Partitions, File Systems and Mounts (121)

Red Hat 9 has been installed into a VM. There is some free disk space at the end of the 1st 5 GB drive. There is also an empty 2nd 2GB drive. An ext2 file system will be added to the end of the 1st drive and an ext3 file system into a logical partition on the 2nd drive. A primary partition will not be put on the 2nd drive to demonstrate how Linux numbers partitions.

Requirements:

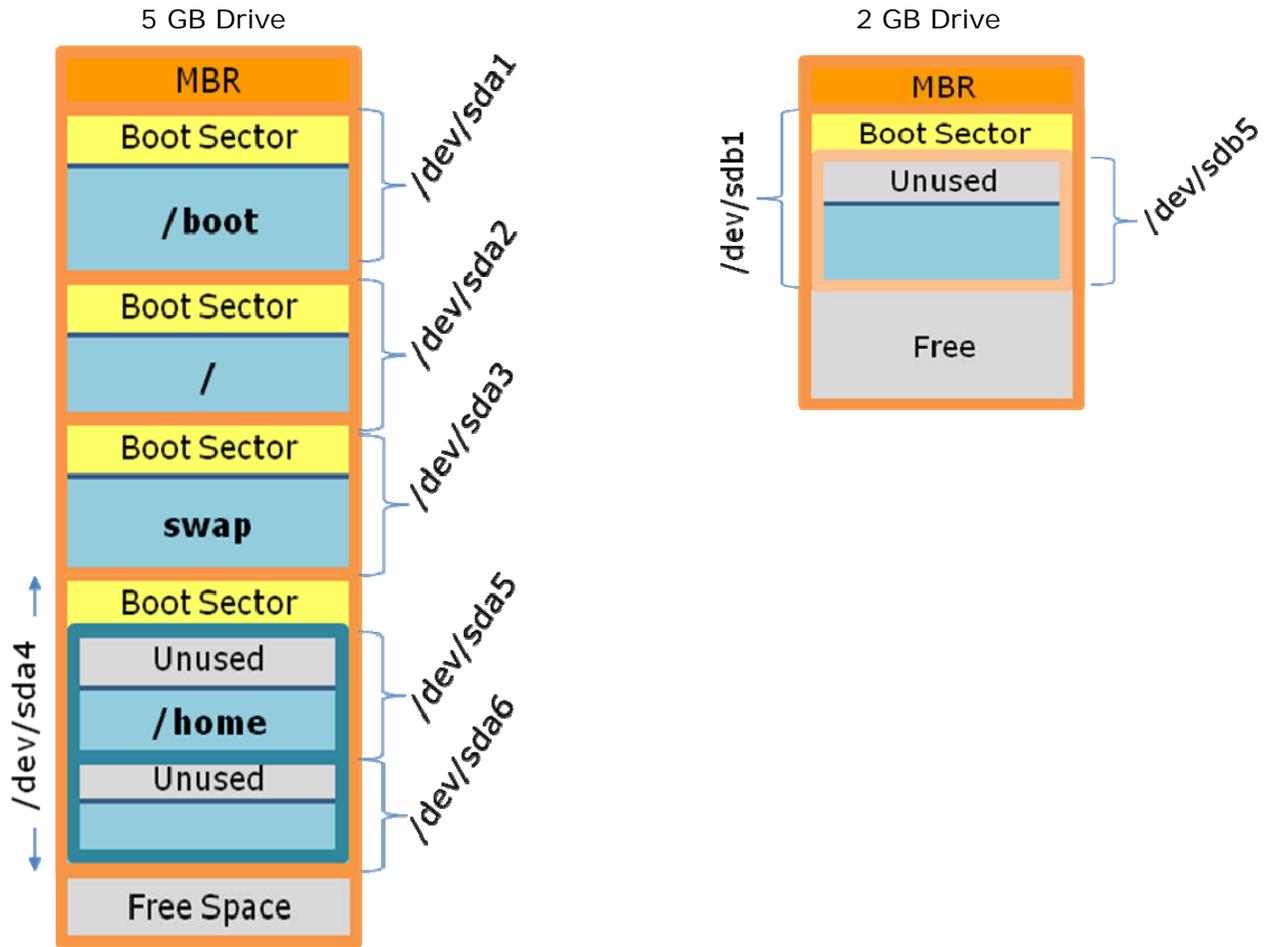

- VM made in Lesson 2: homer
- VMWare Server 1.05
