CMPS 485: Password Complexity

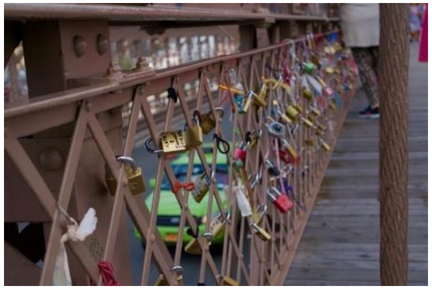
Excellent presentation on making strong passwords

Best Practices

Beginners guide to beefing up your online privacy and security



http://arstechnica.com/security/2016/12/a-beginners-guide-to-beefing-up-your-privacy-and-security-online/

- Install updates (especially browser and OS).
- Use strong passwords and passcodes.
- Encrypt your phones and computers.
- Use two-factor authentication.
- Use a password managers (example products: 1Password and LastPass).
- Encrypt SMS and voice calls (example products, Signal).
- Use VPNs on public Wi-Fi (example services, Private Internet Access).
- Secure end-to-end email (example ProtonMail).
- Delete old emails.
- For more in-depth strategies see EFF's Surveillance Self-Defense page.

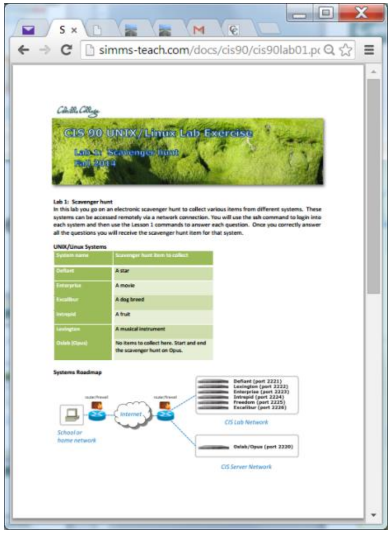
Lab Assignments

Pearls of Wisdom:

- Don't wait till the last minute to start.
- The *slower* you go the *sooner* you will be finished.
- A few minutes reading the forum can save you hour(s).
- Line up materials, references, equipment and software ahead of time.
- It's best if you fully understand each step as you do it. Use Google or refer back to lesson slides to understand the commands you are using.
- Use Google when trouble-shooting
- Keep a growing cheat sheet of commands and examples.
- Study groups are very productive and beneficial.
- Use the forum to collaborate, ask questions, get clarifications and share tips you learned while doing a lab.
- Plan for things to go wrong and give yourself time to ask questions and get answers.
- Late work is not accepted so submit what you have for partial credit.



simms-teach.com/docs/cis90/cis90lab01.p

CIS 90 UNIX/Linux Lab Exercise

Lab 1: Scavenger hunt

Fall 2014

Lab 1: Scavenger hunt

In this lab you go on an electronic scavenger hunt to collect various items from different systems. These systems can be accessed remotely via a network connection. You will use the ssh command to login into each system and then use the Lesson 1 commands to answer each question. Once you correctly answer all the questions you will receive the scavenger hunt item for that system.

UNIX/Linux Systems

System name	Scavenger hunt item to collect
Defiant	A star
Enterprise	A movie
Excalibur	A dog breed
Intrepid	A fruit
Lexington	A musical instrument
Oslab (Opus)	No items to collect here. Start and end the scavenger hunt on Opus.

Systems Roadmap

Defiant (port 2221)
Lexington (port 2222)
Enterprise (port 2223)
Intrepid (port 2224)
Freedom (port 2225)
Excalibur (port 2226)

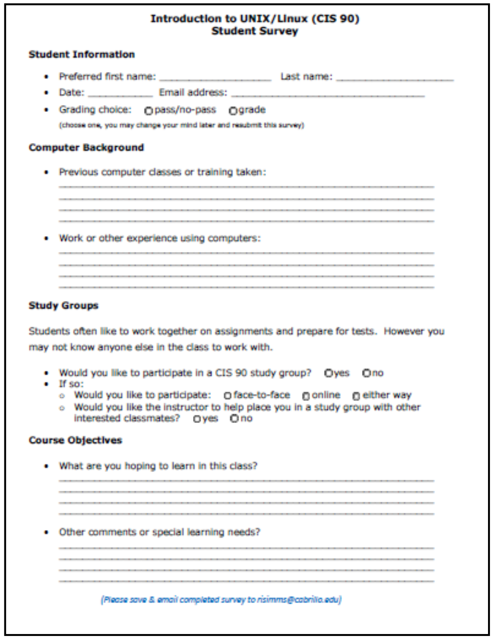
I'll start sending out LOR code names this week for ***everyone who sends or has sent me their survey****.*



Introduction to UNIX/Linux (CIS 90)
Student Survey

Student Information

- Preferred first name: ____________________ Last name: ____________________
- Date: ____________ Email address: ____________________________________
- Grading choice: ○ pass/no-pass ○ grade

(choose one, you may change your mind later and resubmit this survey)

Computer Background

- Previous computer classes or training taken:

____
____
____
____

- Work or other experience using computers:

____
____
____
____

Study Groups

Students often like to work together on assignments and prepare for tests. However you may not know anyone else in the class to work with.

- Would you like to participate in a CIS 90 study group? ○ yes ○ no
- If so:
  - Would you like to participate: ○ face-to-face ○ online ○ either way
  - Would you like the instructor to help place you in a study group with other interested classmates? ○ yes ○ no

Course Objectives

- What are you hoping to learn in this class?

____
____
____
____

- Other comments or special learning needs?

____
____
____
____

(Please save & email completed survey to risimms@cabrillo.edu)

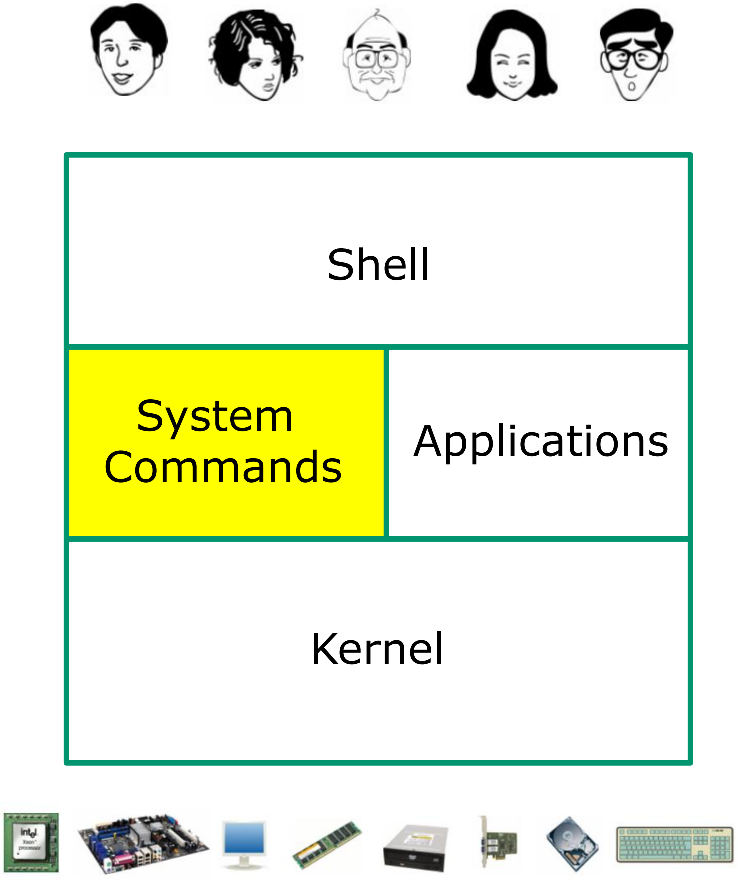
Lesson 2
Commands

Lesson 2 commands for your toolbox

echo	- Prints text and variables
banner	- Make a banner
ls	- List directory contents
cat	- View file (name comes from concatenate)
file	- Show additional information about a file
type	- Shows where a command resides on the path
apropos	- Searches the whatis database for strings
whatis	- Searches the whatis database for commands
man	- Show the manual page for a command
info	- Alternate online documentation tool
bc	- Binary calculator
passwd	- Change password
set	- List all shell variables
env	- List all environment variables

UNIX/Linux Architecture

System Commands



Shell

System Commands

Applications

Kernel

- 100’s of system commands and utilities.
- Commands like **ls** (list directories), **cat** (print a file), **rm** (remove a file), … etc.
- Utilities like **vi** (text editor), **sort** (sorts file contents), **find** (searches), … etc.
- Larger utilities like **sendmail** (email), **tar** (backup), **tcpdump** (sniffer), … etc.
- Administrative utilities like **useradd**, **groupadd**, **passwd** (change password), … etc.

Follow Me

echo	- Prints text and variables
banner	- Make a banner
ls	- List directory contents
cat	- View file (name comes from concatenate)
file	- Show additional information about a file
type	- Shows where a command resides on the path
apropos	- Searches the whatis database for strings
whatis	- Searches the whatis database for commands
man	- Show the manual page for a command
info	- Alternate online documentation tool
bc	- Binary calculator

Lesson 2 Commands

Supplemental examples

echo command

Print text and variables

Syntax:

echo *[string]*

```
/home/cis90/simben $ echo hello rich
hello rich

/home/cis90/simben $ echo joy to the world
joy to the world
```

banner command

Output a banner

Syntax:

banner *[string]*

banner *[string] [string] … [string]*

```
/home/cis90/simben $ banner I Love Linux
 #####
   #
   #
   #
   #
   #
 #####

#       ####### #     # #######
#       #     # #     # #
#       #     # #     # #
#       #     # #     # #####
#       #     #  #   #  #
#       #     #   # #   #
####### #######    #    #######

#        #####  #     # #     # #     #
#          #    ##    # #     #  #   #
#          #    # #   # #     #   # #
#          #    #  #  # #     #    #
#          #    #   # # #     #   # #
#          #    #    ## #     #  #   #
#######  #####  #     #  #####  #     #
```

Similar to echo command but outputs banner sized letters instead

ls command

List files or directory contents

Syntax:

ls *[pathname]*

ls *[pathname] [pathname] … [pathname]*

```
/home/cis90/simben $ ls
bigfile  Lab2.0         mission    proposal3   text.fxd
bin      Lab2.1         Poems      small_town  timecal
empty    letter         proposal1  spellk      what_am_i
Hidden   Miscellaneous  proposal2  text.err
```

Listing the contents of the current directory

```
/home/cis90/simben $ ls Poems/
Angelou  Blake      Neruda   Shakespeare  Yeats
ant      Dickenson  nursery  twister
```

Listing the contents of the Poems directory

```
/home/cis90/simben $ ls mission /bin/ps /usr/local/bin/banner
/bin/ps  mission  /usr/local/bin/banner
```

Listing three files

Regular files show as black, directories show as blue and executable programs/scripts show as green

cat command

Concatenate and view file contents

Syntax:

cat *[pathname]*

cat *[pathname] [pathname] … [pathname]*

```
/home/cis90/simben $ cat letter
Hello Mother!  Hello Father!

Here I am at Camp Granada.  Things are very entertaining,
and they say we'll have some fun when it stops raining.

< snipped >

Wait a minute!  It's stopped hailing!  Guys are swimming!
Guys are sailing!  Playing baseball, gee that's better!
Mother, Father, kindly disregard this letter.

                                                Alan Sherman
```

What happens if you spell cat backwards instead? ☺

file command

Show additional file information

Syntax:

file *[pathname]*

file *[pathname] [pathname] … [pathname]*

```
/home/cis90/simben $ file letter
letter: ASCII English text

/home/cis90/simben $ file Miscellaneous/
Miscellaneous/: directory

/home/cis90/simben $ file timecal mission /usr/bin/cal
timecal:      Bourne-Again shell script text executable
mission:      ASCII English text
/usr/bin/cal: ELF 32-bit LSB executable, Intel 80386, version 1
(SYSV), dynamically linked (uses shared libs), for GNU/Linux
2.6.18, stripped
```

type command

Search for a command on the path

#Barcelona

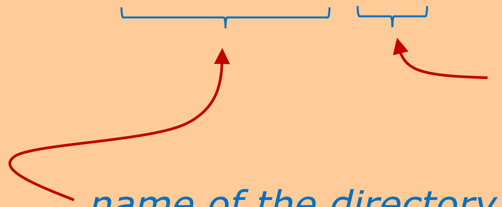
Syntax:

type *[command]*

type *[command] [command] … [command]*

```
[rsimms@opus-ii ~]$ type cal
cal is /usr/bin/cal
```

***cal** is located in the **/usr/bin** directory*



name of the file (command/program)

name of the directory where file is found

```
[rsimms@opus-ii ~]$ type bogus
-bash: type: bogus: not found
```

***bogus** is not on the user's path*

```
[rsimms@opus-ii ~]$ type uname cal
uname is /bin/uname
cal is /usr/bin/cal
```

***uname** is in the **/bin** directory*
***cal** is in the **/usr/bin** directory*

```
[rsimms@opus-ii ~]$ type type
type is a shell builtin
```

***type** is built into the shell program*

apropos command

search the whatis database for strings

Syntax:

apropos *string*

```
/home/cis90/simben $ apropos echo
echo                     (1)   - display a line of text
echo                     (1p)   - write arguments to standard output
echo [builtins]          (1)   - bash built-in commands, see bash(1)
lessecho                 (1)   - expand metacharacters
pam_echo                 (8)   - PAM module for printing text messages
ping                     (8)   - send ICMP ECHO_REQUEST to network hosts
ping6 [ping]             (8)   - send ICMP ECHO_REQUEST to network hosts
```

whatis command

search the whatis database for commands

Syntax:

whatis *command*

```
/home/cis90/simben $ whatis echo
echo                     (1)   - display a line of text
echo                     (1p)   - write arguments to standard output
echo [builtins]          (1)   - bash built-in commands, see bash(1)
```

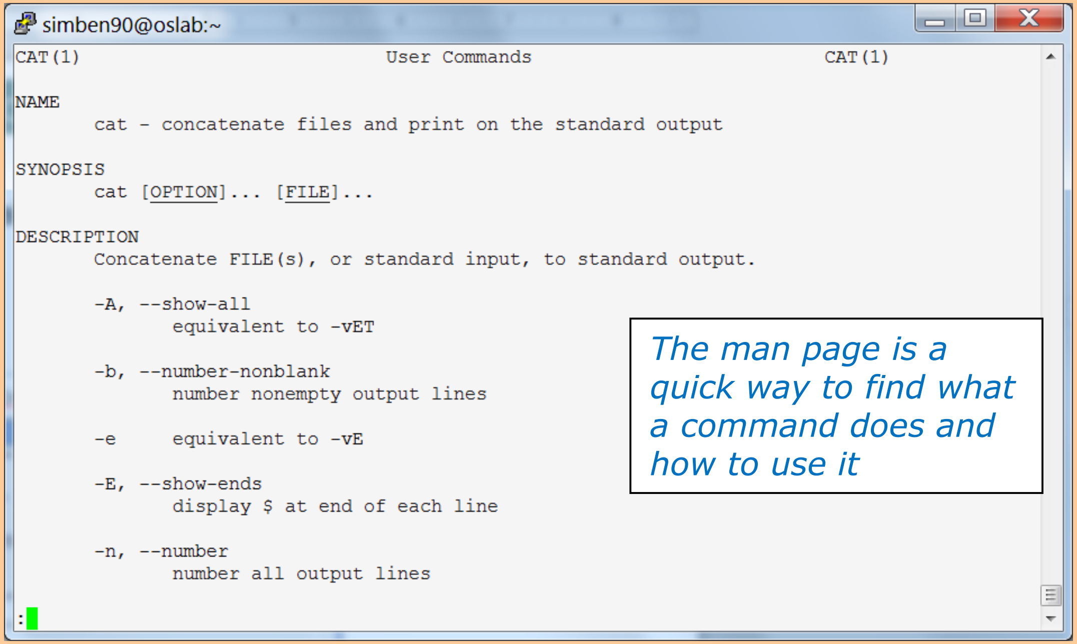
man command

Show the manual page (documentation) for a command

Syntax:

man *command*

```
/home/cis90/simben $ man cat
```



```
CAT(1)                           User Commands                          CAT(1)

NAME
       cat - concatenate files and print on the standard output

SYNOPSIS
       cat [OPTION]... [FILE]...

DESCRIPTION
       Concatenate FILE(s), or standard input, to standard output.

       -A, --show-all
              equivalent to -vET

       -b, --number-nonblank
              number nonempty output lines

       -e     equivalent to -vE

       -E, --show-ends
              display $ at end of each line

       -n, --number
              number all output lines

:
```

The man page is a quick way to find what a command does and how to use it

Use these keys to scroll

Use q key to quit

info command

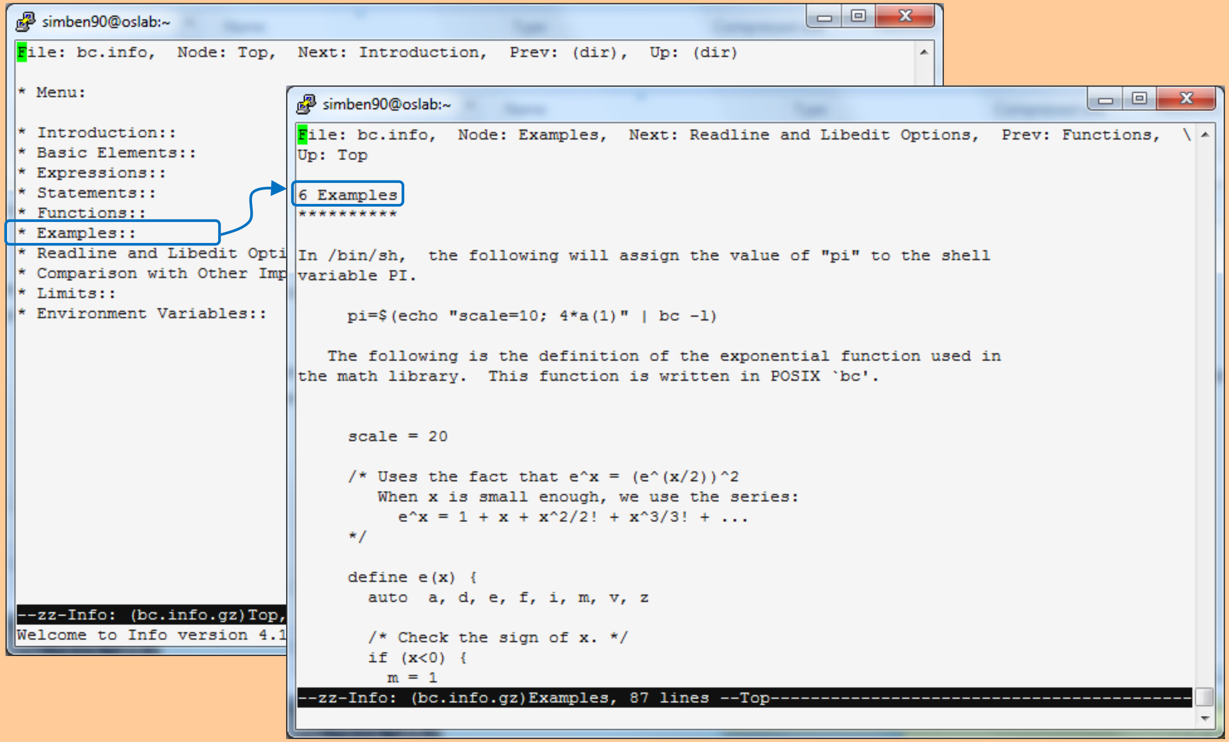
Alternate documentation tool for commands

Syntax:

info *command*

Similar to man but has has links to additional pages

```
/home/cis90/simben $ info bc
```



simben90@oslab:~

```
File: bc.info,  Node: Top,  Next: Introduction,  Prev: (dir),  Up: (dir)

Up: Top

6 Examples
**********

In /bin/sh,  the following will assign the value of "pi" to the shell
variable PI.

     pi=$(echo "scale=10; 4*a(1)" | bc -l)

   The following is the definition of the exponential function used in
the math library.  This function is written in POSIX `bc'.

     scale = 20

     /* Uses the fact that e^x = (e^(x/2))^2
        When x is small enough, we use the series:
          e^x = 1 + x + x^2/2! + x^3/3! + ...
     */

     define e(x) {
       auto  a, d, e, f, i, m, v, z

       /* Check the sign of x. */
       if (x<0) {
         m = 1
--zz-Info: (bc.info.gz)Examples, 87 lines --Top----------------------------------------
```

Use q key to quit

Use Enter to follow a link (*)

Use L to go back to last page

bc command
A binary calculator

Syntax:
bc

```
/home/cis90/simben $ bc
bc 1.06.95
Copyright 1991-1994, 1997, 1998, 2000, 2004, 2006
Free Software Foundation, Inc.
This is free software with ABSOLUTELY NO WARRANTY.
For details type `warranty'.
2+2
4
3*30
90
(3*31)+251*1.5
469.5
quit
/home/cis90/simben $
```

Enter mathematical expressions for bc to solve

Use quit to end program

The Path

The Path

The shell uses your path to locate commands to execute

- A path is a ordered set of directories along which the shell will search to locate commands to execute
- The path is defined by the PATH variable
- Show your path with **echo $PATH**
- If you specify a command *xxxx* that the shell cannot find on the path it will print the following error message:

  -bash: *xxxx*: command not found

- To run a command that is not on your path the complete absolute or relative pathname must be specified. e.g. **/usr/bin/uname** instead of just **uname.**

Shell Path

The path is used by the shell to locate commands to run

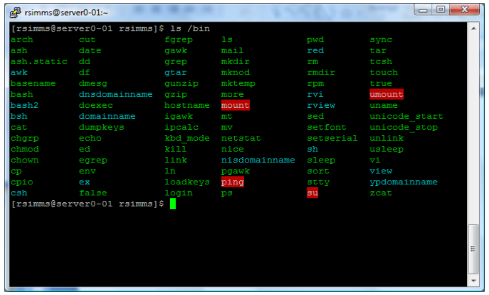
```
/home/cis90/simben $ echo $PATH
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:/usr/sbin:/sbin:/home/cis90/simben/../bin:/home/cis90/simben/bin:.
```

The colon character is used to separate directories on the path

Locations of common commands

Directories of common commands

/bin



```
[rsimms@server0-01 rsimms]$ ls /bin
arch        cut            fgrep     ls             pwd        sync
ash         date           gawk      mail           red        tar
ash.static  dd             grep      mkdir          rm         tcsh
awk         df             gtar      mknod          rmdir      touch
basename    dmesg          gunzip    mktemp         rpm        true
bash        dnsdomainname  gzip      more           rvi        umount
bash2       doexec         hostname  mount          rview      uname
bsh         domainname     igawk     mt             sed        unicode_start

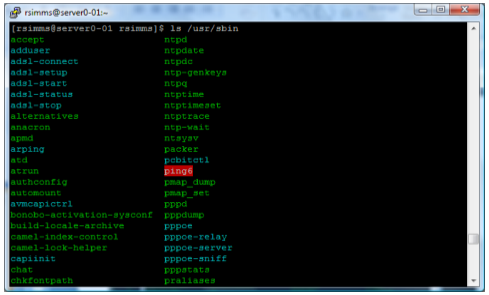
debugreiserfs     ipppd                  mount.smb            service
```

System administration commands are in /sbin and /usr/sbin

/usr/sbin

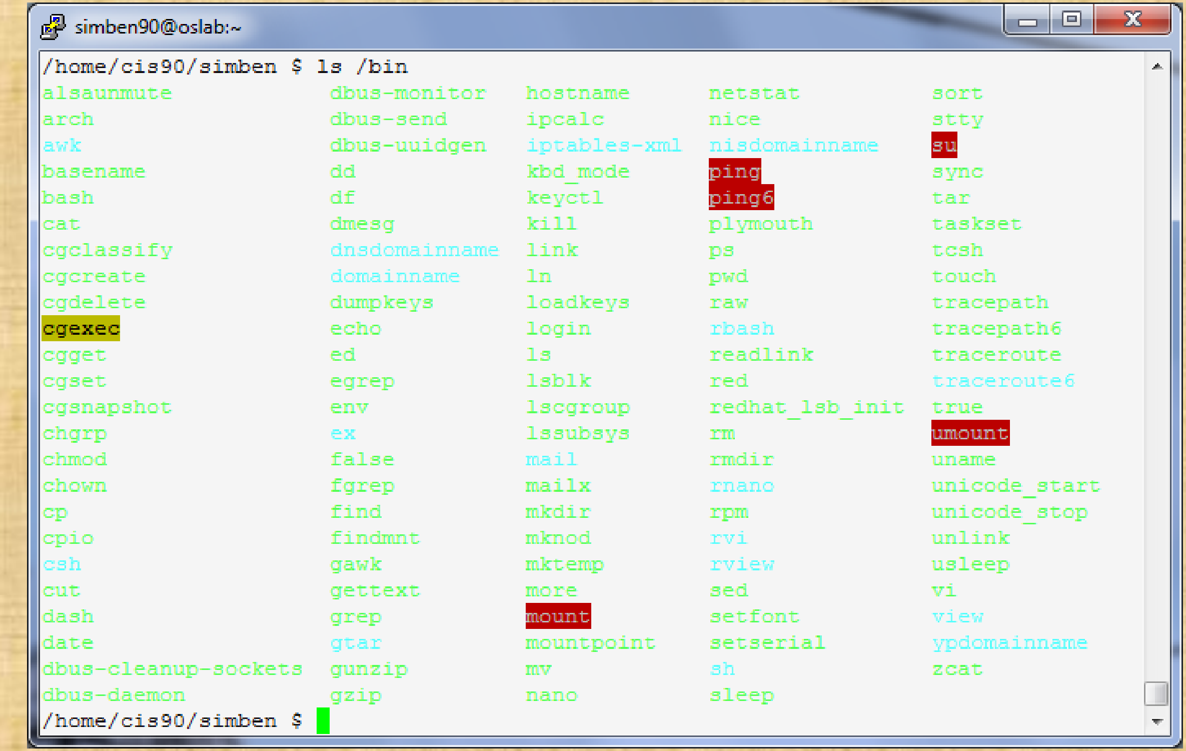


```
[rsimms@server0-01 rsimms]$ ls /usr/sbin
accept                     ntpd
adduser                    ntpdate
adsl-connect               ntpdc
adsl-setup                 ntp-genkeys
adsl-start                 ntpq
adsl-status                ntptime
adsl-stop                  ntptimeset
alternatives               ntptrace
anacron                    ntp-wait
apmd                       ntsysv
arping                     packer
atd                        pcbitctl
atrun                      ping6
authconfig                 pmap_dump
automount                  pmap_set
avmcapictrl                pppd
bonobo-activation-sysconf  pppdump
build-locale-archive       pppoe
camel-index-control        pppoe-relay
camel-lock-helper          pppoe-server
capiinit                   pppoe-sniff
chat                       pppstats
chkfontpath                praliases
```

*Most commands reside in these four directories. They can be found in other places as well. For example system administrators often put custom commands in **/usr/local/bin***

The /bin directory

ls /bin



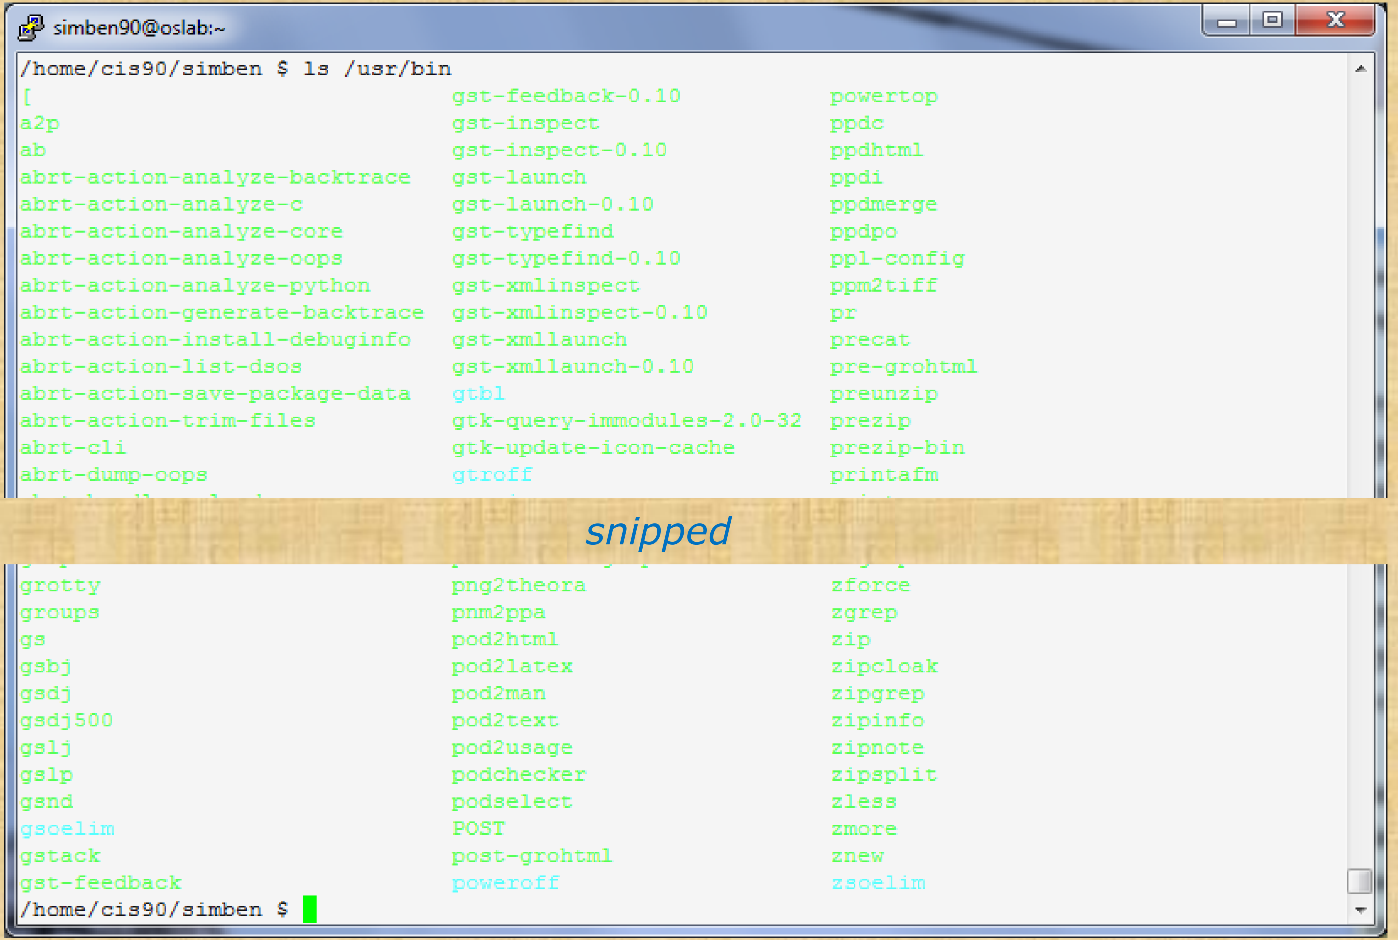
```
/home/cis90/simben $ ls /bin
alsaunmute            dbus-monitor   hostname      netstat          sort
arch                  dbus-send      ipcalc        nice             stty
awk                   dbus-uuidgen   iptables-xml  nisdomainname    su
basename              dd             kbd_mode      ping             sync
bash                  df             keyctl        ping6            tar
cat                   dmesg          kill          plymouth         taskset
cgclassify            dnsdomainname  link          ps               tcsh
cgcreate              domainname     ln            pwd              touch
cgdelete              dumpkeys       loadkeys      raw              tracepath
cgexec                echo           login         rbash            tracepath6
cgget                 ed             ls            readlink         traceroute
cgset                 egrep          lsblk         red              traceroute6
cgsnapshot            env            lscgroup      redhat_lsb_init  true
chgrp                 ex             lssubsys      rm               umount
chmod                 false          mail          rmdir            uname
chown                 fgrep          mailx         rnano            unicode_start
cp                    find           mkdir         rpm              unicode_stop
cpio                  findmnt        mknod         rvi              unlink
csh                   gawk           mktemp        rview            usleep
cut                   gettext        more          sed              vi
dash                  grep           mount         setfont          view
date                  gtar           mountpoint    setserial        ypdomainname
dbus-cleanup-sockets  gunzip         mv            sh               zcat
dbus-daemon           gzip           nano          sleep
/home/cis90/simben $
```

/bin has essential commands used by everyone.

Do you see any of the commands we learned in Lesson 1 in the /bin directory? Type the names of those commands in the chat window.

The /usr/bin directory

`ls /usr/bin`



```
/home/cis90/simben $ ls /usr/bin
[                               gst-feedback-0.10           powertop
a2p                             gst-inspect                 ppdc
ab                              gst-inspect-0.10            ppdhtml
abrt-action-analyze-backtrace   gst-launch                  ppdi

gss_destroy_creds                      pwck                        zic
/home/cis90/simben $
```

These are additional commands and utilities are typically used by system administrators.

This is where commands like ***useradd, userdel, tcpdump*** *are located.*

You will learn how to use these commands in CIS 191 and CIS 192.

Use the type command to find a command on the path

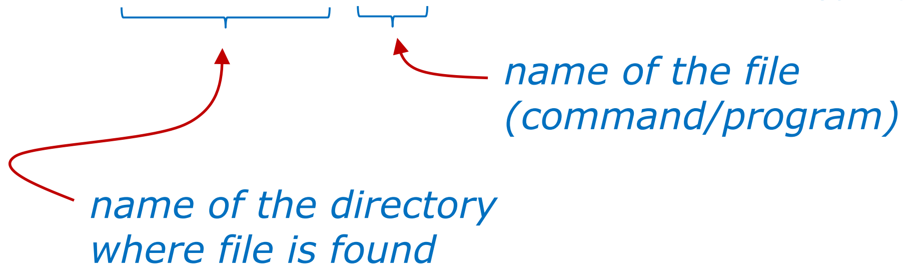
Syntax:

type *[command]*

type *[command] [command] … [command]*

```
[rsimms@opus run]$ type cal
cal is /usr/bin/cal
```

***cal** is located in the **/usr/bin** directory*



name of the file (command/program)

name of the directory where file is found

```
[rsimms@opus-ii ~]$ type bogus
-bash: type: bogus: not found
```

***bogus** is not on the user's path*

```
[rsimms@opus run]$ type uname cal
uname is /bin/uname
cal is /usr/bin/cal
```

***uname** is in the **/bin** directory*
***cal** is in the **/usr/bin** directory*

```
[rsimms@opus-ii ~]$ type type
type is a shell builtin
```

***type** is built into the shell*

Class Activity

1) Where are the **scavenge** and **sc** commands?

2) What kind of files are they?

Type your answers in the chat window.

To get answer:

```
/home/cis90/simben $ type ssh
ssh is /usr/bin/ssh
```

ssh is in the /usr/bin directory

Switch to electronic white board

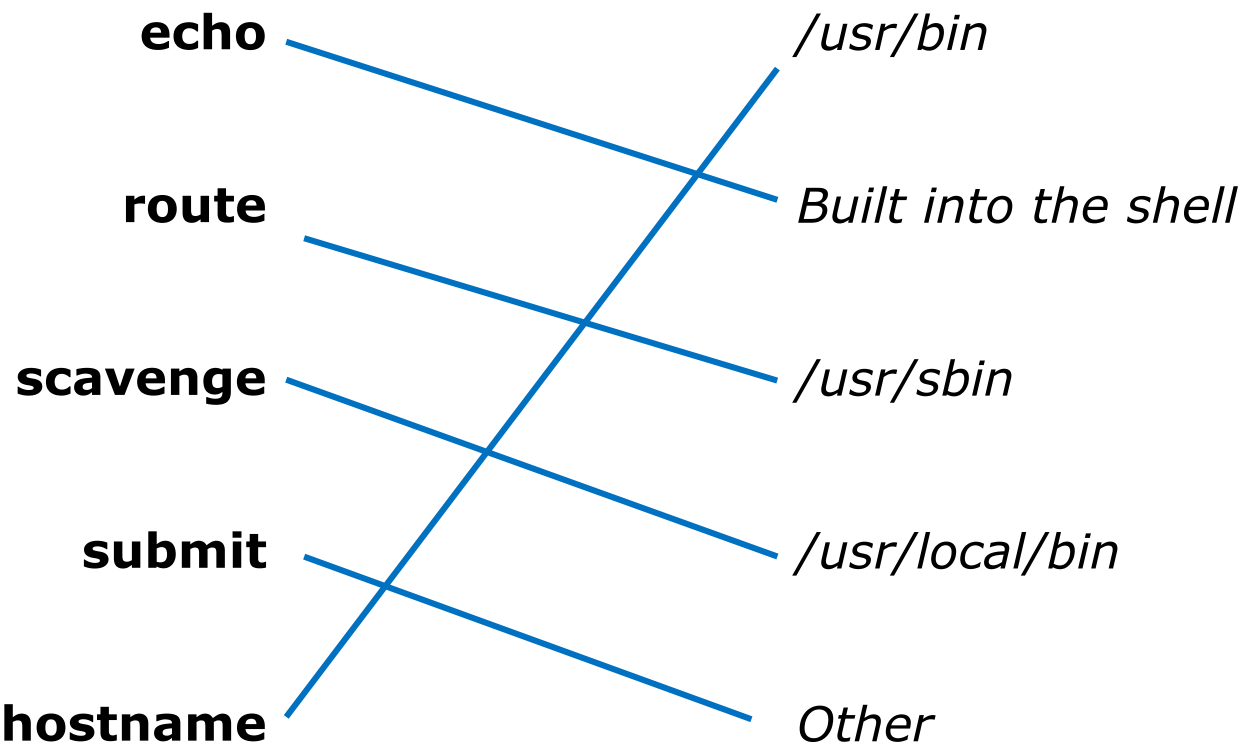
Class Activity

Draw a line connecting the command to the directory where it resides

echo	*/usr/bin*
route	*Built into the shell*
scavenge	*/usr/sbin*
submit	*/usr/local/bin*
hostname	*Other*

Class Activity

Draw a line connecting the command to the directory where it resides



echo	*/usr/bin*
route	*Built into the shell*
scavenge	*/usr/sbin*
submit	*/usr/local/bin*
hostname	*Other*

Programs

Binary code
vs text scripts

UNIX commands & utilities are executable programs

A program can be binary code:

- Binary machine code is unprintable. A programmer must use hex dumps to examine it.
- Binary machine code executes very quickly and is targeted for a specific CPU instruction set.
- The binaries are produced by compiling source code written in a higher level language such as C, or C++.
- Examples: The ls command, the uname command, the bash shell itself.

A program can be a text-based script:

- A script can be directly viewed and printed.
- A script does not need to be compiled. It is interpreted on the fly and because of that doesn't run as fast as binary code.
- Common scripting languages include bash, perl and python.
- Examples: The apropos command.

Two example programs: apropos and cal

Lets take a deep dive on two random commands:

apropos - searches the whatis database for a string of text

cal - prints a calendar

I'll be using this graphic to indicate a program that has been loaded into memory to be executed

apropos

Try both programs (commands) to see what they do

cal

*The **apropos** command searches the whatis database.*

```
/home/cis90/simben $ apropos uname
oldolduname [obsolete] (2)   - obsolete system calls
olduname [obsolete]  (2)   - obsolete system calls
uname                (1)   - print system information
uname                (1p)   - return system name
uname                (2)   - get name and information about current kernel
uname                (3p)   - get the name of the current system
```

*The **cal** command prints a calendar*

```
/home/cis90/simben $ cal
   February 2012
Su Mo Tu We Th Fr Sa
          1  2  3  4
 5  6  7  8  9 10 11
12 13 14 15 16 17 18
19 20 21 22 23 24 25
26 27 28 29
```

Use **type** to find where the programs are on the path

apropos

cal

```
/home/cis90/simben $ type apropos cal
apropos is hashed (/usr/bin/apropos)
cal is /usr/bin/cal
```

*The **apropos** and **cal** commands are both in the **/usr/bin** directory.*

Note: Sometimes you will see "hashed" which means the command has been run previously and its location on the path has been temporarily "remembered". This is to speed up subsequent path searches for the same command.

Use the **ls** command to list the programs files

apropos

cal

```
/home/cis90/simben $ type apropos cal
apropos is hashed (/usr/bin/apropos)
cal is /usr/bin/cal
```

```
/home/cis90/simben $ ls /usr/bin/apropos /usr/bin/cal
/usr/bin/apropos  /usr/bin/cal
```

Note, both files show as green because they are executables (more on this later)

```
/home/cis90/simben $ ls -F /usr/bin/apropos /usr/bin/cal
/usr/bin/apropos*  /usr/bin/cal*
```

*FYI, use the -F option if color blind. Executables have a * suffix.*

Use the **file** command to get additional info on the files

apropos

cal

```
/home/cis90/simben $ file /usr/bin/apropos
/usr/bin/apropos: POSIX shell script text executable
```

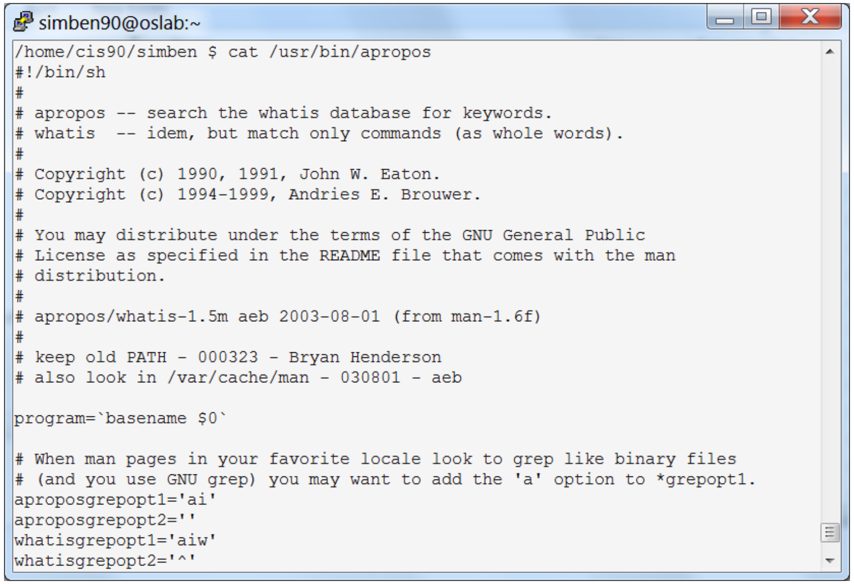
***apropos** is a shell script*

```
/home/cis90/simben $ file /usr/bin/cal
/usr/bin/cal: ELF 32-bit LSB executable, Intel 80386, version
1 (SYSV), dynamically linked (uses shared libs), for GNU/Linux
2.6.18, stripped
```

***cal** is binary code (has been compiled from higher level source code)*

Viewing the contents of the program files

cat /usr/bin/apropos



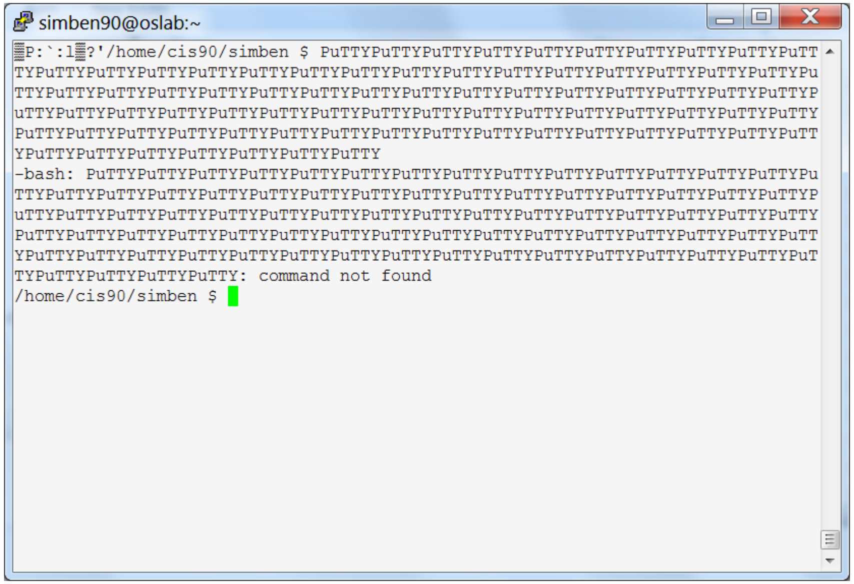
```
/home/cis90/simben $ cat /usr/bin/apropos
#!/bin/sh
#
# apropos -- search the whatis database for keywords.
# whatis  -- idem, but match only commands (as whole words).
#
# Copyright (c) 1990, 1991, John W. Eaton.
# Copyright (c) 1994-1999, Andries E. Brouwer.
#
# You may distribute under the terms of the GNU General Public
# License as specified in the README file that comes with the man
# distribution.
#
# apropos/whatis-1.5m aeb 2003-08-01 (from man-1.6f)
#
# keep old PATH - 000323 - Bryan Henderson
# also look in /var/cache/man - 030801 - aeb

program=`basename $0`

# When man pages in your favorite locale look to grep like binary files
# (and you use GNU grep) you may want to add the 'a' option to *grepopt1.
aproposgrepopt1='ai'
aproposgrepopt2=''
whatisgrepopt1='aiw'
whatisgrepopt2='^'
```

*The **cat** command can print the apropos file because it is a readable (and editable) **ASCII** text script*

cat /usr/bin/cal



```
▒P:`:1▒?'/home/cis90/simben $ PuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTT
TYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPu
TTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYP
uTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTY
PuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTT
YPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTY
-bash: PuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPu
TTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYP
uTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTY
PuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTT
YPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuTTYPuT
TYPuTTYPuTTYPuTTYPuTTY: command not found
/home/cis90/simben $
```

*The **cat** command "chokes" trying to print the **binary** cal file because it is full of unprintable machine code.*

How binary programs are created

From: gcal-3.01.tar.gz

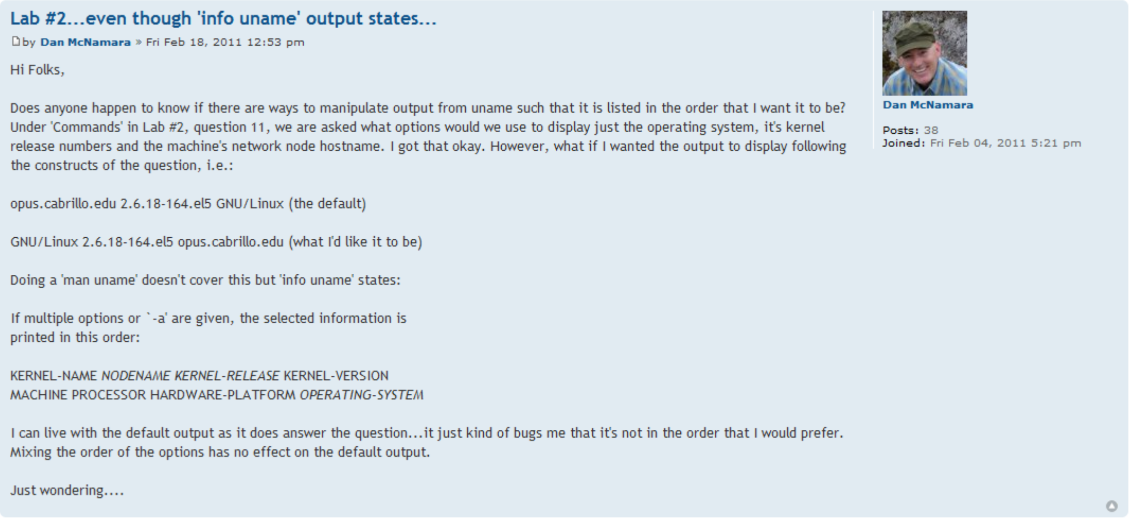
s), stripped
[rsimms@nosmo src]$
```

Because GNU Linux software is licensed under the GPL you can make your own custom version of the commands or the kernel!

FYI

See this forum post from a previous class for an example of obtaining the source code for a Linux command and modifying it:

http://oslab.cabrillo.edu/forum/viewtopic.php?f=31&t=683&p=2774



Lab #2...even though 'info uname' output states...

by **Dan McNamara** » Fri Feb 18, 2011 12:53 pm

Hi Folks,

Does anyone happen to know if there are ways to manipulate output from uname such that it is listed in the order that I want it to be? Under 'Commands' in Lab #2, question 11, we are asked what options would we use to display just the operating system, it's kernel release numbers and the machine's network node hostname. I got that okay. However, what if I wanted the output to display following the constructs of the question, i.e.:

opus.cabrillo.edu 2.6.18-164.el5 GNU/Linux (the default)

GNU/Linux 2.6.18-164.el5 opus.cabrillo.edu (what I'd like it to be)

Doing a 'man uname' doesn't cover this but 'info uname' states:

If multiple options or `-a' are given, the selected information is
printed in this order:

KERNEL-NAME *NODENAME KERNEL-RELEASE* KERNEL-VERSION
MACHINE PROCESSOR HARDWARE-PLATFORM *OPERATING-SYSTEM*

I can live with the default output as it does answer the question...it just kind of bugs me that it's not in the order that I would prefer. Mixing the order of the options has no effect on the default output.

Just wondering....

Dan McNamara

*It all started when Dan did Lab 2 and wanted to change the way **uname** ordered its output!*

Class Activity

1) Where is the **scavenge** program?

   Hint: use the **type** command with scavenge as the argument.

   Type your answer in the chat window.

2) Is the **scavenge** command a binary executable or a shell script?

   Hint: use the **file** command with the location of scavenge as the argument.

   Type your answer in the chat window.

3) Can you **cat** the **scavenge** command?

   Paste a line of output in the chat window.

4) Is **scavenge** a UNIX command?

   Hint: use the **man** or **whatis** commands with scavenge as the argument.

   Type your answer in the chat window.

```
/home/cis90/simben $ type scavenge
scavenge is /usr/local/bin/scavenge
/home/cis90/simben $ file /usr/local/bin/scavenge
/usr/local/bin/scavenge: Bourne-Again shell script text executable
/home/cis90/simben $ cat /usr/local/bin/scavenge
<snipped>
/home/cis90/simben $ man scavenge
No manual entry for scavenge
/home/cis90/simben $
```

Inputs to Commands

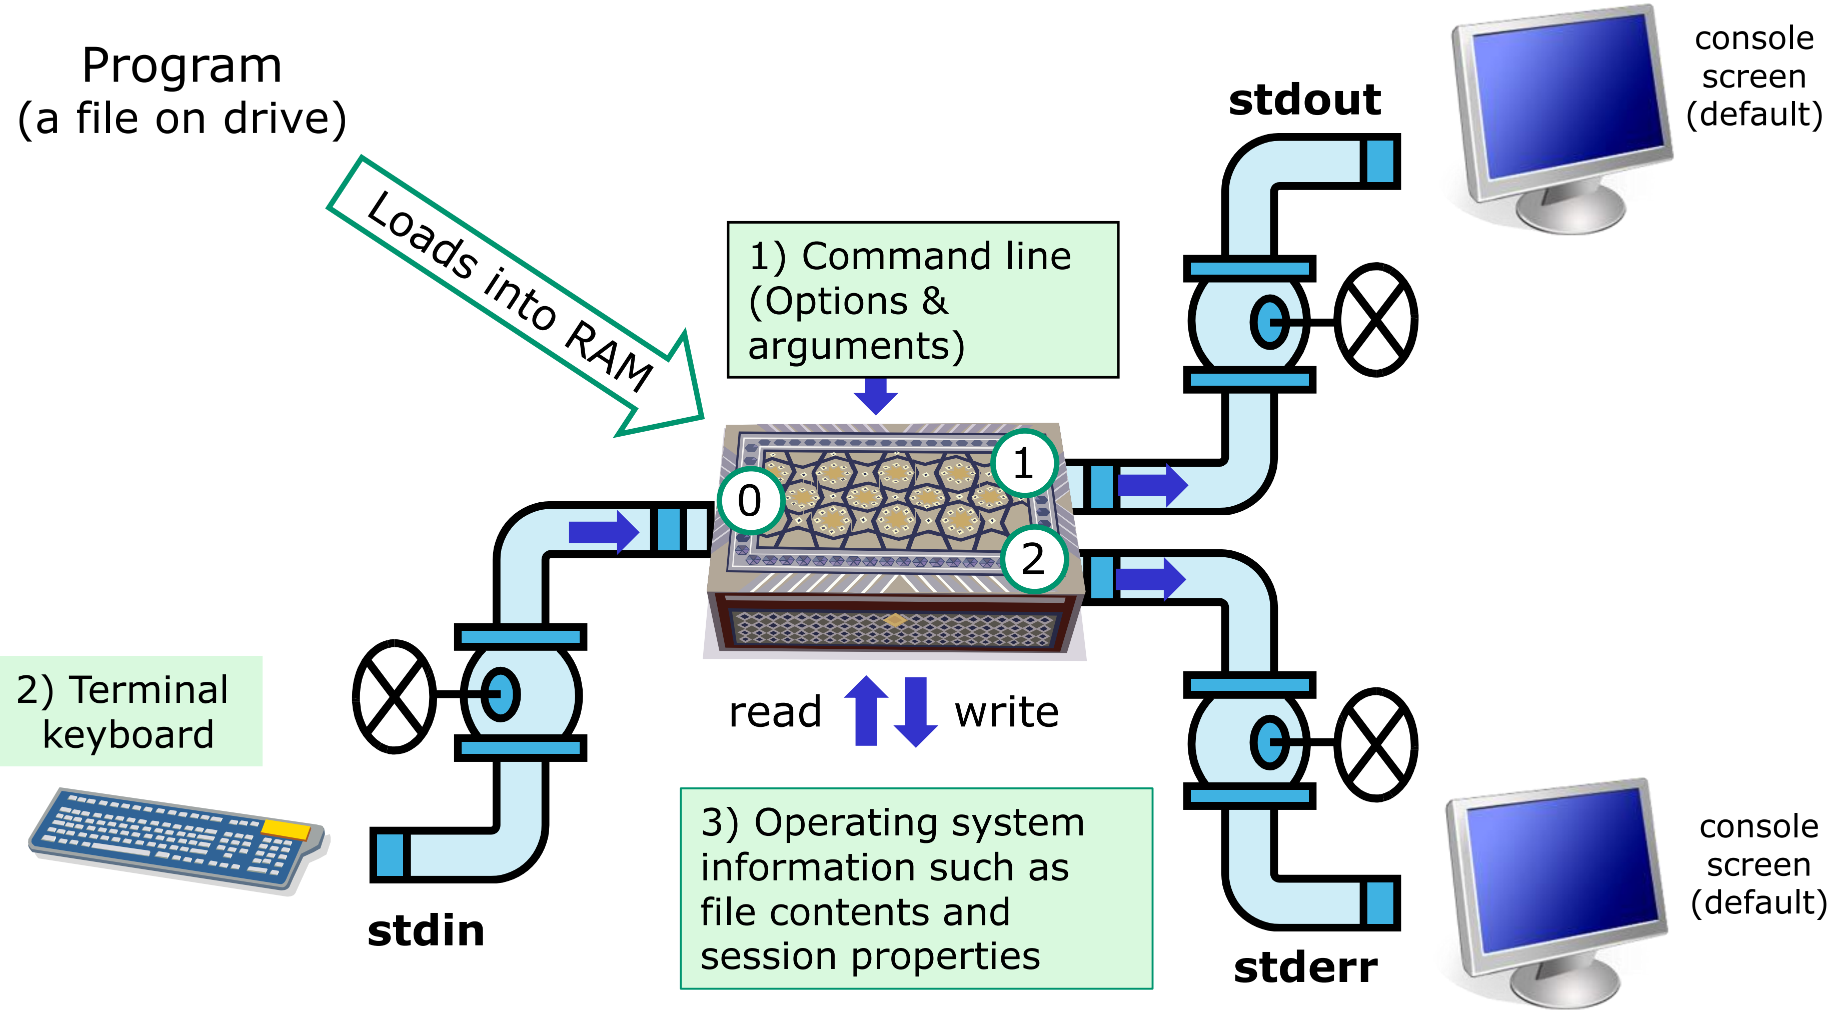
You will get these questions when you submit Lab 2

1) Name a UNIX command that gets its input only from the command line?

2) Name an interactive command that reads its input from the keyboard?

3) Name a UNIX command that gets its input from the Operating System?

Inputs to Commands



Name a UNIX command that gets its input only from the command line?

```
/home/cis90/simmen $ echo hello world
hello world
```

```
/home/cis90/simben $ banner hello world
#     # ####### #       #       #######
#     # #       #       #       #     #

Command Syntax

(grammar lesson)

Some new vocabulary

from Dictionary.com

parse [pahrs, pahrz] ***verb, parsed, pars·ing*.**
verb (used with object)

1. to analyze (a sentence) in terms of grammatical constituents, identifying the parts of speech, syntactic relations, etc.

2. to describe (a word in a sentence) grammatically, identifying the part of speech, inflectional form, syntactic function, etc.

3. Computers . to analyze (a string of characters) in order to associate groups of characters with the syntactic units of the underlying grammar.

One of the things the shell does is parse what is typed by the user. This results in the command line being analyzed to identify the command, the options, the arguments and any redirection.

Command Syntax

Command	Options	Arguments	Redirection

Command – is the name of an executable program file.

Options – a special type of argument that is used to control how the program operate operates.

Arguments – the objects the command is directed to work upon. Multiple arguments are separated by spaces.

Redirection – The default input stream (stdin) is from the console keyboard, the default output (stdout) and error (stderr) streams go to the console screen. Redirection can modify these streams to other files or devices.

Command Syntax Rules

Command	Options	Arguments	Redirection

Command – usually at the beginning of the line

Options – follow the command, usually starts with a dash, may be combined after a single "-" or separated by spaces. Note that `-iad` is the same as `-i -a -d`

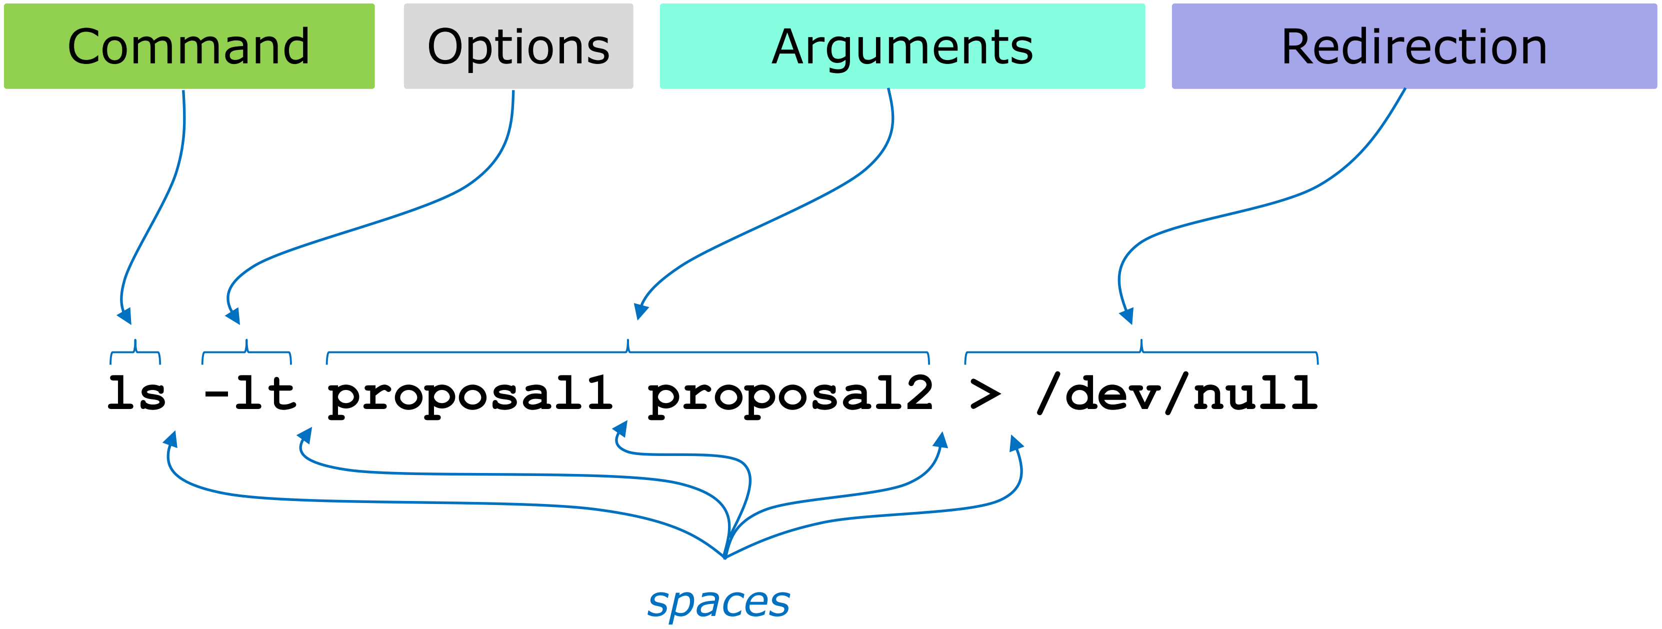
Arguments – follow the options. Multiple arguments must be separated by spaces.

Redirection – Will be a <, >, >>, 2> or | followed by the I/O redirection.

Spaces are required between commands, options, arguments and any redirection

Multiple spaces are treated as a single space (unless inside quotes)

Command Syntax Example



Command

Options

Arguments

Redirection

```
ls -lt proposal1 proposal2 > /dev/null
```

spaces

Don't worry now about what the example command above does, for now we just want to be able to parse it into the command, options, arguments and any redirection

More Command Syntax Examples

Command Options Arguments Redirection

The command syntax is the underlying grammar used to parse the command line

```
/home/cis90/simben $ hostname
opus.cabrillo.edu

/home/cis90/simben $ uname -o
GNU/Linux

/home/cis90/simben $ ls -ld Poems/
drwxr-xr-x 5 simben90 cis90 4096 Jan 18  2004 Poems/

/home/cis90/simben $ ls -li letter > /dev/null
```

More on redirection in later lessons

What is redirected: NA

Variables

Shell Variables

- A shell variable gives a name to a location in memory where data can be kept during the session. This data value is lost when a session ends.
- The shell variables used to customize the users environment are called *Environment* variables.
- When parsing, the shell will look for a $ followed by a variable name and replace it with the value of the variable.

To show the value of a variable use the **echo** command and precede the variable name with a $

echo $PS1 *shows the current value of the PS1 variable*

To change the value of a variable, use an = sign with no surrounding blanks and no $

PS1="Enter next command: " *sets the PS1 prompt variable*

Shell Environment Variables

These variables are automatically set for you when you log in

Shell Variable	Description
HOME	Users home directory (starts here after logging in and returns with a cd command (with no arguments)
LOGNAME	User's username for logging in with.
PATH	List of directories, separated by :'s, for the Shell to search for commands (which are program files) .
PS1	The prompt string.
PWD	Current working directory
SHELL	Name of the Shell program being used.
TERM	Type of terminal device , e.g. dumb, vt100, xterm, ansi, linux, etc.

Showing common environment variable values

```
/home/cis90/simben $ echo $TERM
xterm
```

Shows your terminal type

```
/home/cis90/simben $ echo $PWD
/home/cis90/simben
```

Shows your current working directory

```
/home/cis90/simben $ echo $PS1
$PWD $
```

Shows your level 1 prompt string

```
/home/cis90/simben $ echo $HOME
/home/cis90/simben
```

Shows your home directory

```
/home/cis90/simben $ echo $SHELL
/bin/bash
```

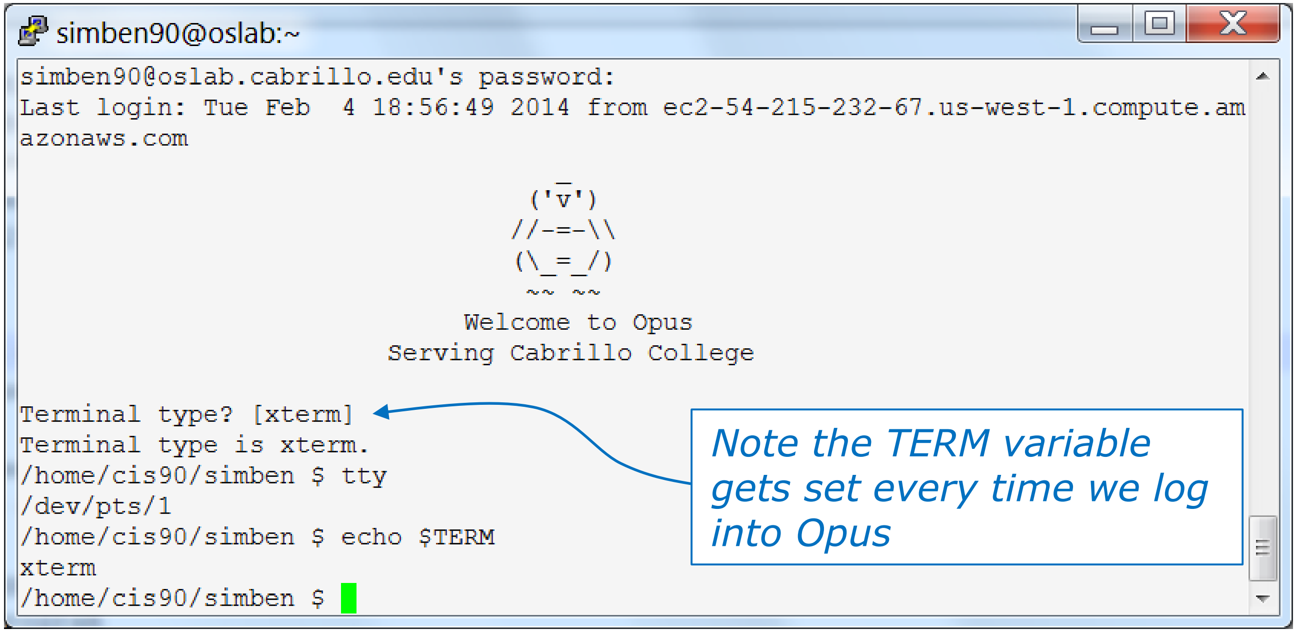
Shows your shell

```
/home/cis90/simben $ echo $PATH
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:
/usr/sbin:/sbin:/home/cis90/simben/../bin:/home/cis90/simben/bin:.
```

Shows the directories making up your path

Note that Terminal type ≠ Terminal device

The TERM variable holds the terminal type which is different than the terminal device



```
simben90@oslab.cabrillo.edu's password:
Last login: Tue Feb  4 18:56:49 2014 from ec2-54-215-232-67.us-west-1.compute.am
azonaws.com

                                   _
                                 ('v')
                                //-=-\\
                                (\_=_/)
                                 ~~ ~~
                             Welcome to Opus
                        Serving Cabrillo College

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $ tty
/dev/pts/1
/home/cis90/simben $ echo $TERM
xterm
/home/cis90/simben $
```

Note the TERM variable gets set every time we log into Opus

*Use **tty** to see terminal device*

*Use **echo $TERM** to see terminal type*

Setting Variable Values

To change the value of a variable, use an = sign with no surrounding blanks and no $

```
/home/cis90/simben $ echo $TERM
xterm
```

Show the current terminal type

```
/home/cis90/simben $ TERM=dumb
/home/cis90/simben $ echo $TERM
dumb
```

Change the terminal type and display the new value

```
/home/cis90/simben $ TERM=xterm
/home/cis90/simben $ echo $TERM
xterm
```

Change the terminal type back to the original value

In Lab 2 you will see what happens when the terminal type is changed

The SHELL variable

```
/home/cis90/simben $ echo $SHELL
/bin/bash
```

The SHELL variable will be set to the name of the shell your are running. Benji is running the bash shell.

```
/home/cis90/simben $ ps
  PID TTY          TIME CMD
 7364 pts/1    00:00:00 bash
 7745 pts/1    00:00:00 ps
```

In Lesson 1 we used the ps command to see the shell being run

```
/home/cis90/simben $ cat /etc/passwd | grep simben
simben90:x:1201:190:Benji Simms:/home/cis90/simben:/bin/bash
```

The shell that is run is determined by the entry in /etc/passwd

Changing the shell prompt

(PS1 variable)

The PS1 variable

```
/home/cis90/simben $ echo $PS1
$PWD $
```

The PS1 variable defines the shell prompt

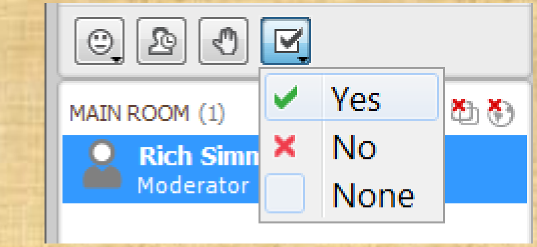
Follow Me

```
/home/cis90/simben $ PS1="By your command > "
By your command > date
Mon Sep  3 17:25:32 PDT 2012
By your command >

By your command > PS1='What can I do for you $LOGNAME? '
What can I do for you simben90? date
Mon Sep  3 17:26:10 PDT 2012
What can I do for you simben90?

What can I do for you simben90? PS1='$PWD $ '
/home/cis90/simben $ date
Mon Feb  3 18:06:30 PST 2014
```

Give me a green check ✓ if you are successful and a red x if stuck on CCC Confer



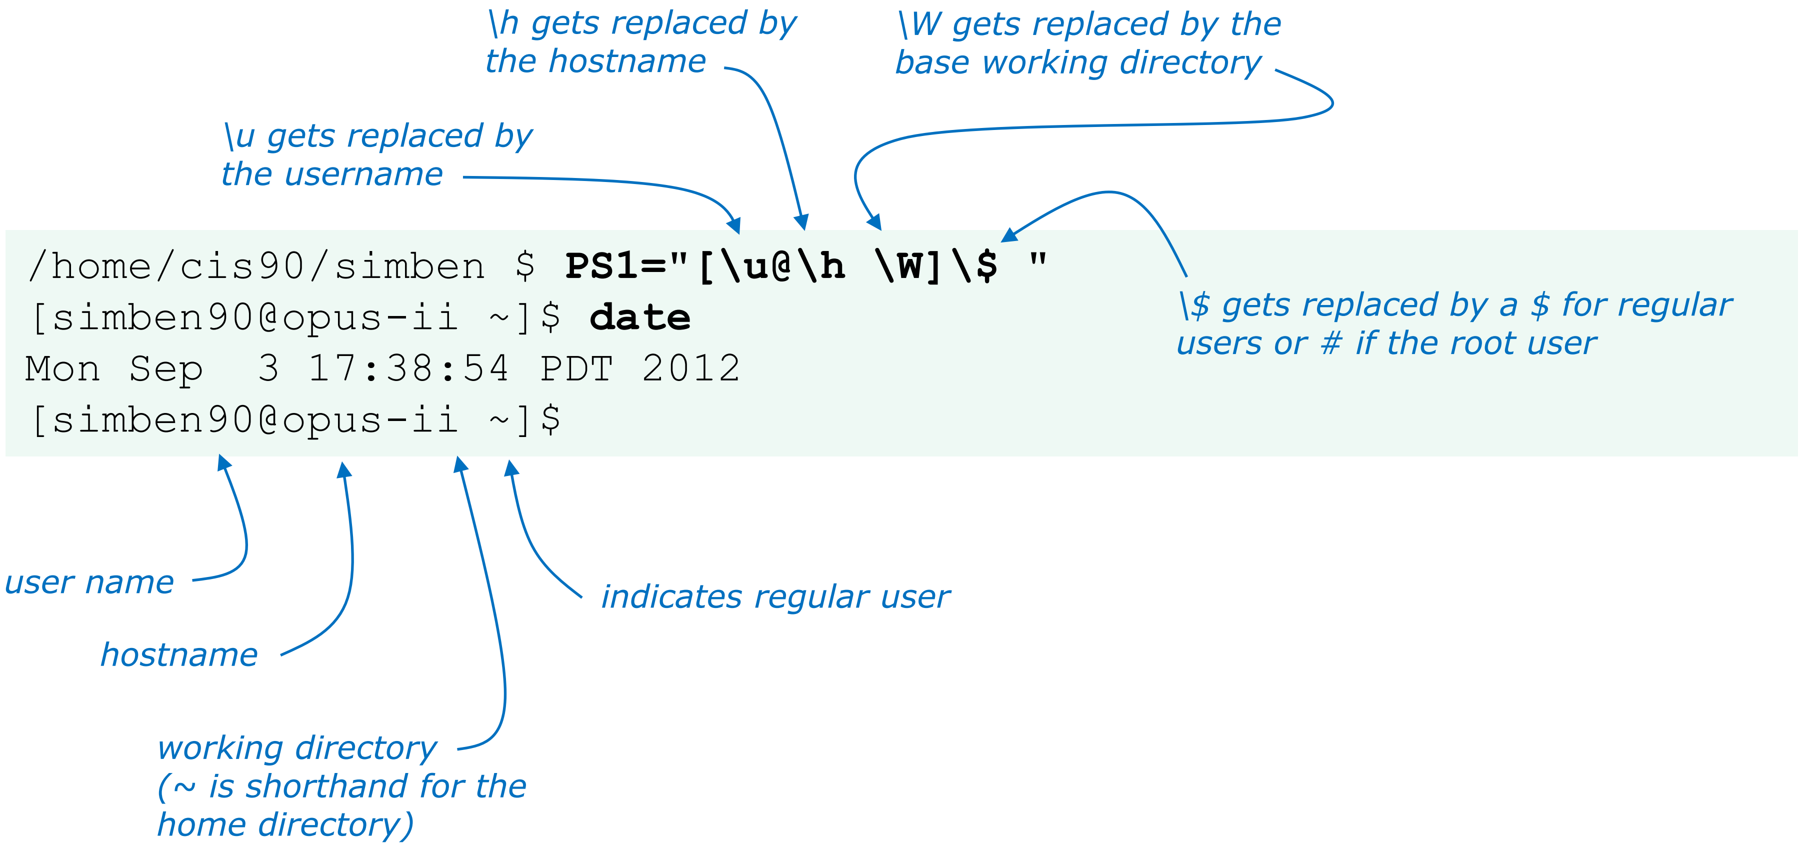
Need a fresh start -- just log out and back in again and your prompt will be back to normal!

Changing the shell prompt

More PS1 prompt examples

Changing the prompt

There are some special \codes you can insert when setting the prompt



\u gets replaced by the username

\h gets replaced by the hostname

\W gets replaced by the base working directory

\$ gets replaced by a $ for regular users or # if the root user

```
/home/cis90/simben $ PS1="[\u@\h \W]\$ "
[simben90@opus-ii ~]$ date
Mon Sep  3 17:38:54 PDT 2012
[simben90@opus-ii ~]$
```

user name

hostname

working directory (~ is shorthand for the home directory)

indicates regular user

Changing the prompt

Special Codes	Meaning
\!	history command number
\#	session command number
\d	date
\h	hostname
\n	new line
\s	shell name
\t	time
\u	user name
\w	entire path of working directory
\W	only working directory
\$	$ or # (for root user)

The PS1 variable (defines the prompt) can be set to any combination of text, variables and these special codes.

Changing the prompt

Prompt string	Result
PS1='$PWD $ '	/home/cis90/simmsben/Poems $
PS1="\w $ "	~/Poems $
PS1="\W $ "	Poems $
PS1="\u@\h $ "	simmsben@opus $
PS1='\u@\h $PWD $ '	simmsben@opus /home/cis90/simmsben/Poems $
PS1='\u@\$HOSTNAME $PWD $ '	simmsben@opus.cabrillo.edu /home/cis90/simmsben/Poems $
PS1='\u \! $PWD $ '	simmsben 825 /home/cis90/simmsben/Poems $
PS1="[\u@\h \W] $ "	[simmsben@opus Poems] $

Important: Use single quotes around variables that change. For example if you use $PWD with double quotes, the prompt will not changes as you change directories! More on this later …

Need a fresh start -- just log out and back in again and your prompt will be back to normal!

Listing the environment variables

Shell (Environment) Variables

env command

*The **env** command shows just the environment variables (a subset of the shell variables)*

```
/home/cis90/simben $ env
HOSTNAME=opus-ii.cabrillo.edu
SELINUX_ROLE_REQUESTED=
TERM=xterm
SHELL=/bin/bash
HISTSIZE=1000
SSH_CLIENT=50.0.68.235 51849 2220

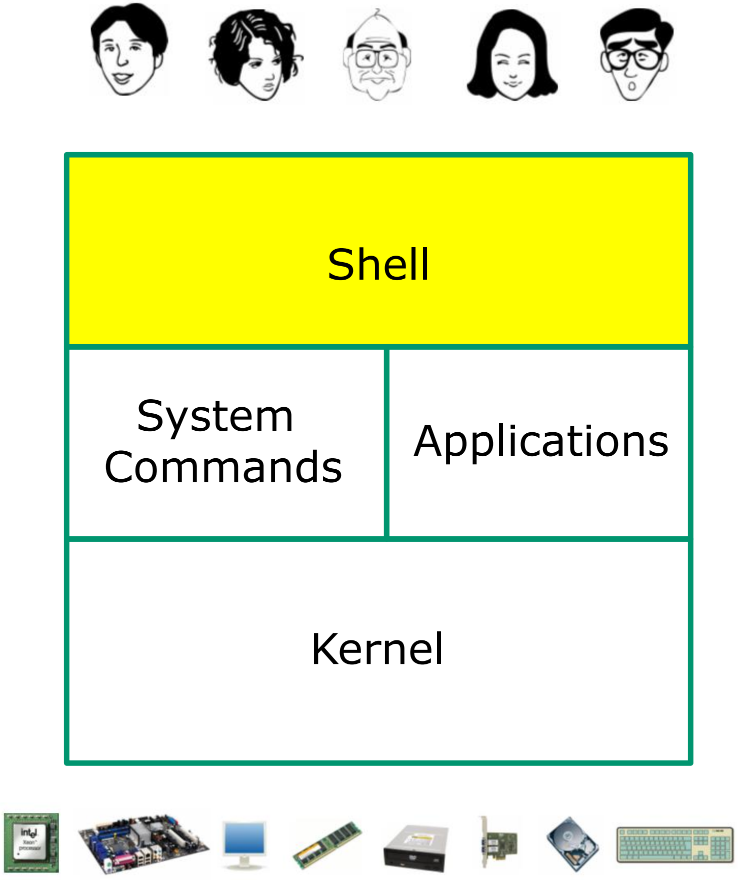
The Shell (six steps)

The Shell



Shell

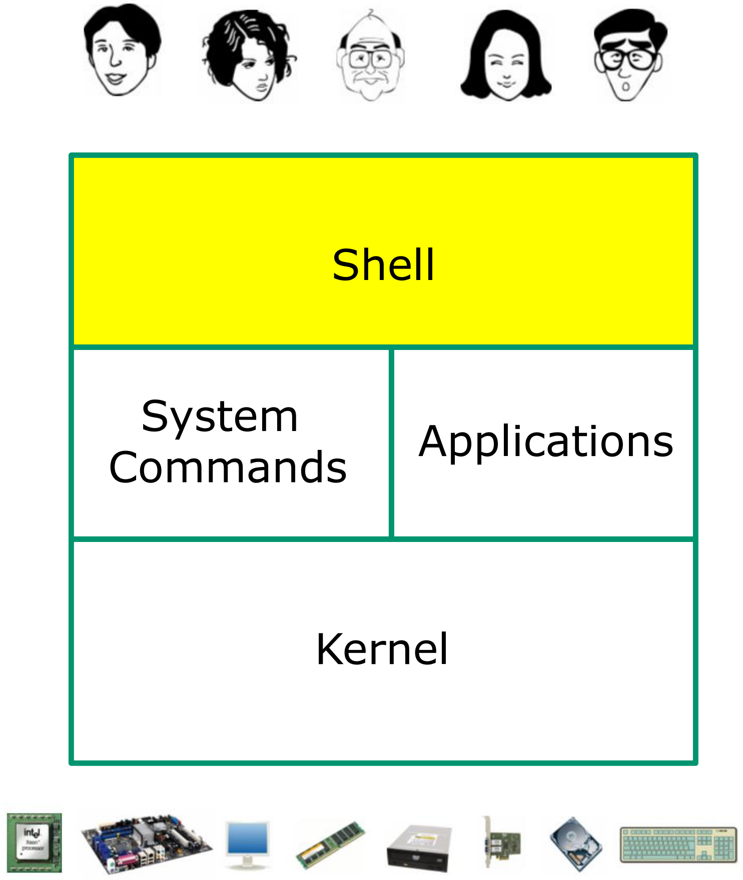
System Commands

Applications

Kernel

- Allows users to interact with the computer via a "**command line**".
- **Prompts** for a command, parses the command, finds the right program and gets that program executed.
- Is called a "**shell**" because it hides the underlying operating system.
- Multiple shell programs are available: **sh** (Bourne shell), **bash** (Bourne Again shell), **csh** (C shell), **ksh** (Korn shell).
- The shell is a **user interface** and a **programming language** (scripts).
- GNOME and KDE desktops could be called **graphical shells**

Life of the Shell



Shell

System Commands

Applications

Kernel

1) Prompt

2) Parse

3) Search

4) Execute

5) Nap

6) Repeat

Life of the Shell

Example:

```
/home/cis90/simben $ ls -lt proposal1 proposal2
-rw-r--r--. 1 simben90 cis90 1074 Aug 26  2003 proposal1
-rw-r--r--. 1 simben90 cis90 2175 Jul 20  2001 proposal2
/home/cis90/simben $
```

Shell Steps

1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

Lets take a deep dive into how a command gets executed.

Note it is always a team effort by both the shell and the command.

Life of the Shell

Shell Steps

1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

1) Prompt user for a command

Example:

The shell begins by outputting the prompt (which is based on the PS1 variable)

```
/home/cis90/simben $ ls -lt proposal1 proposal2
```

Then you type the command

FYI, you can mimic outputting the prompt yourself with these commands:

```
/home/cis90/simben $ echo $PS1
$PWD $
/home/cis90/simben $ echo $PWD $
/home/cis90/simben $
/home/cis90/simben $
```

to show value of PS1 variable

echo the output of the previous command

was output by the echo command above

was output by the shell (the same output)

Life of the Shell

2) Parse command user typed

Shell Steps

1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

Example:

```
ls -lt proposal1 proposal2
```

- Command = ls
- 2 Options = l, t
- 2 Arguments = proposal1, proposal2
- No Redirection

During the parse step the shell identifies all options & arguments, handles any metacharacters and redirection

Life of the Shell

Shell Steps
1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

3) Search path for the program to run

```
ls -lt proposal1 proposal2
```

Use this command to see the path directories (separated by :'s) on your path

```
/home/cis90/simben $ echo $PATH
/usr/lib/qt-3.3/bin:/usr/local/bin:/bin:/usr/bin:/usr/local/sbin:/usr/sbin
:/sbin:/home/cis90/simben/../bin:/home/cis90/simben/bin:.
```

*The shell will search each directory in order for an **ls** command*

```
/usr/lib/qt-3.3/bin  no ls command found here
/usr/local/bin       no ls command found here
/bin                 YES! – an ls command is in the /bin directory
/usr/bin
/usr/local/sbin
/usr/sbin
/sbin
/home/cis90/simben/../bin
/home/cis90/simben/bin
     .
```

Try mimicking what the shell does to search for ls:

```
/home/cis90/simben $ ls /usr/lib/qt-3.3/bin/ls
ls: cannot access /usr/lib/qt-3.3/bin/ls: No
such file or directory

/home/cis90/simben $ ls /usr/local/bin/ls
ls: cannot access /usr/local/bin/ls: No such
file or directory

/home/cis90/simben $ ls /bin/ls
/bin/ls
```

Note: If the shell cannot find the command on the path it will output "command not found"

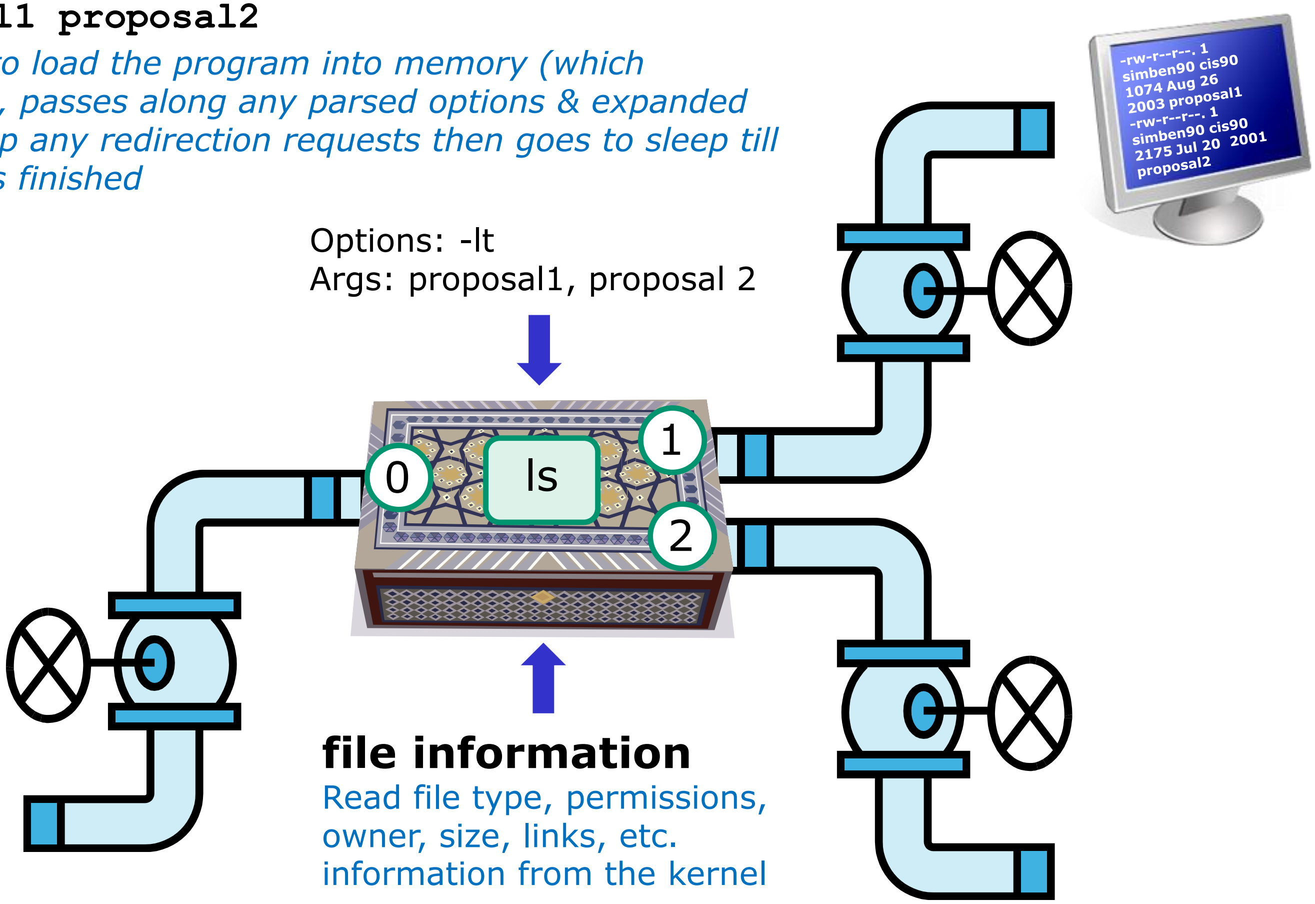
Life of the Shell

Shell Steps
1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

4) Execute the command

```
ls -lt proposal1 proposal2
```

Invokes the kernel to load the program into memory (which becomes a process), passes along any parsed options & expanded arguments, hooks up any redirection requests then goes to sleep till the new process has finished



```
-rw-r--r--. 1
simben90 cis90
1074 Aug 26
2003 proposal1
-rw-r--r--. 1
simben90 cis90
2175 Jul 20  2001
proposal2
```

Options: -lt
Args: proposal1, proposal 2

file information
Read file type, permissions, owner, size, links, etc. information from the kernel

Life of the Shell

5) Nap while the command (process) runs to completion

(The shell, itself a loaded process, goes into the sleep state and waits till the command process is finished)

```
/home/cis90/simben $ ls -lt proposal1 proposal2
-rw-r--r--. 1 simben90 cis90 1074 Aug 26  2003 proposal1
-rw-r--r--. 1 simben90 cis90 2175 Jul 20  2001 proposal2
```

The shell sleeps while the ls process outputs these two lines

Shell Steps

1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

Life of the Shell

6) And do it all over again
… go to step 1

Shell Steps
1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

Life of the Shell

A

```
/home/cis90/simben $ Ls -lt proposal1 proposal2
-bash: Ls: command not found
```

What's wrong?
Who output the error?

B

```
/home/cis90/simben $ ls -lt proposal1 proposal5
ls: cannot access proposal5: No such file or directory
-rw-r--r--. 1 simben90 cis90 1074 Aug 26  2003 proposal1
```

What's wrong?
Who output the error?

C

```
/home/cis90/simben $ ls -lw proposal1 proposal2
ls: invalid line width: proposal1
```

What's wrong?
Who output the error?

D

```
/home/cis90/simben $ ls -lt proposal1proposal2
ls: cannot access proposal1proposal2: No such file or directory
```

What's wrong?
Who output the error?

E

```
/home/cis90/simben $ ls-lt proposal1 proposal2
-bash: ls-lt: command not found
```

What's wrong?
Who output the error?

A) Capital L typo, bash
B) Non-existent proposal5, ls
C) incomplete w option, ls
D) No space between arguments, ls;
E) No space after command, bash

Meta-characters

Metacharacters

When parsing, the shell gives special meaning to metacharacters

" - use double quotes to preserve blanks and allow variable expansion

' - use single quotes to preserve blanks and block variable expansion

$ - use to show the value rather than the name of a variable

; - allows multiple commands on one line

<enter key> - The invisible newline control character marking the end of a command

= - use to set variables to new values

\ - removes (escapes) the special powers of a metacharacter

Other metacharacters we will learn about later include:
*?, *, <, >, >>, !, |, [], {}, &, && and ||*

Metacharacters - quotes

- Double " quotes allow variable expansion
- Single ' quotes block variable expansion
- Both double and single quotes preserve blanks

```
/home/cis90/simben $ echo I am               $LOGNAME      (3 arguments)
I am simben90  Extra blanks ignored, variable expanded
```

```
/home/cis90/simben $ echo "I am               $LOGNAME"    (1 argument)
I am               simben90  Extra blanks preserved, variable expanded to show value
```

```
/home/cis90/simben $ echo 'I am               $LOGNAME'    (1 argument)
I am               $LOGNAME  Extra blanks preserved, variable expansion blocked
```

Double quotes called weak quotes because they allow the shell to expand variables. Single quotes are called strong quotes because they block the shell from expanding variables.

Metacharacters - quotes

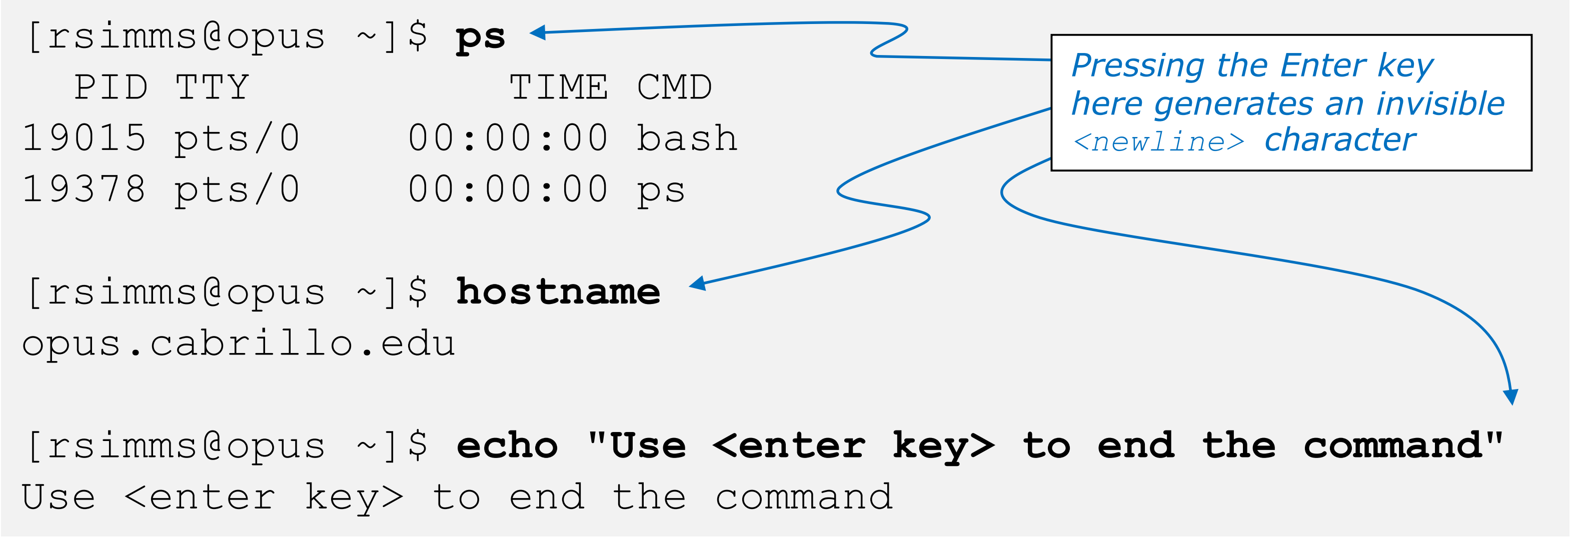
```
/home/cis90/simben $ echo '"double quotes"'
"double quotes"
```

```
/home/cis90/simben $ echo "'single quotes'"
'single quotes'
```

Tip: single quotes can be used to output double quotes and vice-versa

Metacharacters - <enter key>

<enter key> - The invisible *newline* control character marking the end of a command



```
[rsimms@opus ~]$ ps
  PID TTY          TIME CMD
19015 pts/0    00:00:00 bash
19378 pts/0    00:00:00 ps

[rsimms@opus ~]$ hostname
opus.cabrillo.edu

[rsimms@opus ~]$ echo "Use <enter key> to end the command"
Use <enter key> to end the command
```

Pressing the Enter key here generates an invisible `<newline>` *character*

Metacharacters - \ (backslash)

The back slash \ removes (escapes) the special powers of a metacharacter

```
[rsimms@opus-ii ~]$ echo a b c d e f
a b c d e f

[rsimms@opus-ii ~]$ echo a b c \
> d e f
a b c d e f
```

Escape the invisible newline <enter key> which marks the end of a command

```
[rsimms@opus-ii ~]$ echo $PS1
[\u@\h \W]\$

[rsimms@opus-ii ~]$ echo \$PS1
$PS1
```

Escape the $ (which shows the value of the variable)

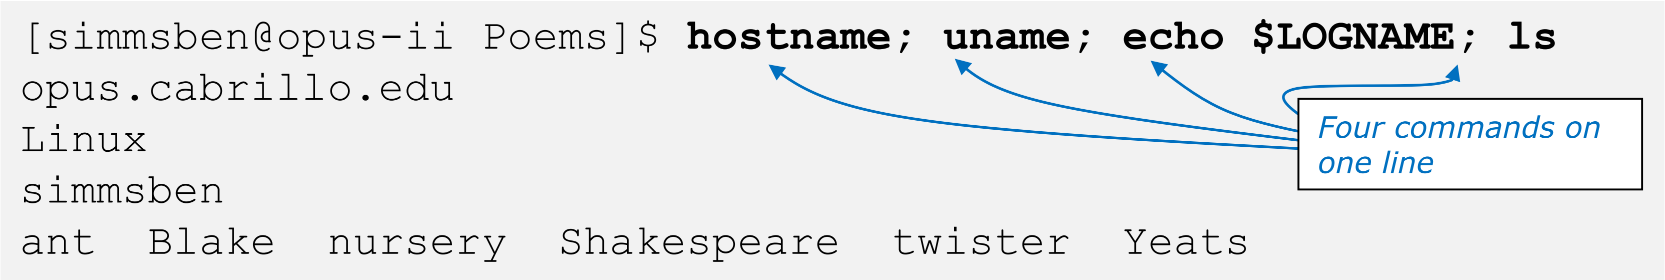
```
[rsimms@opus-ii ~]$ echo "Hello World"
Hello World

[rsimms@opus-ii ~]$ echo \"Hello World\"
"Hello World"
```

Escape the double quote marks

Metacharacters - ; (semi-colon)

The semi-colon ; allows multiple commands on one line



```
[simmsben@opus-ii Poems]$ hostname; uname; echo $LOGNAME; ls
opus.cabrillo.edu
Linux
simmsben
ant  Blake  nursery  Shakespeare  twister  Yeats
```

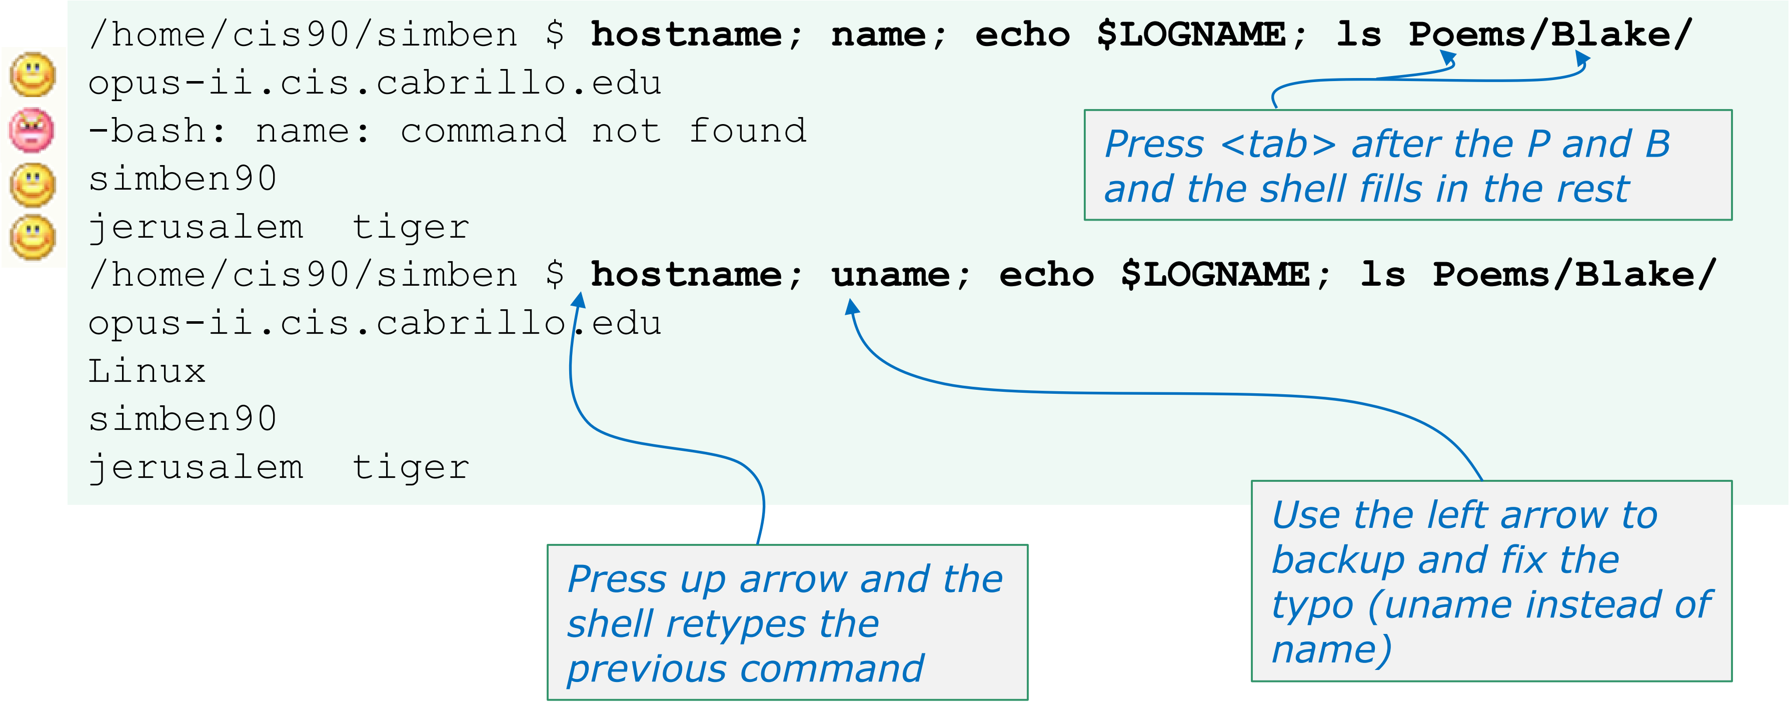
Four commands on one line

Shortcuts

More on the Command Line

Handy Shortcuts

- Use up and down arrows to “retype” previous commands
- Left and right arrow for editing current command
- Use <tab> to complete filenames automatically



```
/home/cis90/simben $ hostname; name; echo $LOGNAME; ls Poems/Blake/
opus-ii.cis.cabrillo.edu
-bash: name: command not found
simben90
jerusalem  tiger
/home/cis90/simben $ hostname; uname; echo $LOGNAME; ls Poems/Blake/
opus-ii.cis.cabrillo.edu
Linux
simben90
jerusalem  tiger
```

Press <tab> after the P and B and the shell fills in the rest

Press up arrow and the shell retypes the previous command

Use the left arrow to backup and fix the typo (uname instead of name)

Life without a path

-bash: *xxxx*: command not found

Don't get mad, just fix your path!

Life without a path

https://simms-teach.com/docs/cis90/cis90-life-with-no-path.pdf

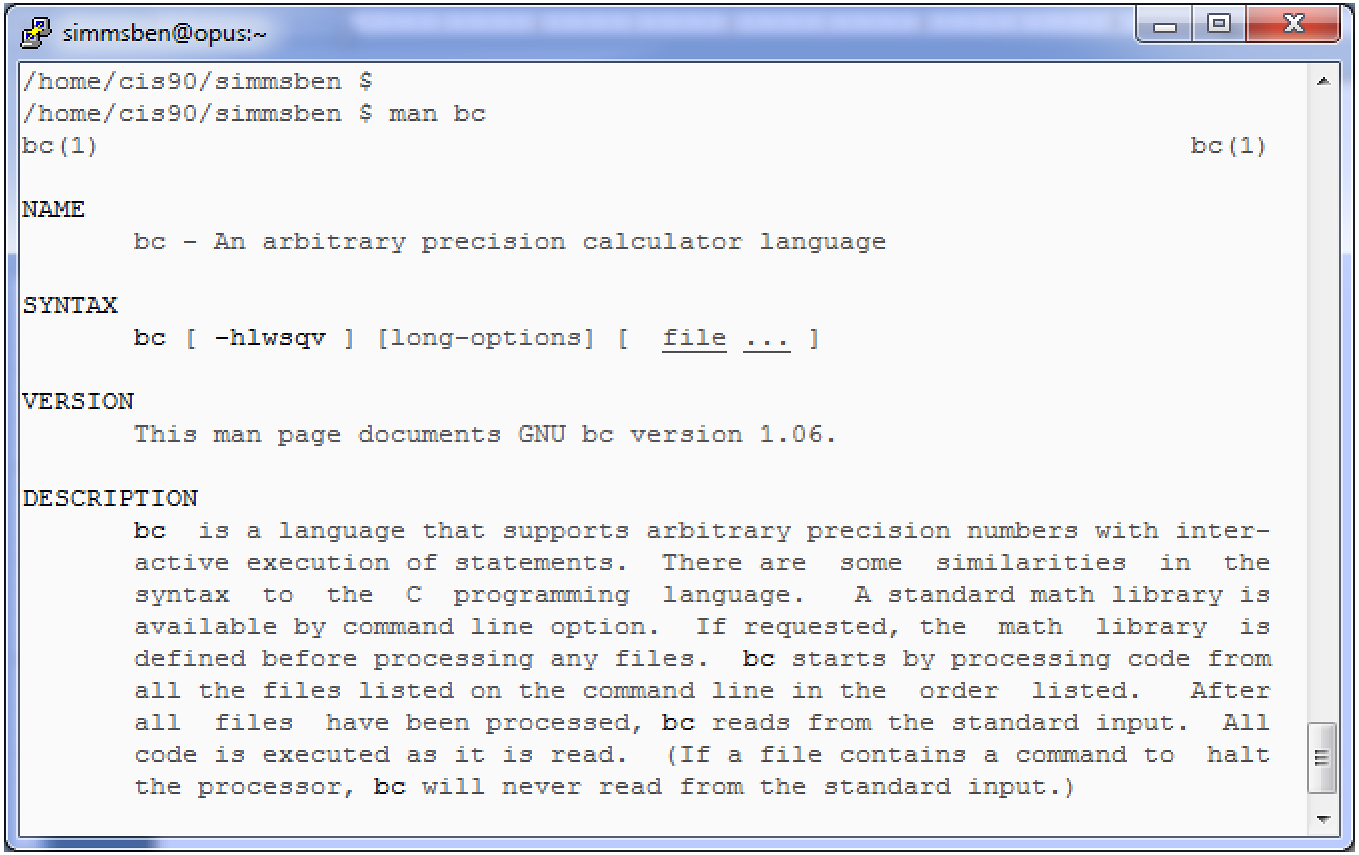
Need a fresh start -- just log out and back in again and your path will be back to normal!

Docs

Using man (manual) pages

*Type the **man** command followed by the name of the command you want documentation on.*

Example: **man bc**



```
/home/cis90/simmsben $
/home/cis90/simmsben $ man bc
bc(1)                                                                  bc(1)

NAME
       bc - An arbitrary precision calculator language

SYNTAX
       bc [ -hlwsqv ] [long-options] [  file ... ]

VERSION
       This man page documents GNU bc version 1.06.

DESCRIPTION
       bc  is a language that supports arbitrary precision numbers with inter-
       active execution of statements.  There are  some  similarities  in  the
       syntax  to  the  C  programming  language.   A standard math library is
       available by command line option.  If requested, the  math  library  is
       defined before processing any files.  bc starts by processing code from
       all the files listed on the command line in the  order  listed.   After
       all  files  have been processed, bc reads from the standard input.  All
       code is executed as it is read.  (If a file contains a command to  halt
       the processor, bc will never read from the standard input.)
```

Use these keys to scroll

Use q key to quit

Using Google

Do a Google search on "linux xxx command" where xxx is the command you want documentation for.

Example: **google** linux bc command

The Linux Information Project

Welcome to The Linux Information Project (LINFO). This project is dedicated to providing high quality, comprehensive and easily accessible information about Linux and other free software. (New to Linux? Start here.)

New on This Site:
- October 27: root Definition page updated.
- October 19: Hard Link Definition page added.
- October 12: Characters: A Brief Introduction page updated.
- October 03: Byte Definition page updated.
- September 27: PDP-7 Definition page updated.
- September 24: The umount Command page added.
- September 20: The head Command page updated.

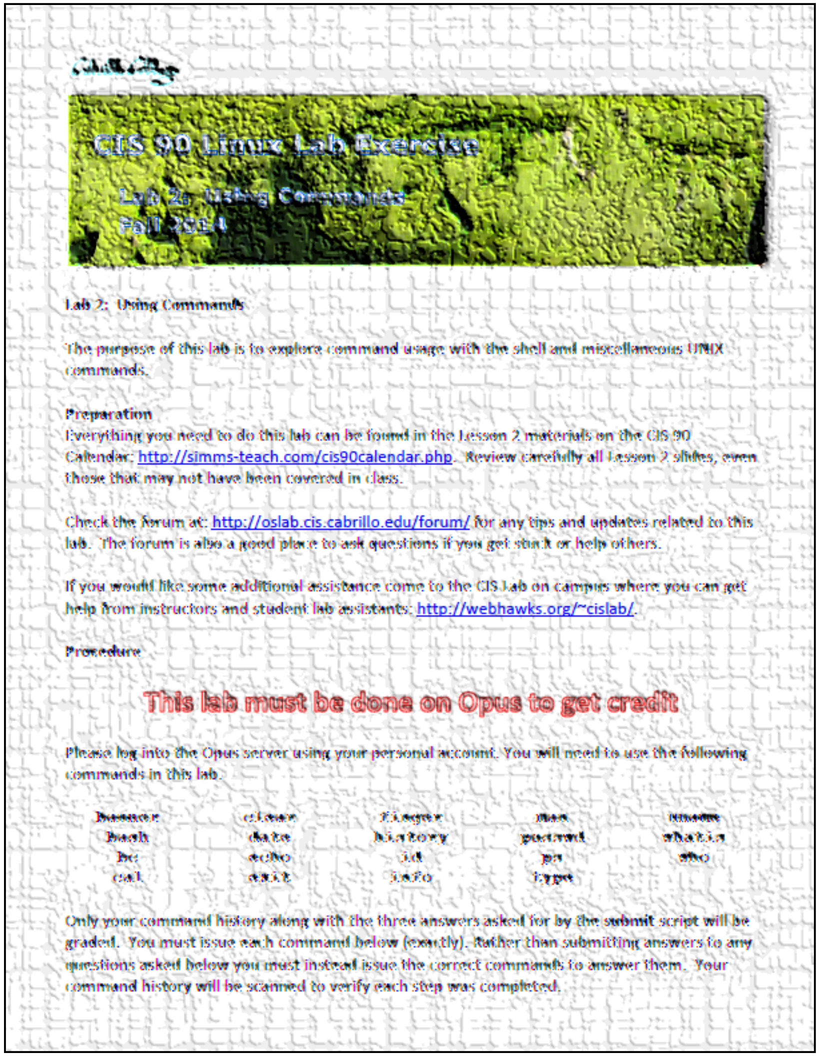
The Linux Documentation and Information Projects

Assignment

Lab 2 - Using Commands



CIS 90 Linux Lab Exercise

Lab 2: Using Commands

Fall 2014

Lab 2: Using Commands

The purpose of this lab is to explore command usage with the shell and miscellaneous UNIX commands.

Preparation

Everything you need to do this lab can be found in the Lesson 2 materials on the CIS 90 Calendar: http://simms-teach.com/cis90calendar.php. Review carefully all Lesson 2 slides, even those that may not have been covered in class.

Check the forum at: http://oslab.cis.cabrillo.edu/forum/ for any tips and updates related to this lab. The forum is also a good place to ask questions if you get stuck or help others.

If you would like some additional assistance come to the CIS Lab on campus where you can get help from instructors and student lab assistants: http://webhawks.org/~cislab/.

Procedure

This lab must be done on Opus to get credit

Please log into the Opus server using your personal account. You will need to use the following commands in this lab.

banner
bash
bc
cal
clear
date
echo
exit
finger
history
id
info
man
passwd
ps
type
uname
whatis
who

Only your command history along with the three answers asked for by the **submit** script will be graded. You must issue each command below (exactly). Rather than submitting answers to any questions asked below you must instead issue the correct commands to answer them. Your command history will be scanned to verify each step was completed.

- This lab MUST be done on Opus to get credit
- You don't need to turn in answers for steps 1-22. However I will check your command history to verify you entered the correct commands to answer those questions.
- There are three questions to answer on the **submit** script.

Wrap up

New commands:

apropos	- search for string in whatis database
bc	- binary calculator
cat	- print file(s)
echo	- print text
env	- show shell environment variables
info	- online documentation with hot links
file	- show file information
ls	- show directory contents
passwd	- change password
set	- show (or set) shell variables
type	- show command location in path
man	- manual page for a command
whatis	- command summary

New Files and Directories:

/etc/passwd	- user accounts
/etc/shadow	- encrypted passwords
/bin	- directory of commands
/sbin	- directory of superuser commands
/usr/bin	- directory of commands, tools and utilities
/usr/sbin	- directory of superuser commands, tools and utilities

Next Class

Assignment: Check Calendar Page on web site to see what is due next week.

Lab #2

Quiz questions for next class:

- Which four directories typically contain the majority of the UNIX/Linux system commands?
- How do you show your path?
- What command would allow you to view the manual page for the who command?

Running Arya VM in VLab

Terminals

Hardware Terminals

TELETYPE CORPORATION SUBSIDIARY OF Western Electric Company CHICAGO, U.S.A.

Teletype (TTY)

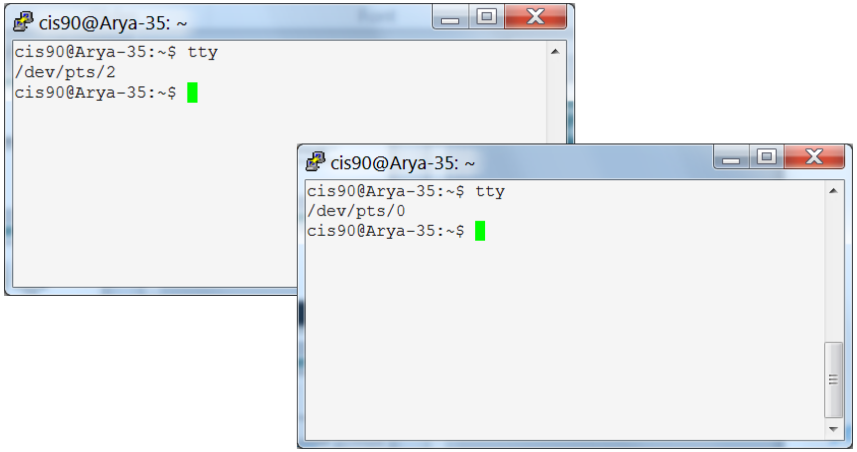
VT100

digital

Terminals were used in the old days to interact with "minicomputers" and "mainframe" computers.

Today we use **terminal emulators** instead that are software programs.

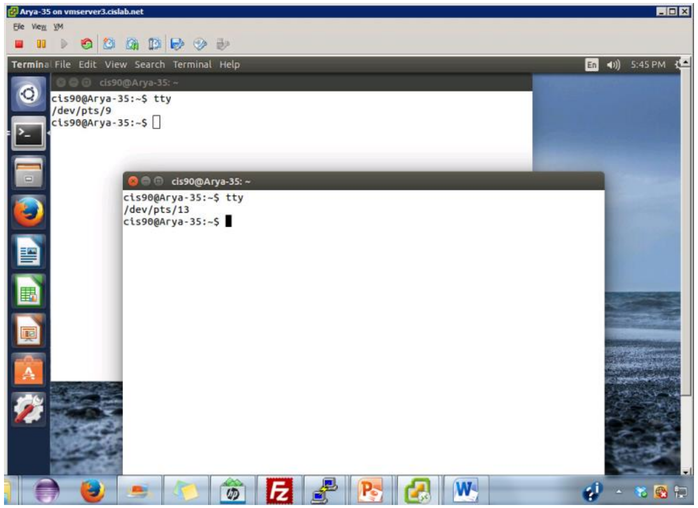
Software Terminals



```
cis90@Arya-35:~$ tty
/dev/pts/2
cis90@Arya-35:~$
```

```
cis90@Arya-35:~$ tty
/dev/pts/0
cis90@Arya-35:~$
```

Terminal emulators like PuTTY (with scroll bars, colors, customizable backgrounds, fonts and sizes) for Windows



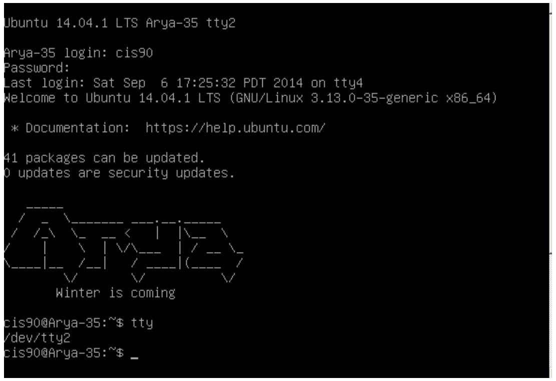
Arya-35 on vmserver3.cislab.net
File View VM
Terminal File Edit View Search Terminal Help
En
5:45 PM
cis90@Arya-35: ~

```
cis90@Arya-35:~$ tty
/dev/pts/9
cis90@Arya-35:~$
```

```
cis90@Arya-35:~$ tty
/dev/pts/13
cis90@Arya-35:~$
```

Graphical terminals (with scroll bars, colors, customizable backgrounds, fonts and sizes) built into Linux/Mac computers

Virtual terminals
(use ctrl-alt-fn)
Bare bones, no scroll bars,
also called a console



```

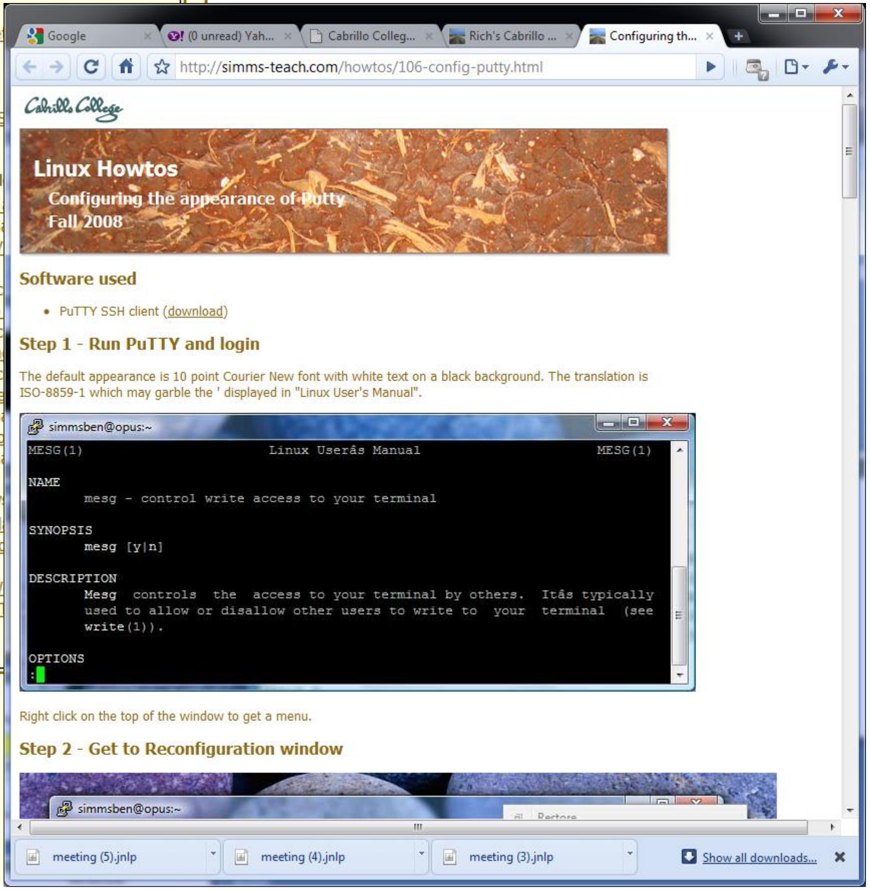
There is a Howto on the Resource page to walk you through customizing Putty



Linux Howtos

Configuring the appearance of Putty
Fall 2008

Software used

- PuTTY SSH client (download)

Step 1 - Run PuTTY and login

The default appearance is 10 point Courier New font with white text on a black background. The translation is ISO-8859-1 which may garble the ' displayed in "Linux User's Manual".

```
simmsben@opus:~
MESG(1)                    Linux Userâs Manual                    MESG(1)

NAME
       mesg - control write access to your terminal

SYNOPSIS
       mesg [y|n]

DESCRIPTION
       Mesg  controls  the  access to your terminal by others.  Itâs typically
       used to allow or disallow other users to write to  your  terminal  (see
       write(1)).

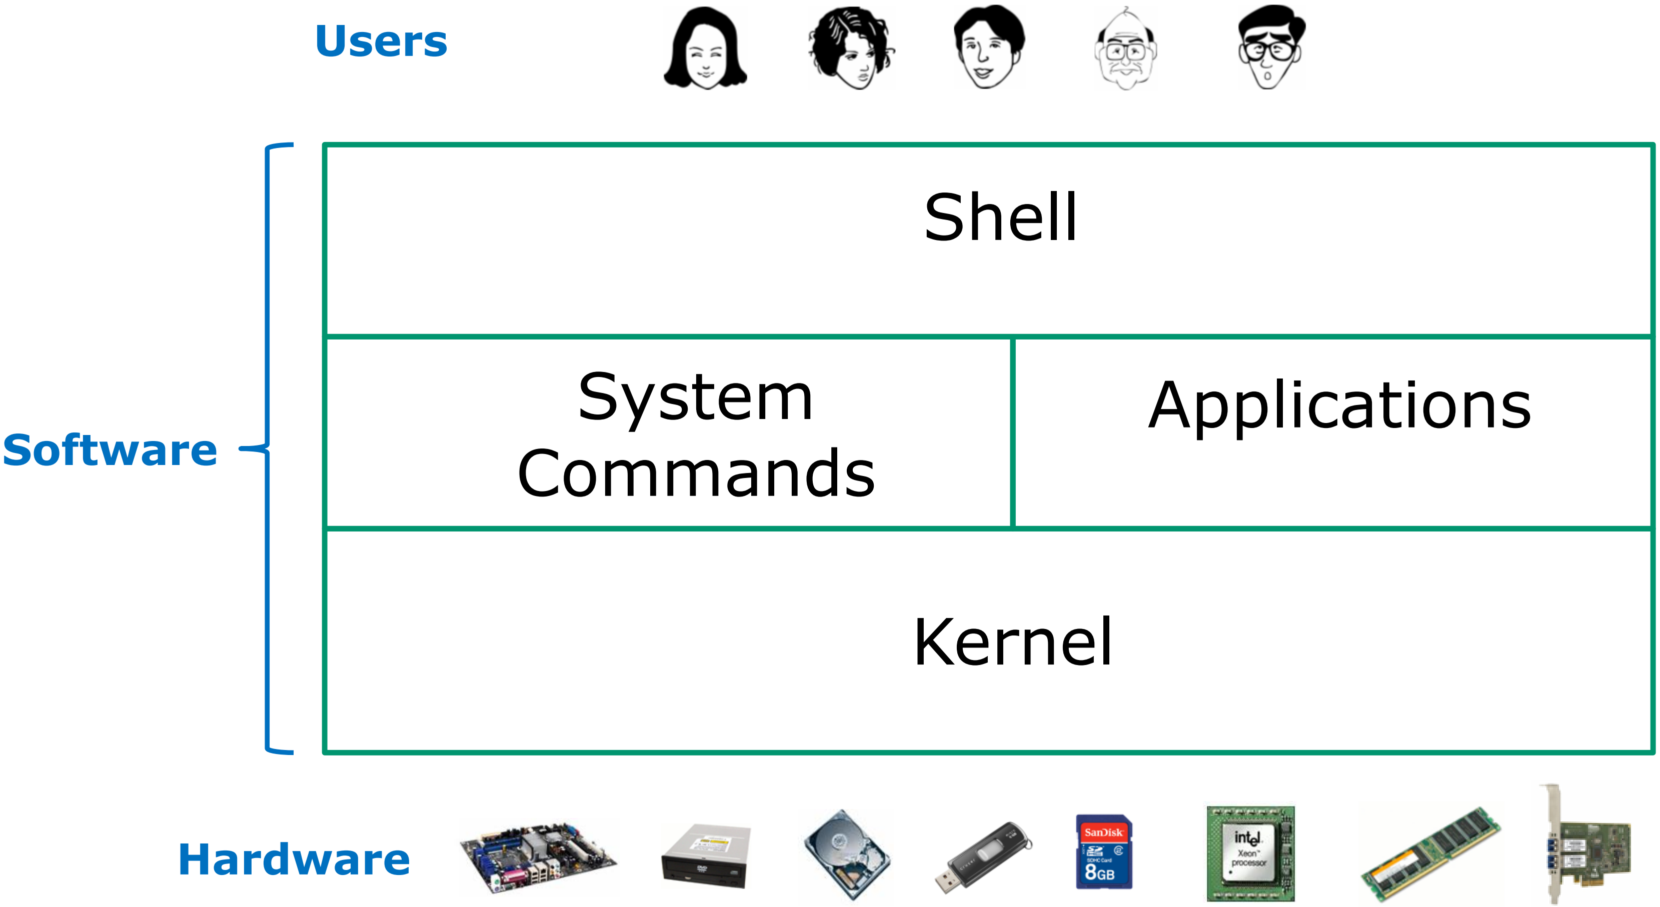
OPTIONS
:
```

Right click on the top of the window to get a menu.

Step 2 - Get to Reconfiguration window

Lesson 1 Review

UNIX/Linux Architecture
Simplified View - Four Major Components



Users

Software

Shell

System Commands

Applications

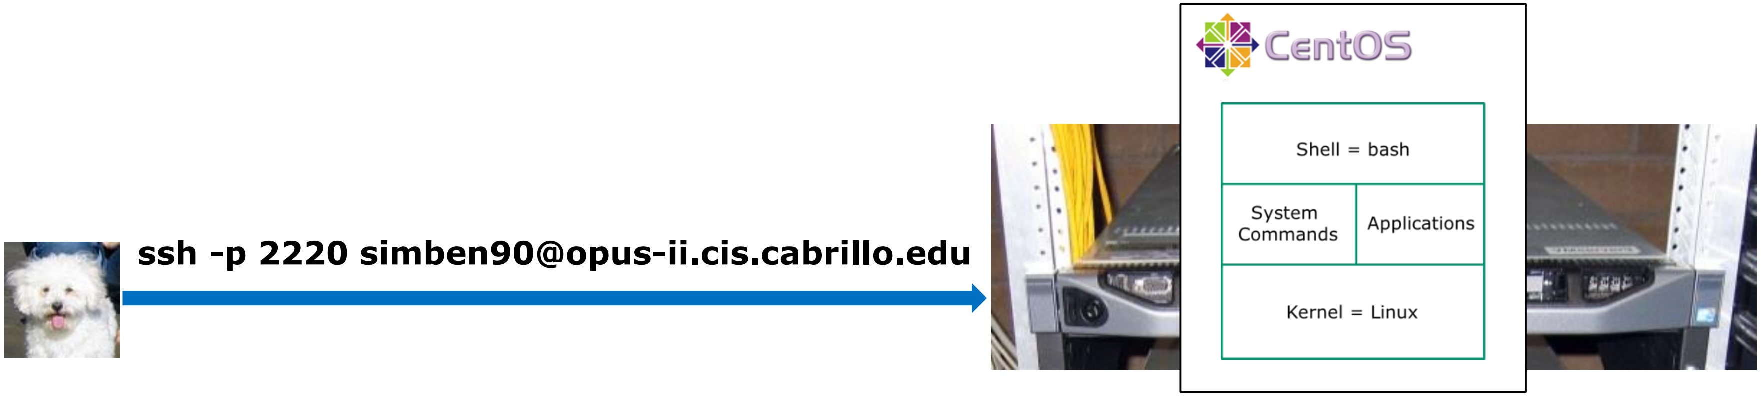
Kernel

Hardware

The Lesson 1 commands for your toolbox

cal	*Prints calendars*
date	*Shows the time and date*
clear	*Clears the screen*
exit	*Exits login session*
history	*Shows commands used previously*
id	*Shows your username and UID (and more)*
ps	*Shows your processes (including the name of the shell)*
ssh	*For connecting and logging into a remote computer*
hostname	*Shows the name of the computer being used*
uname	*Shows name of the operating system kernel*
cat /etc/issue	*Shows name of the "distro" (distribution)*
tty	*Shows which terminal device is being used*
who	*Shows all users who are logged in and from where*
who am i	*Like **who**, but only shows your login session*

"Name" Terminology



ssh -p 2220 simben90@opus-ii.cis.cabrillo.edu

CentOS

Shell = bash

System Commands

Applications

Kernel = Linux

Various "names" bandied about:	**To view:**
User's first and last **name**: Benji Simms	*/etc/passwd*
user**name** = simben90	**id**
name of terminal device used = /dev/pts/2	**tty**
(terminal type = xterm)	**echo $TERM**
host**name** = opus-ii.cis.cabrillo.edu	**hostname**
Name of distro = CentOS	*/etc/*-release*
Name of shell = bash	**ps**
Name of kernel = Linux	**uname**

Terminals types and devices

```

                                 ('v')
                                //-=-\\
                                (\_=_/)
                                 ~~ ~~

                             Welcome to Opus
                        Serving Cabrillo College

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $ tty
/dev/pts/3
```

Hit Enter to accept

*The terminal type is **xterm***

*The terminal device for this session is **/dev/pts/3***

The **terminal type** is not the same as the **terminal device**

How can I print a calendar?

```
/home/cis90/simben $ cal
   September 2012
Su Mo Tu We Th Fr Sa
                   1
 2  3  4  5  6  7  8
 9 10 11 12 13 14 15
16 17 18 19 20 21 22
23 24 25 26 27 28 29
30
```

*The **cal** command*

```
/home/cis90/simben $ cal 9 2001
   September 2001
Su Mo Tu We Th Fr Sa
                   1
 2  3  4  5  6  7  8
 9 10 11 12 13 14 15
16 17 18 19 20 21 22
23 24 25 26 27 28 29
30
/home/cis90/simben $
```

*Month and year **arguments***

A command can have arguments

What is the current time and date?

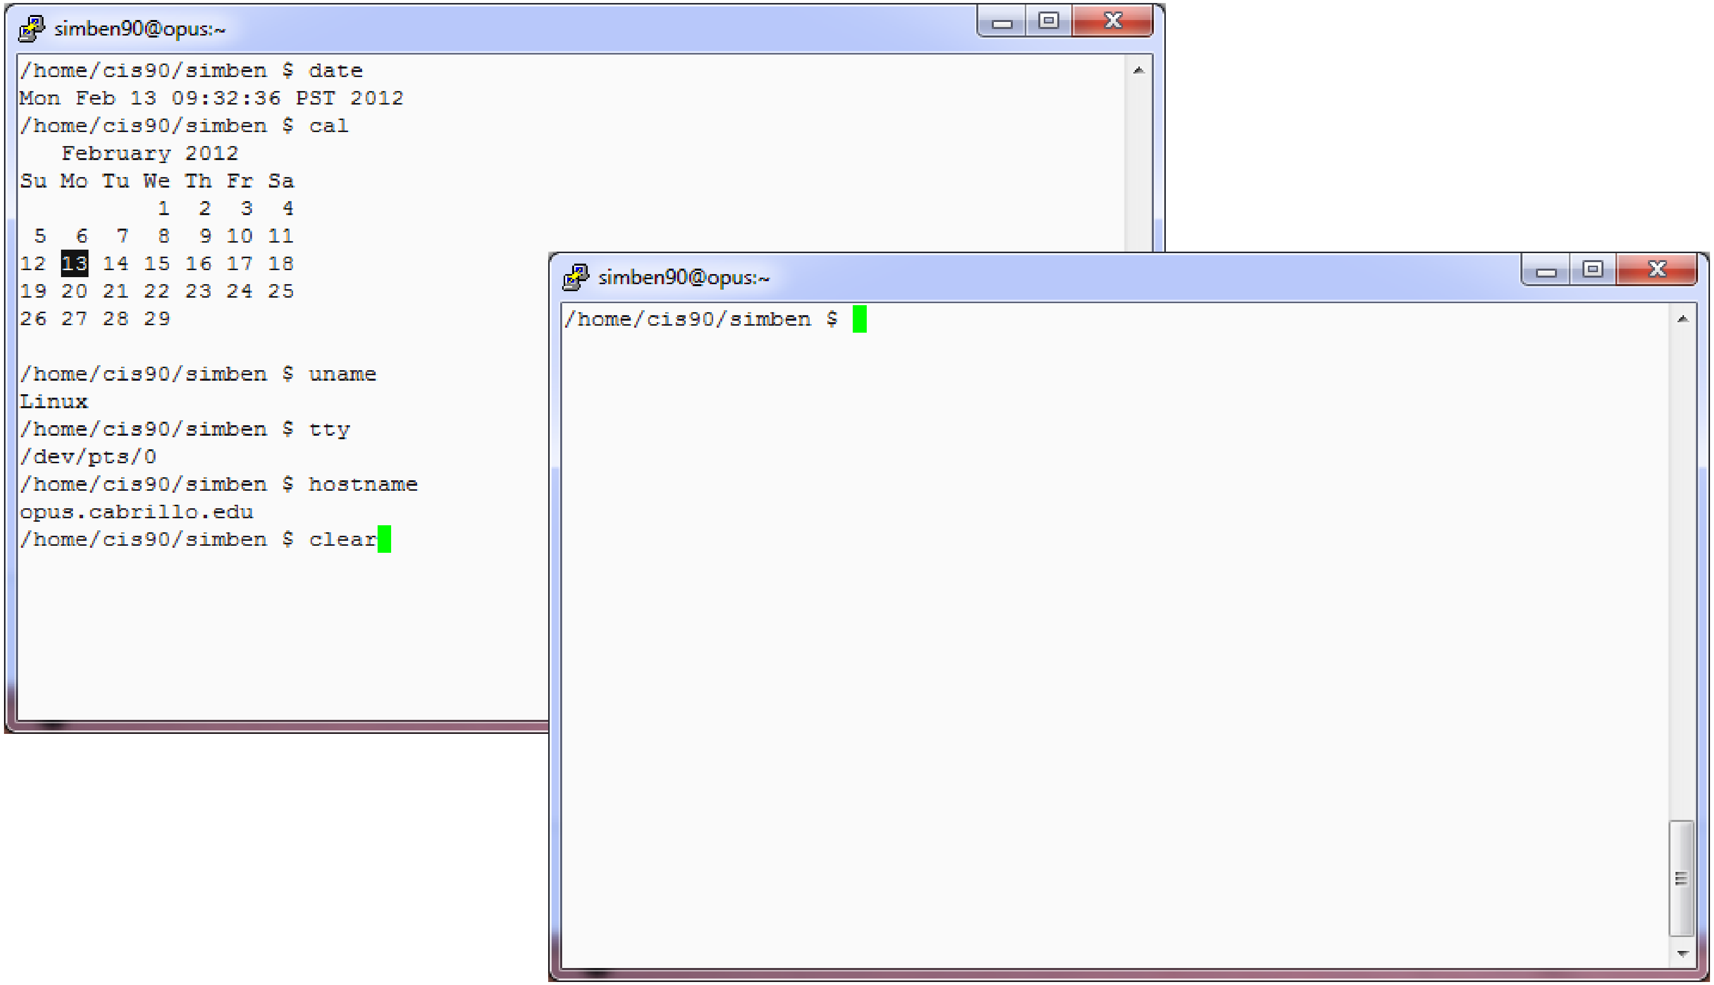
The shell "prompt"

The "command"

```
/home/cis90/simben $ date
Sat Sep  1 14:03:33 PDT 2012
/home/cis90/simben $
```

The prompt is output by the shell, you type the command

How do I clear the screen?



```
/home/cis90/simben $ date
Mon Feb 13 09:32:36 PST 2012
/home/cis90/simben $ cal
   February 2012
Su Mo Tu We Th Fr Sa
          1  2  3  4
 5  6  7  8  9 10 11
12 13 14 15 16 17 18
19 20 21 22 23 24 25
26 27 28 29

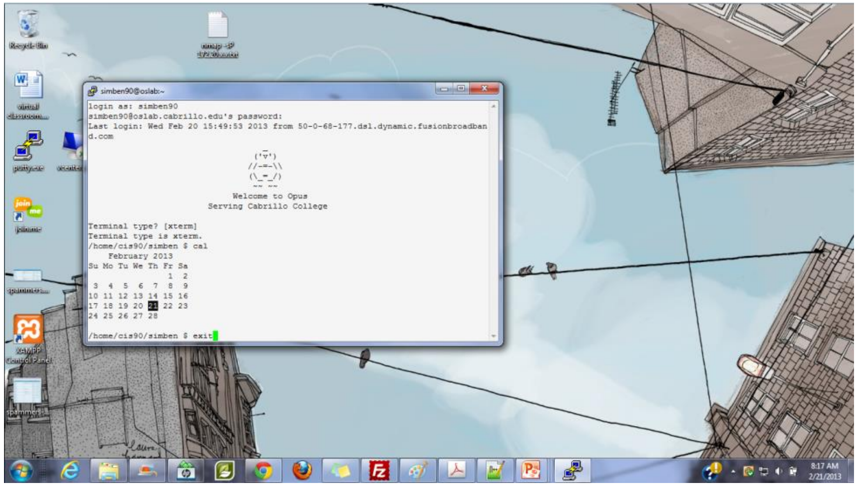
/home/cis90/simben $ uname
Linux
/home/cis90/simben $ tty
/dev/pts/0
/home/cis90/simben $ hostname
opus.cabrillo.edu
/home/cis90/simben $ clear
```

```
/home/cis90/simben $
```

The **clear** command scrolls previous commands out of sight

How do I end this login session?

before **exit**



```
login as: simben90

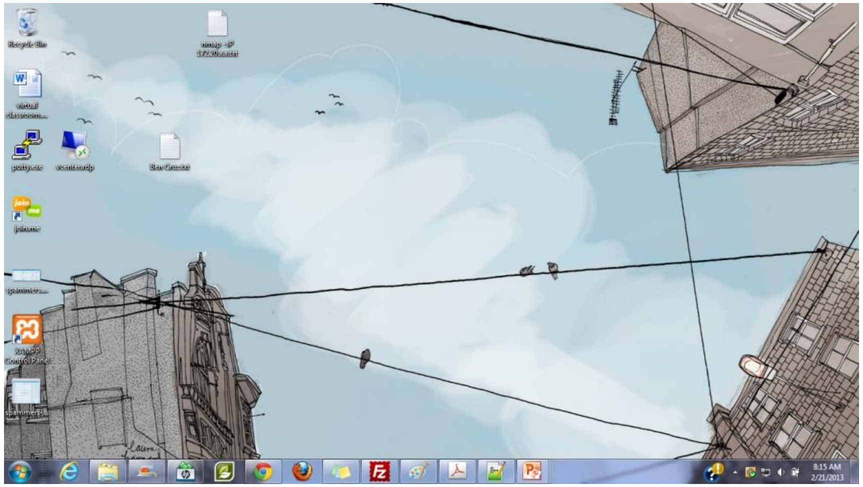
                             Welcome to Opus
                         Serving Cabrillo College

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $ cal
    February 2013
Su Mo Tu We Th Fr Sa
                1  2
 3  4  5  6  7  8  9
10 11 12 13 14 15 16
17 18 19 20 21 22 23
24 25 26 27 28

/home/cis90/simben $ exit
```

after **exit**



The **exit** command ends the session and the terminal window disappears ... POOF!

Viewing your command history

```
/home/cis90/simben $ history
    1  hostname
    2  exit
    3  who
    4  who -q
    5  ps -e
< snipped >
  177  cal 9 2001
  178  exit
  179  who
  180  cal
  181  tty
  182  uname
  183  ps
  184  id
  185  exit
  186  history
/home/cis90/simben $
```

*The **history** command outputs the commands used previously … even from previous login sessions*

Tip: Use the “Up Arrow” key to quickly re-issue a previous command!

What is the UID (User ID) for my account or other accounts?

```
/home/cis90/simben $ id
uid=1001(simben90) gid=190(cis90) groups=190(cis90),100(users)
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023

/home/cis90/simben $ id milhom90
uid=1002(milhom90) gid=190(cis90) groups=190(cis90),100(users)

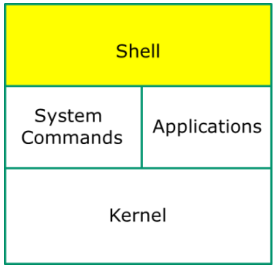
/home/cis90/simben $ id simben90
uid=1001(simben90) gid=190(cis90) groups=190(cis90),100(users)
```

Usernames

UID's (user ID numbers)

We are all just numbers to the Linux kernel

What shell am I using?



Shell

System Commands

Applications

Kernel

```
/home/cis90/simben $ ps
  PID TTY          TIME CMD
28994 pts/0    00:00:00 bash
29093 pts/0    00:00:00 ps
```

Process ID numbers

Terminal device being used

*the shell is sleeping and waiting for **ps** command to finish*

***ps** command is running as it outputs this*

The **ps** command outputs the current processes you own including the shell program you are using

How do I log into another computer system?

*Method 1: The **ssh** command using a hostname*

username on remote computer

Hostname of remote computer

Notice how the prompt changes on the remote computer

```
/home/cis90/simben $ ssh cis90@p06-arwen
cis90@p06-arwen's password:
Welcome to Linux Mint 15 Olivia (GNU/Linux 3.8.0-26-generic x86_64)

Welcome to Linux Mint
 * Documentation:  http://www.linuxmint.com
Last login: Sun Sep  8 09:52:00 2013
cis90@p06-arwen:~ >
```

*Note: You can also **ssh** into the same computer you are currently using for an additional session.*

How do I log into another computer system?

*Method 1: The **ssh** command using am IP address*

username on remote computer

IP address of remote computer

```
/home/cis90/simben $ ssh cis90@172.20.4.34
cis90@172.20.4.34's password:
Welcome to Ubuntu 12.04.1 LTS (GNU/Linux 3.2.0-29-generic x86_64)

 * Documentation:  https://help.ubuntu.com/

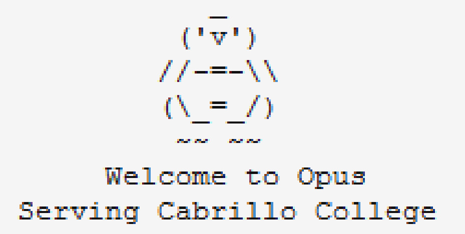
361 packages can be updated.
109 updates are security updates.

Last login: Wed Feb 20 17:26:25 2013 from opus-ii.cabrillo.edu
cis90@frodo-108:~$
```

Notice how the prompt changes on the remote computer

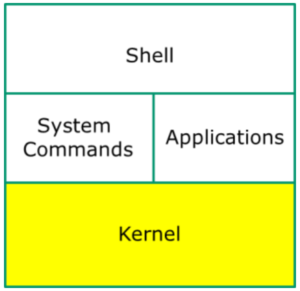
What is the name of the computer I'm interacting with?

```
/home/cis90/simben $ hostname
opus-ii.cis.cabrillo.edu
```



```
           _
         ('v')
        //-=-\\
        (\_=_/)
         ~~ ~~
    Welcome to Opus
Serving Cabrillo College
```

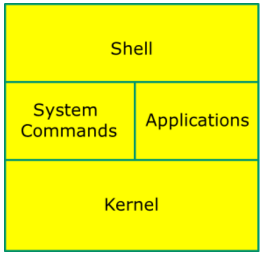
What kernel am I running on?



```
/home/cis90/simben $ uname
Linux
```

The **uname** command (with no arguments) outputs the name of the operating system kernel

What "distro" has been installed?



```
/home/cis90/simben $ cat /etc/issue
CentOS release 6.2 (Final)
Kernel \r on \l

/home/cis90/simben $ cat /etc/*-release
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
```

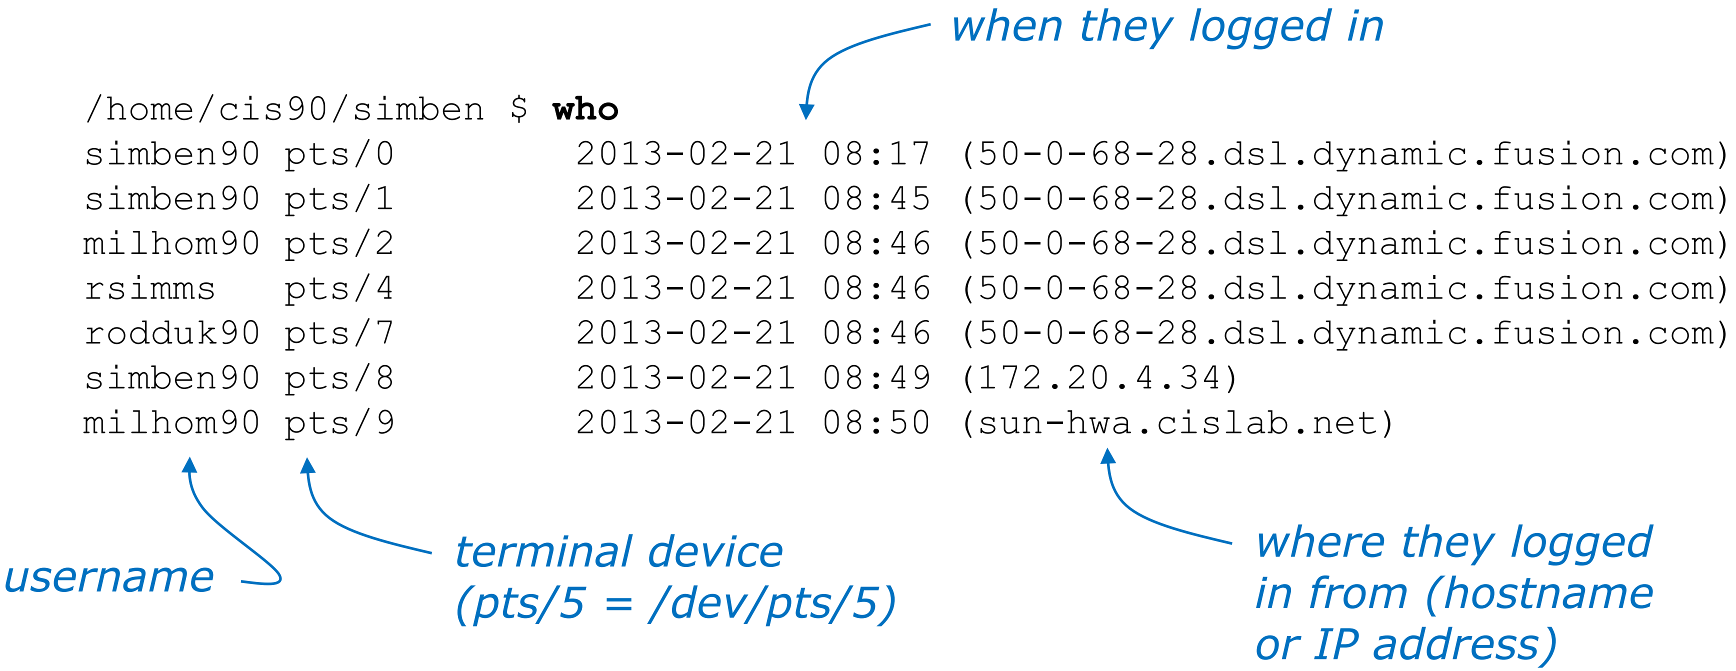
Catting out these files *usually* will show the distro name

What terminal device am I using?

```
/home/cis90/simben $ tty
/dev/pts/5
```

The **terminal type** is not the same as the **terminal device**

Who else is logged in and from where?



```
/home/cis90/simben $ who
simben90 pts/0        2013-02-21 08:17 (50-0-68-28.dsl.dynamic.fusion.com)
simben90 pts/1        2013-02-21 08:45 (50-0-68-28.dsl.dynamic.fusion.com)
milhom90 pts/2        2013-02-21 08:46 (50-0-68-28.dsl.dynamic.fusion.com)
rsimms   pts/4        2013-02-21 08:46 (50-0-68-28.dsl.dynamic.fusion.com)
rodduk90 pts/7        2013-02-21 08:46 (50-0-68-28.dsl.dynamic.fusion.com)
simben90 pts/8        2013-02-21 08:49 (172.20.4.34)
milhom90 pts/9        2013-02-21 08:50 (sun-hwa.cislab.net)
```

when they logged in

username

terminal device (pts/5 = /dev/pts/5)

where they logged in from (hostname or IP address)

The who command shows who is logged in, their terminal device, when they logged in and from where they logged in

Which is my login session?

```
/home/cis90/simben $ who
simben90 pts/0        2013-02-21 08:17 (50-0-68-28.dsl.dynamic.fusion.com)
simben90 pts/1        2013-02-21 08:45 (50-0-68-28.dsl.dynamic.fusion.com)

Terminal type? [xterm]
Terminal type is xterm.
/home/cis90/simben $
```

Answer: xterm

We have the answer already!

What is the hostname of the computer I’m using?

```
/home/cis90/simben $
```

What is the hostname of the computer I’m using?

```
/home/cis90/simben $
/home/cis90/simben $ hostname
opus-ii.cabrillo.edu
/home/cis90/simben $
```

Answer: opus-ii.cabrillo.edu

*Use the **hostname** command to find out*

What is the name of the OS (operating System) kernel?

```
/home/cis90/simben $
```

What is the name of the OS (operating System) kernel?

```
/home/cis90/simben $
/home/cis90/simben $ uname
Linux
/home/cis90/simben $
```

*Use the **uname** command to find out*

Answer: Linux

What is the name of the Linux Distribution being run?

```
/home/cis90/simben $
```

What is the name of the Linux Distribution being run?

```
/home/cis90/simben $ cat /etc/issue
CentOS release 6.2 (Final)
Kernel \r on \l

/home/cis90/simben $ cat /etc/*-release
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
CentOS release 6.2 (Final)
/home/cis90/simben $
```

Answer: CentOS

*Use either **cat /etc/issue** or **cat /etc/*-release** to find out*

What is my username and uid (user ID number)?

```
/home/cis90/simben $
```

What is my username and uid (user ID number)?

```
/home/cis90/simben $
/home/cis90/simben $ id
uid=1001(simben90) gid=190(cis90)
groups=190(cis90),100(users)
context=unconfined_u:unconfined_r:unconfined_t:s0-s0:c0.c1023
/home/cis90/simben $
```

Answer: username=simben90 and the uid=1001

*Use the **id** command to find out*

What is the name of the shell I’m using?

```
/home/cis90/simben $
```

What is the name of the shell I'm using?

```
/home/cis90/simben $
/home/cis90/simben $ ps
  PID TTY          TIME CMD
28237 pts/0    00:00:00 bash
28752 pts/0    00:00:00 ps
/home/cis90/simben $
```

Answer: bash

*Use the **ps** command to find out.*

We will soon learn another command for doing this.
