SquirrelMail Reference Implementation (132)

This Howto documents the implementation of the SquirrelMail MUA (Mail User Agent) on a CentOS 5.2 Virtual Machine. SquirrelMail will use the Apache web server to serve up the MUA user interface and a MySQL database to store the address book and user preferences. phpMyAdmin is installed for viewing the MySQL database.

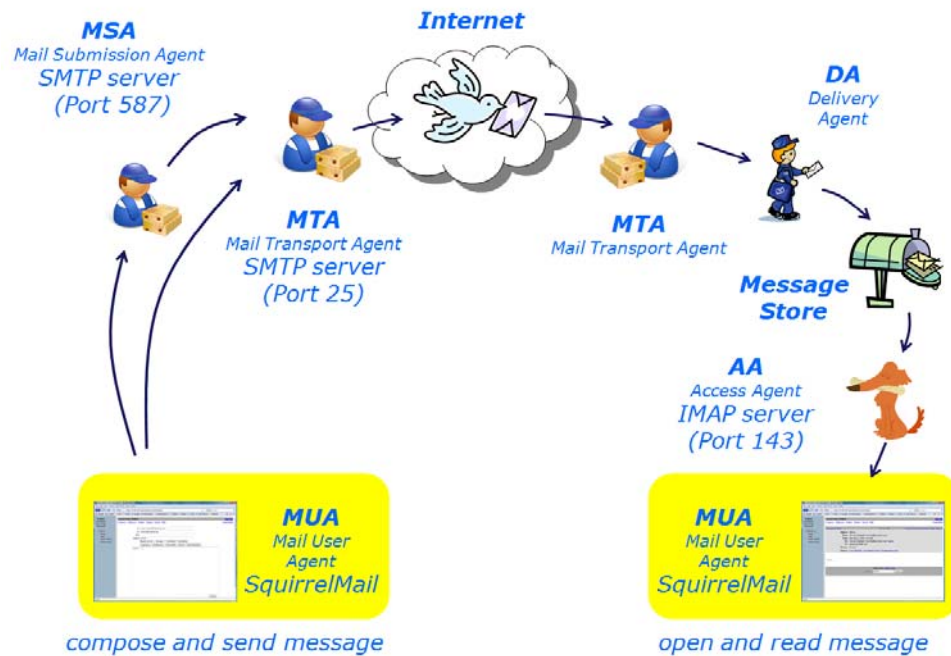

.1XX is based on your station number and the IP Table in the Appendix
N=1 for the classroom and N=4 for the CIS lab or CTC

Supplies

VM: Arwen
OS: CentOS 5.2
Virtualization: VMWare Server 1.08

Arwen should be created with a default installation of CentOS 5.2 and configured to start in run level 3. VMware Tools should be installed.

Prerequisites

You must have access to a SMTP and IMAP server with a working mail user/password. This information is available from your ISP

IMAP server: _____
 username: _____
 password: _____
 SMTP server: _____

Verify the information above with the Evolution MUA (Mail User Agent) on the Arwen VM or any other MUA of your choice.

Dreamhost.com ISP Mail server used for IMAP server:

```
[root@arwen ~]# host mail.hayrocket.com
mail.hayrocket.com has address 208.113.200.50
mail.hayrocket.com mail is handled by 0
mx2.balanced.spacey.mail.dreamhost.com.
mail.hayrocket.com mail is handled by 0
mx1.balanced.spacey.mail.dreamhost.com.

Cruzio ISP server used for SMTP server:

```
[root@arwen ~]# host mx.cruzio.com
mx.cruzio.com is an alias for mail.cruzio.com.
mail.cruzio.com has address 63.249.95.37
[root@arwen ~]#
```

The screenshot displays the DreamHost Web Panel interface for managing email. The browser window title is "DreamHost Web Panel > Mail: Manage Email - Mozilla Firefox". The URL is "https://panel.dreamhost.com/index.cgi?tree=mail.addresses&". The page header shows the user "Hi, Richard! (Member since March 2007)" and the current time "13:01 Pacific Time".

The main content area is titled "Manage Email" and includes a "HELP IS ON" button and an "Account Status" link. Below this, there is an "Email Management" section with instructions: "Create, edit, or delete any email addresses hosted on your DreamHost account." and a note: "Note: You should always have a valid postmaster@yourdomain.com address or some domains may not accept email from you."

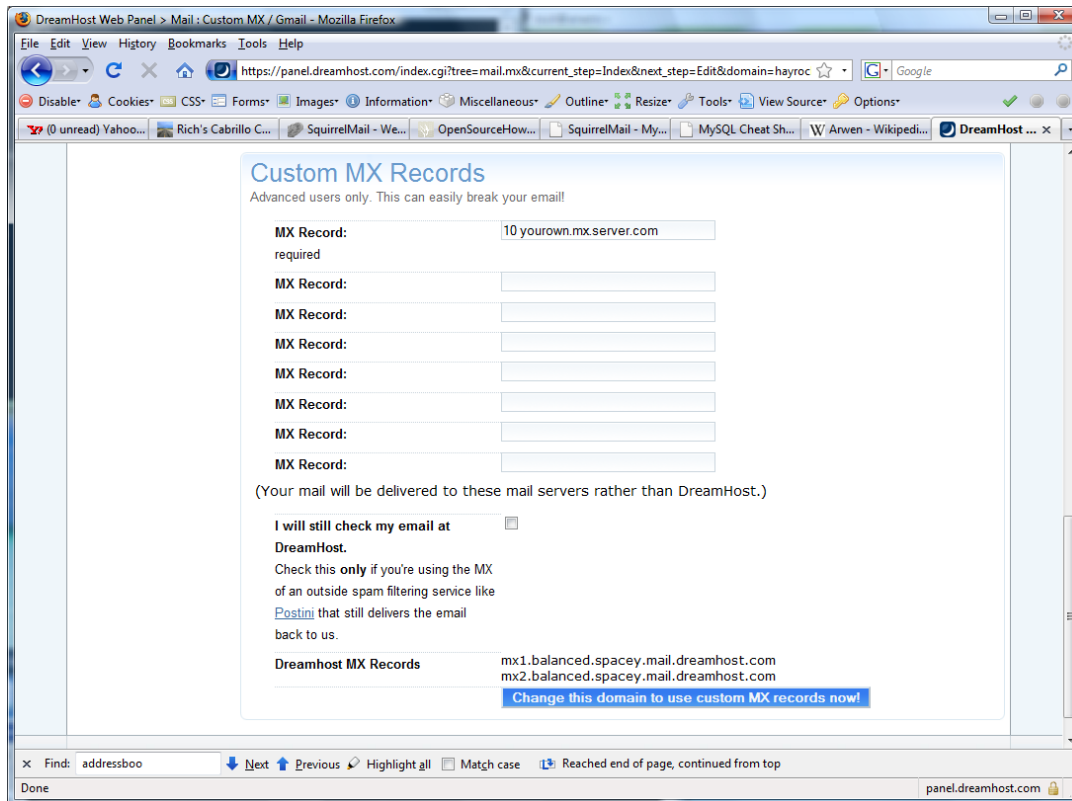

The "Email addresses" section features two buttons: "Create New Email Address" and "Bulk-Edit Forwarding-Only Addresses". Below these, there is a "Show these domains:" section with a dropdown menu containing "acsgames.com", "hayrocket.com", and "simms-teach.com". There are links to "enlarge select box" and "shrink select box", and a "Show Selected Domains" button.

The "Mailbox" section displays a table of existing mailboxes:

Mailbox	Also forwards to:	Actions
arwen@hayrocket.com "Arwen" mailbox manager <10 MB / 200 MB (0%)	There are no additional forwards; messages are only delivered to this mailbox.	Edit Delete
rich@hayrocket.com "Rich Simms" mailbox manager 20689 MB / 398336 MB (5%)*	There are no additional forwards; messages are only delivered to this mailbox.	Edit Delete

* includes website disk usage

The footer of the page shows "Done" and "panel.dreamhost.com".

Check /etc/php.ini settings (<http://squirrelmail.org/docs/admin/admin-3.html>)

- **register_globals off** - This is a dangerous setting when enabled, and is not generally needed for most recent PHP applications. We no longer release security advisories for issues only exploitable with this setting turned on because it has long been a well-known weakness in PHP (and has been removed from PHP 6). Note that you can easily enable it only for a single legacy application that may require it while keeping the default off for the rest of your applications.
- **magic_quotes_{runtime, gpc, sybase} off** - SquirrelMail may work with any of these turned on, but if you experience stray backslashes in your mail or other strange behaviour, it may be advisable to turn them off.
- **file_uploads on** - This is needed if your users want to attach files to their emails.
- **safe_mode on or off** - Turning safe mode on in SquirrelMail's case is not much more secure than having it off. When it is enabled, incompatibilities with some functionality may arise (see our [safe mode notes](#)).

Check php.ini settings:

```
[root@arwen ~]# cat /etc/php.ini | grep "register_globals "
; - register_globals = Off          [Security, Performance]
; Note that register_globals is going to be deprecated (i.e., turned off

If you want to store your users address book details in a database then you need to set this DSN to a valid value. The format for this is:

```
mysql://user:pass@hostname/dbname
```

Where mysql can be one of the databases PHP supports, the most common of these are mysql, msql and pgsq.

Please ensure proper permissions for config.php when including

sensitive passwords.

If the DSN is left empty (hit space and then return) the database related code for address books will not be used.

About

phpMyAdmin is a free software tool written in **PHP** intended to handle the administration of **MySQL** over the World Wide Web. phpMyAdmin supports a wide range of operations with MySQL. The most frequently used operations are supported by the user interface (managing databases, tables, fields, relations, indexes, users, permissions, etc), while you still have the ability to directly execute any SQL statement.

phpMyAdmin comes with a wide range of **documentation** and users are welcome to update **our wiki pages** to share ideas and howtos for various operations. The **phpMyAdmin team** will try to help you if you face any problem, you can use **variety of support channels** to get help.

phpMyAdmin:

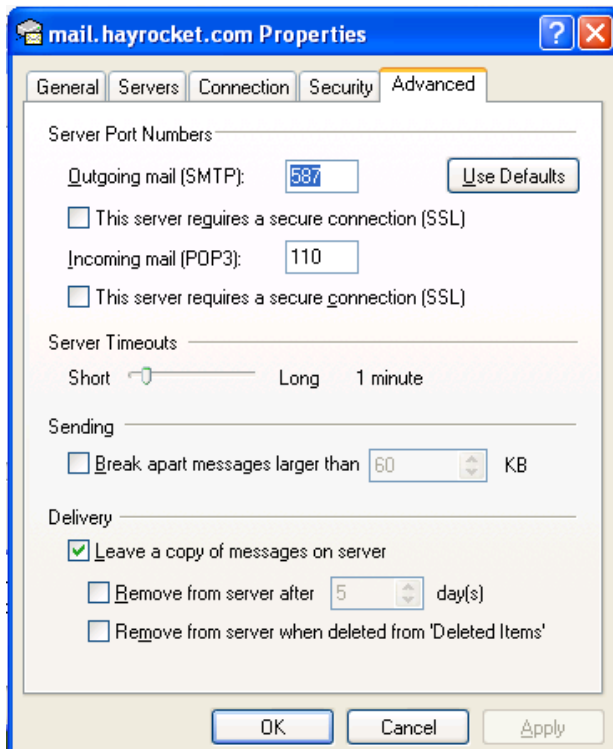

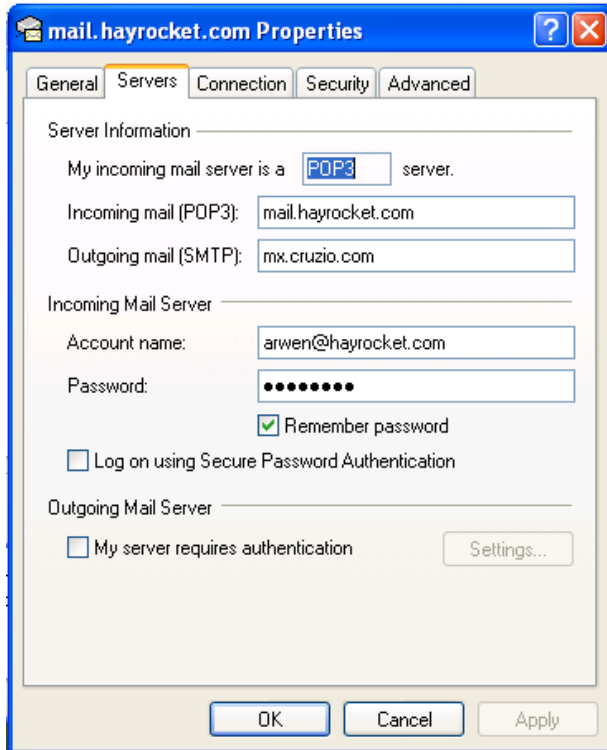

Warning on login page: Cannot load mcrypt extension

The screenshot shows the phpMyAdmin login interface. At the top, it says "Welcome to phpMyAdmin". Below that is a "Language" dropdown menu set to "English (utf-8)". Underneath is a "Log in" section with "Username:" and "Password:" labels, input fields containing "root" and "*****" respectively, and a "Go" button. At the bottom, there is a yellow warning box with a red triangle icon and the text: "Cannot load mcrypt extension. Please check your PHP configuration."

Solution: `yum install php-mcrypt`

Appendix - William's Configuration

Used Outlook Express on William to troubleshoot smtp send problem. Could not access the smtp server mail.hayrocket.com port 25. Had to switch to mx.cruzio.com port 587. This may be done by Cruzio to put a lid on spammers.

William send error

The connection to the server has failed. Account: 'mail.hayrocket.com', Server: 'mail.hayrocket.com', Protocol: SMTP, Port: 25, Secure(SSL): No, Socket Error: 10060, Error Number: 0x800CCC0E

You are on an ISP that blocks their users using any SMTP server other than their own. Your solution is as follows:

To set up your ISP's SMTP servers for your outgoing email you must click on your account settings in the email client you are using (Outlook Express, Eudora, Netscape etc.)

In the SMTP (outgoing mail server) field you will enter whatever your dial up or direct access ISP's SMTP server is as your SMTP server. You must then enter your ISP's username and password for that mail server.

In Outlook Express it is at the bottom of that same tab. You must uncheck 'My server requires authentication' and click on 'settings' to enter your ISP's username and password.

Your email will still be from your own domain name, the only difference is in the way it is routed throughout the Internet. Instead of being sent through our servers it is processed through your ISP's servers. This allows your ISP to monitor its users.

Solution: I had to use Cruzio's smtp server with port 587 instead of hayrocket smtp server port 25 to fix this.

Appendix - Used 'Other' settings from file below for dreamhost IMAP server

Note: 'hmailserver' works with dreamhost.com imap server

```

Preset is used for Mercury Mail Transport System. Available since 1.5.0 and 1.4.6

Free email server for Win32 and Netware.

Tested Win32 v.4.01b

CAPABILITY IMAP4rev1 X-MERCURY

PERMANENTFLAGS (\Deleted \Draft \Seen \Answered)

Comments:

- * Server side sorting and threading are not supported.
- * Message flags are not supported.
- * IMAP folders can store messages _or_ other folders.
- * Supports STARTTLS, if configured.
- * May have issues with 8bit IMAP folder names.

Site URL: <http://www.pmail.com>

```
imap_server_type = mercury32  
default_folder_prefix = <none> (is set to empty string)  
trash_folder = Trash  
sent_folder = Sent

show_contain_subfolders_option = true  
optional_delimiter = detect  
delete_folder = true  
force_username_lowercase = true
```

```
-----  
'dovecot' settings:  
-----
```

Preset used for Dovecot Secure IMAP server. Available since 1.5.1 and 1.4.6.

There is no code specific to Dovecot IMAP server. Preset provides only a quick

way to set correct folder settings.

Tested v.0.99.14

```
CAPABILITY IMAP4rev1 SORT THREAD=REFERENCES MULTIAPPEND UNSELECT LITERAL+
IDLE
```

```
CHILDREN LISTTEXT LIST-SUBSCRIBED NAMESPACE
```

```
PERMANENTFLAGS (\Answered \Flagged \Deleted \Seen \Draft *)
```

IMAP server supports server side sorting and threading.

Site URL: <http://www.dovecot.org>

```
imap_server_type = dovecot
default_folder_prefix = <none> (is set to empty string)
trash_folder = Trash
sent_folder = Sent
draft_folder = Drafts
show_prefix_option = false
default_sub_of_inbox = false
show_contain_subfolders_option = false

```

```
PERMANENTFLAGS (\Answered \Flagged \Deleted \Seen \Draft) - 1.2.13
PERMANENTFLAGS (\Answered \Flagged \Deleted \Seen \Draft *) - 1.3.4
```

IMAP server does not support server side sorting and threading. Plain text logins are disabled by default. Due to available storage backend configuration options it is impossible to create single preset, which covers all setups.

Site URL: <http://www.bincimap.org>

```
* Default (1.2.13) configuration with Maildir++ depot and / delimiter
